Updated and Error-free Prep4cram Nutanix NCP-DB Exam Questions
Our Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 test torrent was designed by a lot of experts in different area. You will never worry about the quality and pass rate of our study materials, it has been helped thousands of candidates pass their exam successful and helped them find a good job. If you choose our NCP-DB study torrent, we can promise that you will not miss any focus about your exam. There are three different versions to meet customers' needs you can choose the version that is suitable for you to study. If you buy our Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 test torrent, you will have the opportunity to make good use of your scattered time to learn whether you are at home, in the company, at school, or at a metro station.

Don't let outdated study materials hold you back from passing the Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) certification exam. Our platform offers updated NCP-DB exam dumps in three formats - PDF, web-based practice exams, and desktop practice test software - so you can study and prepare anytime, anywhere. With our reliable study materials, you can achieve your career goals and land a high-paying job in the technology industry. Don't waste your resources on outdated material - trust our platform to provide you with the actual and updated Nutanix NCP-DB Practice Questions you need to succeed.

Nutanix NCP-DB Exam Questions Answers & NCP-DB Practical Information

The procedures of every step to buy our NCP-DB exam questions are simple and save the clients' time. Because the most clients may be busy in their jobs or other significant things, the time they can spare to learn our NCP-DB study materials is limited and little. But if the clients buy our NCP-DB training quiz they can immediately use our exam products and save their time. It will only take 5 to 10 minutes for us to send the NCP-DB learning guide to you after purchase.

Nutanix NCP-DB Exam Syllabus Topics:

Topic	Details
Topic 1	• Protect NDB-managed Databases Using Time Machine: SLA retention policies, source databases, clones, protection of databases, and Data Access Management (DAM) policies are discussed in this topic.
Topic 2	• Describe NDB Concepts: It defines database and NDB terminology. The topic also explains benefits and features of NDB.

Topic 3	• Monitor Alerts and Storage Usage Within an NDB Implementation: It is all about monitoring alerts and management of storage usage.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 Sample Questions (Q92-Q97):

NEW QUESTION # 92
An administrator needs to deploy a cumulative update (CU) for SQL Server.
What steps would the administrator take to prepare this deployment with NDB?

- A. Apply the patch to the profile VM, delete the existing Software Profile and create a new Software Profile using the profile VM as the source.
- B. Create a new Software Profile version using the CU executable and publishthatversion.
- C. Create a new Software Profile using the CU executable and publish that profile.
- D. Apply the patch to the profile VM, then create a new Software Profile version using the profile VM as the source.

Answer: D

Explanation:
The correct answer is C because it follows the recommended procedure for applying a CU to a SQL Server Software Profile in NDB. By applying the patch to the profile VM, the administrator ensures that the CU is compatible with the existing Software Profile settings and configuration. By creating a new Software Profile version, the administrator preserves the previous version of the Software Profile for rollback purposes and allows the new version to be tested and published. Option A is incorrect because it deletes the existing Software Profile, which may cause data loss and prevent rollback. Option B is incorrect because it does not apply the patch to the profile VM, which may result in errors or inconsistencies in the Software Profile. Option D is incorrect because it creates a new Software Profile instead of a new version, which may cause confusion and duplication.
References: The following sources provide more information about the Software Profile management and patching in NDB:
* Nutanix Database Management & Automation (NDMA) course, Module 5: Patching Databases Using NDB, Lesson 5.2: Creating and Modifying Software Profiles
* Nutanix Certified Professional - Database Automation (NCP-DB) v6.5, Knowledge Objectives, Section 4 - Operate and Maintain an NDB Environment
* Nutanix Database Service (NDB) User Guide, Chapter 5: Patching Databases Using NDB, Section 5.2: Creating and Modifying Software Profiles
* Nutanix Database Service (NDB) User Guide, Chapter 5: Patching Databases Using NDB, Section 5.3: Testing and Publishing Database Patches

NEW QUESTION # 93
An administrator needs to provision multiple database clones from the same source database for different purposes, such as QA and Test/Development. To avoid resource starving, the administrator wants to differentiate VM resources for each department.
What is the most efficient way to accomplish this task?

- A. Create multiple Compute profiles.
- B. Leverage NCM Self Service to deploy database clones.
- C. Generate a playbook to resize database VMs when released.
- D. Use a VM Template for each department.

Answer: A

Explanation:
An administrator needs to provision multiple database clones from the same source database for different purposes (e.g., QA and Test/Development) while avoiding resource starvation by differentiating VM resources for each department. The most efficient way to achieve this is by creating multiple Compute profiles in NDB. Compute profiles define CPU, memory, and other resource allocations for VMs, allowing the administrator to tailor resource limits (e.g., higher resources for QA, lower for Development) and apply them during clone provisioning. This approach is built into NDB, ensuring consistent resource management without manual adjustments.
* Option A (Create multiple Compute profiles) is correct as it provides a scalable and efficient way to allocate resources per department.
* Option B (Leverage NCM Self Service to deploy database clones) is incorrect because Nutanix Cluster Management (NCM)

Self Service is for end-user provisioning, not resource differentiation.
* Option C (Use a VM Template for each department) is incorrect because VM templates are less flexible and not natively integrated with NDB clone provisioning.
* Option D (Generate a playbook to resize database VMs when released) is incorrect because playbooks are for automation, not initial resource allocation, and resizing post-provisioning is less efficient.
This method optimizes resource use across departments.

NEW QUESTION # 94
An administrator needs to distribute NDB management plane components.
Which NDB HA VM needs to be deployed on the same L2 network?

- A. HA Proxy VMs
- B. NDB Agent
- C. API Server
- D. Repository VMs

Answer: A

Explanation:
NDB High Availability (HA) is a feature that ensures the availability and reliability of the NDB management plane components, such as the API Server, the Repository VMs, and the NDB Agents. To enable NDB HA, you need to deploy at least three HA Proxy VMs on the same L2 network as the NDB Server VM. The HA Proxy VMs act as load balancers and health monitors for the NDB management plane components, and they also provide a single endpoint for accessing the NDB APIs and UI. References:
* Nutanix Certified Professional - Database Automation (NCP-DB), Section 2 - Deploy and Configure an NDB Solution
* Database (NCP-DB) Exam Blueprint Guide - Nutanix, Page 7, Objective 2.3
* Nutanix Database Management & Automation (NDMA) course, Module 2, Lesson 2.3 - NDB High Availability

NEW QUESTION # 95
Which NDB HA control plane VM is upgraded first during an NDB upgrade?

- A. Leader NDB API Server
- B. NDB Agent VMs
- C. NDB Server
- D. Leader HAProxy

Answer: A

Explanation:
During an NDB upgrade, the upgrade process follows a specific order to maintain stability and HA. The Leader NDB API Server is upgraded first. This server coordinates API requests and ensures the control plane remains operational. Upgrading the leader first minimizes disruption, as subsequent components (e.g., other API servers, HAProxy) rely on its leadership role. Once the leader is upgraded, the remaining NDB HA control plane VMs (e.g., follower API servers, HAProxy) are updated in sequence.
Other options are incorrect:
* A. NDB Server: Refers to the main NDB instance, not upgraded first.
* C. Leader HAProxy: Upgraded after API servers to maintain load balancing.
* D. NDB Agent VMs: Upgraded last, as they are client-side components.
Thus, the verified answer is B, reflecting the upgrade sequence.

NEW QUESTION # 96

Before registering a database server VM to NDB, what should an administrator use to verify all required software and configuration dependencies?

- A. NCC
- B. Prerequisites script
- C. LCM
- D. Upgrade Software

Answer: B

Explanation:

Before registering a database server VM to NDB, an administrator must verify that all required software (e.g., database engine, OS dependencies) and configuration settings (e.g., WinRM for Windows, SSH for Linux) are in place. NDB provides a prerequisites script, which can be run on the target VM to check these dependencies automatically. This script ensures compatibility and readiness, reducing registration failures.

* Option A (LCM - Lifecycle Manager) is incorrect because LCM is used for cluster upgrades, not VM prerequisite checks.
* Option B (Upgrade Software) is incorrect as it applies to updating existing software, not initial dependency verification.
* Option C (Prerequisites script) is correct as it is the designated tool for pre-registration validation.
* Option D (NCC - Nutanix Cluster Check) is incorrect because NCC checks cluster health, not VM- specific software dependencies.

NEW QUESTION # 97

......

Our service and Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 exam questions are offered to exam candidates who are in demand of our products which are marvelous with the passing rate up to 98 percent and so on. So this result invariably makes our NCP-DB torrent prep the best in the market. We can assure you our NCP-DB test guide will relax the nerves of the exam without charging substantial fees. So we are always very helpful in arranging our Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 exam questions with both high quality and reasonable price. And you can choose them without hesitation. What is more, we give discounts upon occasions and send you the new version of our NCP-DB Test Guide according to the new requirements of the exam for one year from the time you place your order. One of our many privileges offering for exam candidates is the update. So we have received tremendous compliments which in return encourage us to do better. So please keep faithful to our NCP-DB torrent prep and you will prevail in the exam eventually.
