Pass Fortinet FCSS_EFW_AD-7.4 Exam with PassQuestion

FCSS_EFW_AD-7.4 questions and answers in the first attempt.

<https://www.passquestion.com/>

1 / 10

In order to ensure the quality of our FCSS_EFW_AD-7.6 preparation materials, we specially invited experienced team of experts to write them. The content of our FCSS_EFW_AD-7.6 practice engine comes from a careful analysis and summary of previous exam syllabus, so that you can accurately grasp the core test sites. At the same time, our professional experts are keeping a close eye on the changes of the exam questions and answers. So that our FCSS_EFW_AD-7.6 Study Guide can be the latest and most accurate.

Fortinet FCSS_EFW_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	System Configuration: This section of the exam measures the skills of a Network Security Architect and covers the implementation and integration of core Fortinet infrastructure components. It includes deploying the Security Fabric, enabling hardware acceleration, configuring high availability operational modes, and designing enterprise networks utilizing VLANs and VDOM technologies to meet specific organizational requirements.
Topic 2	Central Management: This section of the exam measures the skills of a Security Operations Manager and covers the implementation of centralized management systems for coordinated control and oversight of distributed Fortinet security infrastructures across enterprise environments.

Topic 3	• Security Profiles: This section of the exam measures the skills of a Threat Prevention Specialist and covers the configuration and management of comprehensive security profiling systems. It includes implementing SSL • SSH inspection, combining web filtering and application control mechanisms, integrating intrusion prevention systems, and utilizing the Internet Service Database to create layered security protections for organizational networks.
Topic 4	• Routing: This section of the exam measures the skills of a Network Infrastructure Engineer and covers the implementation of dynamic routing protocols for enterprise network traffic management. It includes configuring both OSPF and BGP routing protocols to ensure efficient and reliable data transmission across complex organizational networks.
Topic 5	• VPN: This section of the exam measures the skills of a VPN Solutions Engineer and covers the implementation of various virtual private network technologies. It includes configuring IPsec VPN using IKE version 2 protocols and implementing Automatic Discovery VPN solutions to establish on-demand secure tunnels between multiple sites within an enterprise network infrastructure.

FCSS_EFW_AD-7.6 Exam Bootcamp & FCSS_EFW_AD-7.6 Dumps Torrent & FCSS_EFW_AD-7.6 Exam Simulation

Each of the Lead2PassExam Fortinet FCSS_EFW_AD-7.6 exam dumps formats excels in its way and carries actual FCSS - Enterprise Firewall 7.6 Administrator (FCSS_EFW_AD-7.6) exam questions for optimal preparation. All of these FCSS - Enterprise Firewall 7.6 Administrator (FCSS_EFW_AD-7.6) practice question formats are easy to use and extremely convenient such that even newbies find them simple.

Fortinet FCSS - Enterprise Firewall 7.6 Administrator Sample Questions (Q26-Q31):

NEW QUESTION # 26

Refer to the exhibit, which shows a hub and spokes deployment.

An administrator is deploying several spokes, including the BGP configuration for the spokes to connect to the hub. Which two commands allow the administrator to minimize the configuration? (Choose two.)

- A. neighbor-range
- B. ibgp-enforce-multihop
- C. neighbor-group
- D. route-reflector-client

Answer: A,C

Explanation:

neighbor-group:

This command is used to group multiple BGP neighbors with the same configuration, reducing redundant configuration.

Instead of defining individual BGP settings for each spoke, the administrator can create a neighbor-group and apply the same policies, reducing manual work.

neighbor-range:

This command allows the configuration of a range of neighbor IPs dynamically, reducing the need to manually define each spoke neighbor.

It automatically adds BGP neighbors that match a given prefix, simplifying deployment.

NEW QUESTION # 27

Refer to the exhibit, which shows a network diagram.

An administrator would like to modify the MED value advertised from FortiGate_1 to a BGP neighbor in the autonomous system 30.

What must the administrator configure on FortiGate_1 to implement this?

- A. network-import-check
- B. prefix-list-out
- C. distribute-list-out
- **D. route-map-out**

Answer: D

Explanation:

The Multi-Exit Discriminator (MED) is a BGP attribute used to influence the preferred path for incoming traffic from an external autonomous system (AS). The diagram shows that FortiGate_1 advertises MED 200, while FortiGate_2 advertises MED 300, meaning the ISP will prefer the route through FortiGate_1 because a lower MED is preferred in BGP.

To modify the MED value on FortiGate_1 for routes advertised to AS 30, the administrator must configure a route-map-out. A route map can match specific routes and set the MED value before sending them to the BGP neighbor.

NEW QUESTION # 28

Refer to the exhibit, which contains a partial VPN configuration.

```

config vpn ipsec phase1-interface
edit tunnel
set type dynamic
set interface "port1"
set ike-version 2
set keylife 28800
set peertype any
set net-device disable
set proposal aes128-sha256 aes256-sha256
set dpd on-idle
set add-route enable
set psksecret fortinet
next
end

```

What can you conclude from this VPN IPsec phase 1 configuration?

- A. Peer IDs are unencrypted and exposed, creating a security risk.
- **B. This configuration is the best for networks with regular traffic intervals, providing a balance between connectivity assurance and resource utilization.**
- C. A separate interface is created for each dial-up tunnel, which can be slower and more resource intensive, especially in large networks.
- D. FortiGate will not add a route to its routing or forwarding information base when the dynamic tunnel is negotiated.

Answer: B

Explanation:

This IPsec Phase 1 configuration defines a dynamic VPN tunnel that can accept connections from multiple peers. The settings chosen here suggest a configuration optimized for networks with intermittent traffic patterns while ensuring resources are used efficiently.

Key configurations and their impact:

set type dynamic # This allows multiple peers to establish connections dynamically without needing predefined IP addresses.
 # set ike-version 2 # Uses IKEv2, which is more efficient and supports features like EAP authentication and reduced rekeying overhead.

set dpd on-idle # Dead Peer Detection (DPD) is triggered only when the tunnel is idle, reducing unnecessary keep-alive packets and improving resource utilization.

set add-route enable # FortiGate automatically adds the route to the routing table when the tunnel is established, ensuring connectivity when needed.

set proposal aes128-sha256 aes256-sha256 # Uses strong encryption and hashing algorithms, ensuring a secure connection.

set keylife 28800 # Sets a longer key lifetime (8 hours), reducing the frequency of rekeying, which is beneficial for stable connections.

Because DPD is set to on-idle, the tunnel will not constantly send keep-alive messages but will still ensure connectivity when traffic is detected. This makes the configuration ideal for networks with regular but non-continuous traffic, balancing security and resource efficiency.

NEW QUESTION # 29

Refer to the exhibit, which shows a revision history window in the FortiManager device layer.

Configuration Revision History					
View Config View Install Log Revision Diff Retrieve Config More Search...					
ID	Date & Time	Name	Created by	Installation	Comments
✓ 10	2024-08-21 14:30:54		script_manager	Retrieved	
9	2024-08-21 14:02:55	AutoUpdate	AutoUpdate	Auto Updated	Autoretrieve merged config
8	2024-06-24 04:52:47	DCFW	admin	Installed	

The IT team is trying to identify the administrator responsible for the most recent update in the FortiGate device database. Which conclusion can you draw about this scenario?

- A. This retrieved process was automatically triggered by a Remote FortiGate Directly (via CLI) script.
- B. The user script_manager is an API user from the Fortinet Developer Network (FDN) retrieving a configuration.
- C. To identify the user who created the event, check it on the Configuration and Installation widget on FortiGate within the FortiManager device layer.
- D. Find the user in the FortiManager system logs and use the type=script command to find the administrator user in the user field.

Answer: D

Explanation:

The Configuration Revision History window in FortiManager shows that the most recent configuration change (ID 10) was created by script_manager with the action Retrieved.

Since script_manager is a system-level script execution user, the IT team needs to find who actually triggered this script. This can be done by:

Checking the FortiManager system logs for script execution events.

Using the type=script filter to locate the administrator associated with the script execution.

NEW QUESTION # 30

Refer to the exhibit, which shows an ADVPN network.

The client behind Spoke-1 generates traffic to the device located behind Spoke-2. What is the first message that the hub sends to Spoke-1 to bring up the dynamic tunnel?

- A. Shortcut forward
- B. Shortcut query
- C. Shortcut offer

- D. Shortcut reply

Answer: C

Explanation:

In an ADVPN (Auto-Discovery VPN) network, a dynamic VPN tunnel is established on-demand between spokes to optimize traffic flow and reduce latency.

Process:

1. Traffic Initiation:

A client behind Spoke-1 sends traffic to a device behind Spoke-2.

The traffic initially flows through the hub, following the pre-established overlay tunnel.

2. Hub Detection:

The hub detects that Spoke-1 is communicating with Spoke-2 and determines that a direct shortcut tunnel between the spokes can optimize the connection.

FOF

lead2passexam.com

3. Shortcut Offer:

The hub sends a "Shortcut Offer" message to Spoke-1, informing it that a direct dynamic tunnel to Spoke-2 is possible.

FOF

lead2passexam.com

4. Tunnel Establishment:

Spoke-1 and Spoke-2 then negotiate and establish a direct IPsec tunnel for communication.
