As you know, the NSE6_FSW-7.2 certificate is hard to get for most people. But our NSE6_FSW-7.2 study guide will offer you the most professional guidance. As old saying goes, opportunities are always for those who prepare themselves well. In the end, you will easily pass the NSE6_FSW-7.2 Exam through our assistance. Then you will find that your work ability is elevated greatly by studying our NSE6_FSW-7.2 actual exam. In the end, you will become an excellent talent.

Fortinet NSE6_FSW-7.2 (Fortinet NSE 6 - FortiSwitch 7.2) exam is a certification program designed to test the ability of network security professionals to manage and configure Fortinet FortiSwitch products. NSE6_FSW-7.2 exam is the latest in a series of certifications offered by Fortinet, a global provider of network security solutions. Fortinet NSE 6 - FortiSwitch 7.2 certification program is designed to equip network security professionals with the skills and knowledge necessary to manage and secure network infrastructure using Fortinet FortiSwitch.

Fortinet NSE6_FSW-7.2 or Fortinet NSE 6 - FortiSwitch 7.2 is an advanced certification exam designed by Fortinet for network professionals. NSE6_FSW-7.2 exam is intended to verify the candidate's knowledge and skills related to the FortiSwitch product family.

NSE6_FSW-7.2 Practice Guide, NSE6_FSW-7.2 Latest Test Answers

The pass rate is 98.75% for NSE6_FSW-7.2 learning materials, and we will help you pass the exam just one time if you choose us. In order to build up your confidence for NSE6_FSW-7.2 training materials, we are pass guarantee and money back guarantee, if you fail to pass the exam, we will give you full refund. In addition, you can receive the download link and password within ten minutes for NSE6_FSW-7.2 Training Materials, if you don't receive, you can contact with us, and we will solve this problem for you immediately. We offer you free update for 365 days for you, and the update version for NSE6_FSW-7.2 exam materials will be sent to your email automatically.

Fortinet NSE6_FSW-7.2 (FortiSwitch 7.2) Certification Exam is an industry-recognized certification that is highly valued by employers and IT professionals. Fortinet NSE 6 - FortiSwitch 7.2 certification exam is designed for network security professionals, including network administrators, security engineers, and IT consultants who want to enhance their skills and knowledge in FortiSwitch solutions. NSE6_FSW-7.2 Exam is also suitable for professionals who want to specialize in network security and gain expertise in FortiSwitch solutions.

Fortinet NSE 6 - FortiSwitch 7.2 Sample Questions (Q37-Q42):

NEW QUESTION # 37

Refer to the diagnostic output:

```
# diagnose sniffer packet __port_23 "4" 4
interfaces=[__port_23]
filters=[]
pcap_lookupnet: __port_23: no IPv4 address assigned
2.100771 __port_23 -- 802.1Q vlan#4094 P0 -- Ether type 0800 printer havn't been added to sniffer
2.188294 __port_23 -- 802.1Q vlan#4094 P0 -- arp 194 chassis 4 04:d5:90:c2:fa:d4 port subtype 5: 'port1' ttl 120 system 'Core-1'
```

What makes the use of the sniffer command on the FortiSwitch CLI unreliable on __port_23?

- A. Only untagged VLAN traffic can be captured.
- B. The switch port might be used as a trunk member.
- C. Just the port egress payloads are printed on CLI.
- **D. The types of packets captured is limited.**

Answer: D

NEW QUESTION # 38

How is traffic routed on FortiSwitch?

- A. ASIC hardware routing can only handle dynamic routing, if supported.
- B. Hardware-based routing on FortiSwitch is handled by the CPU.
- **C. Layer 3 routing can be configured on FortiSwitch, while managed by FortiGate.**
- D. FortiSwitch looks up the hardware routing table and then the forwarding information base (FIB).

Answer: C

Explanation:

Layer 3 routing can be configured on FortiSwitch, while managed by FortiGate (D): FortiSwitch, when managed by FortiGate, supports Layer 3 routing capabilities. This allows for routing between VLANs directly on the switch, enhancing network efficiency by reducing the need to pass traffic through higher network layers for inter-VLAN communication. This configuration enables more sophisticated network setups and efficient routing directly at the switch level.

NEW QUESTION # 39

Exhibit.

```

config system global
    set auto-isl enable
    set daily-restart enable
    set dst enable
    set fortilink-auto-discovery enable
    set hostname "core-1"
    set language English
    set switch-mgmt-mode fortilink
    set timezone 12

```

You need to manage three FortiSwitch devices using a FortiGate device. Two of the FortiSwitch devices initiated a reboot after the authorization process. However, the FortiSwitch device with the configuration shown in the exhibit, did not reboot. All three devices completed FortiLink management authorization successfully.

Why did the FortiSwitch device shown in the exhibit not reboot to complete the authorization process?

The management mode was set to use FortiLink mode.

- A. The management mode was set to use FortiLink mode.
- B. The FortiSwitch device is scheduled to reboot as part the authorization process
- C. The system time is not in-sync and is using a non-default value
- D. Switch auto-discovery is enabled.

Answer: A

NEW QUESTION # 40

Which interfaces on FortiSwitch send out FortiLink discovery frames by default in order to detect a FortiGate with an enabled FortiLink interface?

- A. The last four switch ports on FortiSwitch have auto-discovery enabled by default.
- B. The ports with auto-discovery enabled by default are dependent upon the FortiSwitch model.
- C. No ports are enabled by default for auto-discovery. This must be configured under config switch interface.
- D. All ports have auto-discovery enabled by default.

Answer: D

Explanation:

Fortinet FortiLink Protocol: The FortiLink protocol is Fortinet's proprietary mechanism for managing FortiSwitch units from a FortiGate firewall. It simplifies configuration and security policy enforcement across the connected network devices.

Auto-Discovery: FortiLink's auto-discovery feature means that by default, all ports on a FortiSwitch will actively send out discovery frames. This allows them to locate a FortiGate device that has a FortiLink interface enabled, streamlining the device management process.

No Configuration Needed: You don't have to manually configure individual ports for FortiLink discovery on FortiSwitch devices.

Reference

FortiSwitchOS FortiLink Guide (FortiSwitch Devices Managed by FortiOS 7.2): Refer to pages 13 and 14 for details on zero-touch management and FortiLink configuration. NEW QUESTION # 41

Exhibit.

FORTINET

LoopGuard-setup

LoopGuard-setup

```
# diagnose switch-controller switch-info loop-guard S108EF4N17000029:
```

Portname	State	Status	Timeout (m)	MAC
port1	enabled	Triggered	2	0
port2	disabled	-	-	-
port3	disabled	-	-	-

port1 and port2 are the only ports configured with the same native VLAN 10.
What are two reasons that can trigger port1 to shut down? (Choose two.)

- A. Oport1 was shut down by loop guard protection.
- B. STP triggered a loop and applied loop guard protection on port1.
- C. An endpoint sent BPDU on port1 it received from another interface.
- D. Loop guard frame sourced from port 1 was received VLAN 10 ports.

Answer: A,D
