Accurate 156-836 Answers, 156-836 Well Prep

CheckPoint 156-836 Practice test is an integral part of Check Point Certified Maestro Expert - R81 (CCME) (156-836) exam preparation. Exam-Killer offers desktop-based 156-836 practice exam software and web-based Check Point Certified Maestro Expert - R81 (CCME) (156-836) practice test that simulates the real Check Point Certified Maestro Expert - R81 (CCME) (156-836) exam environment. These Check Point Certified Maestro Expert - R81 (CCME) (156-836) practice tests are designed to help identify strengths and weaknesses.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q42-Q47):

NEW QUESTION # 42

What command should be used for collecting diagnostic information about the orchestrator?

- A. cpview
- B. orch_info
- C. asg perf-v
- **D. cpinfo**

Answer: D

Explanation:

The cpinfo command is a tool that collects diagnostic information about the orchestrator, such as hardware, software, network, configuration, and logs. The cpinfo command generates a file that can be sent to Check Point Support for analysis and

troubleshooting. The cpinfo command can be run on the orchestrator's CLI or WebUI.

NEW QUESTION # 43

Layer 4 distribution is enabled by default in Maestro. Which is not a scenario when you would want to leave this enabled?

- A. When there is a heavy imbalance of traffic between the SGMs that are members of the same SG.
- B. When there is a large number of source ports in use by protocols such as HTTP, HTTPS, and DNS.
- C. When dynamic routing protocols, such as BGP or OSPF are used.
- D. When the SG is NATing a very high percentage of traffic passing through it.

Answer: C

Explanation:

Explanation

This is the correct answer because Layer 4 distribution is not recommended when dynamic routing protocols are used in Maestro. Layer 4 distribution is a feature that adds the source and/or destination ports to the distribution equation, which can improve the load balancing among the SGMs. However, it can also cause issues with the correction layer, which is a mechanism that ensures the packets are processed by the correct SGM. Dynamic routing protocols, such as BGP or OSPF, use specific ports to exchange routing information and establish neighbor relationships. If Layer 4 distribution is enabled, it can interfere with the routing protocol packets and cause routing instability or failures.

NEW QUESTION # 44

What is the max amount of Orchestrators in Dual-site setup?

- A. 0
- B. 1
- C. 4 per Security Group
- D. 2 per Security Group

Answer: C

Explanation:

A Dual Site setup can have either two or four orchestrators, depending on the scenario. However, the maximum number of orchestrators per Security Group is four, regardless of the number of sites. This is because each Security Group can have up to two orchestrators on each site, and each site can have up to two orchestrators. Therefore, the maximum number of orchestrators in a Dual Site setup is four per Security Group.

NEW QUESTION # 45

After you import the R81.10 software package, what do you use to verify that it is possible to upgrade an MHO or SG?

- A. The package is verified during the import process and a warning or error will be displayed at that time.
- B. Nothing. CPUSE will run a verification during the upgrade process to ensure the package is compatible.
- C. Run HCP. One of the tests will list upgrade eligibility status for the MHO or SG.
- **D. Run the Pre-Upgrade Verifier to make sure it is possible to upgrade**

Answer: D

Explanation:

The Pre-Upgrade Verifier is a tool that checks the compatibility and readiness of the Maestro environment for the upgrade process. It verifies the current version, the target version, the hardware requirements, the configuration settings, and the license validity of the Maestro Orchestrators and the Security Groups. It also identifies any potential issues or risks that might affect the upgrade and provides recommendations on how to resolve them. The Pre-Upgrade Verifier should be run before importing the R81.10 software package and before performing the actual upgrade.

NEW QUESTION # 46

What is the purpose of Management ports located on the Rear Panel of the Orchestrator MHO-140?

- A. 1Gbps connectivity for Security Groups
- B. Reserved for internal purposes. Not in use.
- **C. Out-of-band interfaces for access to Orchestrator itself**
- D. Additional ports used as uplinks

Answer: C

Explanation:

The Management ports located on the Rear Panel of the Orchestrator MHO-140 are out-of-band interfaces that provide access to the Orchestrator itself for configuration and management purposes. They are not used for traffic distribution or connectivity to the Security Groups or the external networks. They are 1Gbps RJ-45 ports that can be connected to a switch or a router.
