Hot C_CPI_2506 Questions, Real C_CPI_2506 Exam Questions

Every working person knows that C_CPI_2506 is a dominant figure in the field and also helpful for their career. If C_CPI_2506 reliable exam bootcamp helps you pass C_CPI_2506 exams and get a qualification certificate you will obtain a better career even a better life. Our C_CPI_2506 Study Guide materials cover most of latest real C_CPI_2506 test questions and answers. If you are certainly determined to make something different in the field, a useful certification will be a stepping-stone for your career.

SAP C_CPI_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 2	<ul style="list-style-type: none">Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.

Topic 3	<ul style="list-style-type: none"> • SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 4	<ul style="list-style-type: none"> • Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.

SAP Certified Associate - Integration Developer Sample Questions (Q36-Q41):

NEW QUESTION # 36

To receive the "sap/s4/beh/businesspartner/va/BusinessPartner/Changed/v1" business event from SAP S/4HANA Cloud in SAP Integration Suite Event Mesh, which components are required to construct the Topic Subscription string?

- A. Source system Target system Integration flow
- B. Business Partner ID Change type Event timestamp
- C. API key Authentication token Client ID
- D. Namespace Topic name Separator.

Answer: D

Explanation:

In SAP Event Mesh, topic subscriptions follow a defined hierarchical string structure:

Namespace # Defines the domain or context (e.g., sap/s4/beh/businesspartner).

Topic name # Specifies the exact event (e.g., BusinessPartner/Changed).

Separators (/) # Used to concatenate namespace and event details into a full subscription string.

Other options:

API key, Client ID, and Authentication token # Used for connectivity but not part of the topic string.

Business Partner ID, Change type, Event timestamp # Payload details, not part of the subscription string.

Source/Target system # Not required for constructing the topic name.

Thus, the correct components are Namespace, Topic name, Separator.

NEW QUESTION # 37

You want to send messages over an SOAP adapter to an integration flow. Which method do you use to send the messages?

- A. POST
- B. UPDATE
- C. PATCH
- D. GET

Answer: A

Explanation:

When sending messages to an integration flow via SOAP adapter:

The request follows standard SOAP protocol semantics.

Messages are sent using HTTP POST, since SOAP messages are enclosed in an XML envelope carried in the HTTP request body.

GET, UPDATE, PATCH are not applicable for SOAP operations.

Thus, the correct method is POST.

NEW QUESTION # 38

In which of the following must you call `getBody()` to access the payload in a Groovy script?

- A. property

- B. header
- **C. message**
- D. camelcontext

Answer: C

Explanation:

To access the payload in a Groovy script, you must use the message object and call the `getBody()` method on it. The message object represents the current message that is being processed in the integration flow. It has methods to get and set the message body, headers, properties, and attachments. The `getBody()` method returns the message body as an object of the specified type, such as `java.lang.String`, `java.io.InputStream`, or `org.w3c.dom.Document`. NEW QUESTION # 39

What must you do to find out which entity sets are available in the OData V2.0 interface?

- A. Retrieve the service document from the interface.
- B. Search in the Global Directory of all available OData interfaces.
- C. Contact the OData interface manufacturer
- **D. Retrieve the metadata document from the interface.**

Answer: D

Explanation:

To find out which entity sets are available in the OData V2.0 interface, you must retrieve the metadata document from the interface. The metadata document is an XML document that describes the data model of the OData service, including the entity types, entity sets, associations, functions, and actions. The metadata document can be accessed by appending `$metadata` to the service root URL of the OData service. For example, if the service root URL is `https://services.odata.org/OData/OData.svc/`, then the metadata document URL is `https://services.odata.org/OData/OData.svc/$metadata`. The metadata document can be used to discover the structure and capabilities of the OData service and to generate client code or proxies. NEW QUESTION # 40

What are target endpoints of an API? Note: There are 3 correct answers to this question.

- **A. API proxy**
- **B. URL of original API**
- C. API consumer
- **D. API provider**
- E. Resources

Answer: A,B,D

Explanation:

The target endpoints of an API are the API provider, the API proxy, and the URL of the original API. The API provider is the system or application that exposes the interface and functionality of the API. The API proxy is the intermediary component that mediates the requests and responses between the API consumer and the API provider. The URL of the original API is the address that identifies the location and resource of the API.
