Updated C1000-130 Testkings & Reliable Study C1000-130 Questions

2023 C1000-130 Guide - Authorized C1000-130 Pdf, Valid IBM Cloud Pak for Integration V2021.2 Administration Exam Syllabus

P.S. Free & New C1000-130 dumps are available on Google Drive shared by TestInsides: https://drive.google.com/open?id=1DCySyZZ414BZ-G5XdOkpDfFSE5plPXnC

With the aid of our IBM C1000-130 exam preparation to improve your grade and change your states of life and get amazing changes in career, everything is possible. It all starts from our IBM C1000-130 learning questions. Our IBM C1000-130 training questions are the accumulation of professional knowledge worthy practicing and remembering.

IBM C1000-130 (IBM Cloud Pak for Integration V2021.2 Administration) Certification Exam is designed to test the knowledge and skills of IT professionals in the administration of IBM Cloud Pak for Integration V2021.2. C1000-130 exam is intended for those who have experience in deploying, configuring, and managing IBM Cloud Pak for Integration solutions. It is also recommended for professionals who want to demonstrate their expertise in the field of cloud integration.

>> Updated C1000-130 Testkings <<

100% Pass-Rate Updated C1000-130 Testkings Help You to Get Acquainted with Real C1000-130 Exam Simulation

We have three versions packages of the C1000-130 exam questions to help you comprehensively. Also, all contents are carefully prepared by our researchers. So you needn't to read and memorize the boring reference books of the C1000-130 Exam. Most

people have successfully passed the exam under the assistance of our study materials. So try to trust us. Our C1000-130 study materials will help you generate a wonderful life.

IBM Cloud Pak for Integration V2021.2 Administration Sample Questions (Q107-Q112):

NEW QUESTION # 107
What is the result of issuing the following command?
oc get packagemanifest -n ibm-common-services ibm-common-service-operator
-o*jsonpath='{.status.channels![*].name}'

- A. It returns an operator package manifest in a JSON structure.
- B. It lists available upgrade channels for Cloud Pak for Integration Foundational Services.
- C. It displays the status and names of channels in the default queue manager.
- D. It retrieves a manifest of services packaged in Cloud Pak for Integration operators.

Answer: A

NEW QUESTION # 108
In Cloud Pak for Integration, which user role can replace default Keys and Certificates?

- A. System user
- B. Cluster Manager
- C. Cluster Administrator
- D. Super-user

Answer: C

NEW QUESTION # 109
What is the minimum Red Hat OpenShift version for Cloud Pak for Integration V2021.2?

- A. 4.7.4
- B. 4.7.4
- C. 4.6.2
- D. 4.6.8

Answer: A

Explanation:
IBM Cloud Pak for Integration (CP4I) v2021.2 is designed to run on Red Hat OpenShift Container Platform (OCP). Each version of CP4I has a minimum required OpenShift version to ensure compatibility, performance, and security.
For Cloud Pak for Integration v2021.2, the minimum required OpenShift version is 4.7.4.
Key Considerations for OpenShift Version Requirements:
Compatibility: CP4I components, including IBM MQ, API Connect, App Connect, and Event Streams, require specific OpenShift versions to function properly.
Security & Stability: Newer OpenShift versions include critical security updates and performance improvements essential for enterprise deployments.
Operator Lifecycle Management (OLM): CP4I uses OpenShift Operators, and the correct OpenShift version ensures proper installation and lifecycle management.
IBM's Official Minimum OpenShift Version Requirements for CP4I v2021.2:
Minimum required OpenShift version: 4.7.4
Recommended OpenShift version: 4.8 or later
Why Answer A (4.7.4) is Correct?
IBM officially requires at least OpenShift 4.7.4 for deploying CP4I v2021.2.
OpenShift 4.6.x versions are not supported for CP4I v2021.2.
OpenShift 4.7.4 is the first fully supported version that meets IBM's compatibility requirements.
Explanation of Incorrect Answers:
B . 4.6.8 → Incorrect

OpenShift 4.6.x is not supported for CP4I v2021.2.
IBM Cloud Pak for Integration v2021.1 supported OpenShift 4.6, but v2021.2 requires 4.7.4 or later.
C . 4.7.4 → Correct
This is the minimum required OpenShift version for CP4I v2021.2.
D . 4.6.2 → Incorrect
OpenShift 4.6.2 is outdated and does not meet the minimum version requirement for CP4I v2021.2.

Red Hat OpenShift Version Support Matrix
IBM Cloud Pak for Integration OpenShift Deployment Guide

NEW QUESTION # 110
Given the high availability requirements for a Cloud Pak for Integration deployment, which two components require a quorum for high availability?

- A. Automation Assets
- B. Multi-instance Queue Manager
- C. Application Integration (App Connect)
- D. Event Gateway Service
- E. API Management (API Connect)

Answer: B,E

Explanation:
In IBM Cloud Pak for Integration (CP4I) v2021.2, ensuring high availability (HA) requires certain components to maintain a quorum. A quorum is a mechanism where a majority of nodes or instances must agree on a state to prevent split-brain scenarios and ensure consistency.
Why "Multi-instance Queue Manager" (A) Requires a Quorum?
IBM MQ Multi-instance Queue Manager is designed for high availability.
It runs in an active-standby configuration where a shared storage is required, and a quorum ensures that failover occurs correctly.
If the primary queue manager fails, quorum logic ensures that another instance assumes control without data corruption.
Why "API Management (API Connect)" (B) Requires a Quorum?
API Connect operates in a distributed cluster architecture where multiple components (such as the API Manager, Analytics, and Gateway) work together.
A quorum is required to ensure consistency and avoid conflicts in API configurations across multiple instances.
API Connect uses MongoDB as its backend database, and MongoDB requires a replica set quorum for high availability and failover.
Why Not the Other Options?
Option
Reason for Exclusion
C . Application Integration (App Connect)
While App Connect can be deployed in HA mode, it does not require a quorum. It uses Kubernetes scaling and load balancing instead.
D . Event Gateway Service
Event Gateway is stateless and relies on horizontal scaling rather than quorum-based HA.
E . Automation Assets
This component stores automation-related assets but does not require quorum for HA. It typically relies on persistent storage replication.
Thus, Multi-instance Queue Manager (IBM MQ) and API Management (API Connect) require quorum to ensure high availability in Cloud Pak for Integration.

IBM MQ Multi-instance Queue Manager HA
IBM API Connect High Availability and Quorum
CP4I High Availability Architecture
MongoDB Replica Set Quorum in API Connect

NEW QUESTION # 111
An administrator is using the Storage Suite for Cloud Paks entitlement that they received with their Cloud Pak for Integration (CP4I)

licenses. The administrator has 200 VPC of CP4I and wants to be licensed to use 8TB of OpenShift Container Storage for 3 years. They have not used or allocated any of their Storage Suite entitlement so far.
What actions must be taken with their Storage Suite entitlement?

- A. The Storage Suite entitlement can be used for OCS. however 8TB will require 320 VPCs of CP41
- B. The Storage Suite entitlement already covers the administrator's license needs.
- C. The Storage Suite entitlement covers the administrator's license needs only if the OpenShift cluster is running on IBM Cloud or AWS.
- D. The Storage Suite entitlement only covers IBM Spectrum Scale, Spectrum Virtualize. Spectrum Discover, and Spectrum Protect Plus products, but the licenses can be converted to OCS.

Answer: A

Explanation:
The IBM Storage Suite for Cloud Paks provides storage licensing for various IBM Cloud Pak solutions, including Cloud Pak for Integration (CP4I). It supports multiple storage options, such as IBM Spectrum Scale, IBM Spectrum Virtualize, IBM Spectrum Discover, IBM Spectrum Protect Plus, and OpenShift Container Storage (OCS).
Understanding Licensing Conversion:
IBM licenses CP4I based on Virtual Processor Cores (VPCs).
Storage Suite for Cloud Paks uses a conversion factor:
1 VPC of CP4I provides 25GB of OCS storage entitlement.
To calculate how much CP4I VPC is required for 8TB (8000GB) of OCS:
$\frac{8000GB}{25GB \text{ per VPC}} = 320 \text{ VPCs}$ Since the administrator only has 200 VPCs of CP4I, they do not have enough entitlement to cover the full 8TB of OCS storage. They would need an additional 120 VPCs to fully meet the requirement.
Why Other Options Are Incorrect:
A . The Storage Suite entitlement covers the administrator's license needs only if the OpenShift cluster is running on IBM Cloud or AWS.
Incorrect, because Storage Suite for Cloud Paks can be used on any OpenShift deployment, including on-premises, IBM Cloud, AWS, or other cloud providers.
C . The Storage Suite entitlement already covers the administrator's license needs.
Incorrect, because 200 VPCs of CP4I only provide 5TB (200 × 25GB) of OCS storage, but the administrator needs 8TB.
D . The Storage Suite entitlement only covers IBM Spectrum products, but the licenses can be converted to OCS.
Incorrect, because Storage Suite already includes OpenShift Container Storage (OCS) as part of its licensing model without requiring any conversion.
