Google Cloud Digital Leader Sample Questions (Q165-Q170):

NEW QUESTION # 165

Which Google Cloud product can report on and maintain compliance on your entire Google Cloud organization to cover multiple projects?

- A. Security Command Center
- B. Google Cloud Armor
- C. Identity and Access Management
- D. Cloud Logging

Answer: C

NEW QUESTION # 166

A customer has a tens of applications that are dependent on Oracle databases in their on-premise data centers. The customer wants

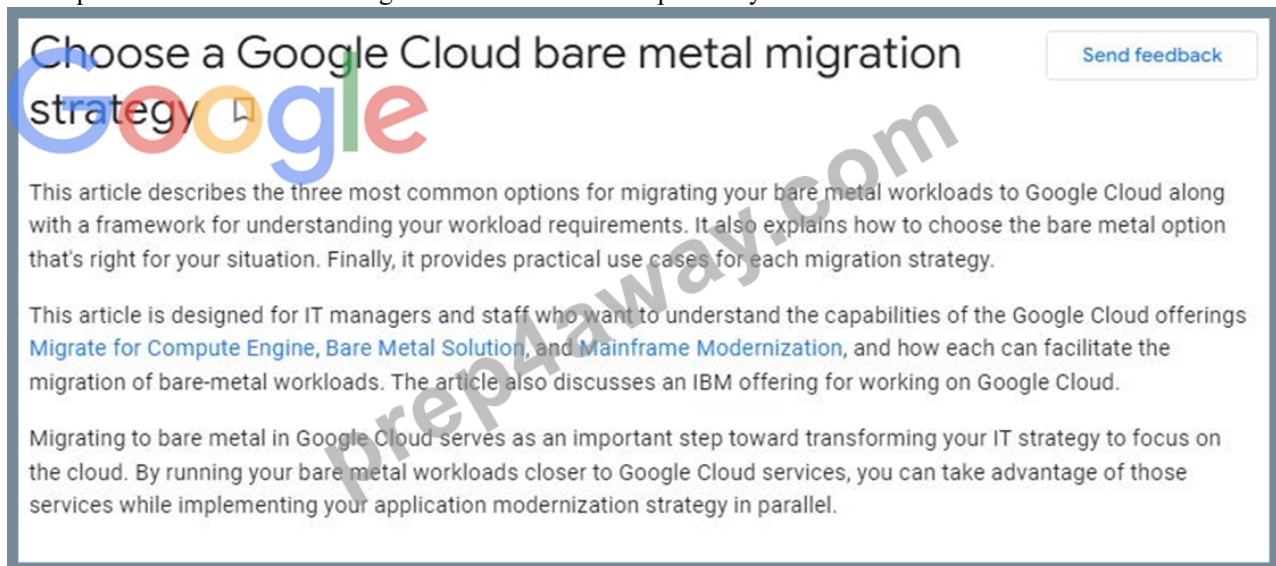

to migrate to Google Cloud. Their long term goal is to move to other cloud native database technologies. What options do they have to initially move their data?

- A. Since there is no hosted Oracle solution, leave the Oracle data on-premise while doing analytics on Google Cloud.
- B. Migrate to a Bare Metal server.
- **C. Migrate to Cloud SQL.**
- D. Containerize Oracle and run it using Cloud Run.

Answer: C

Explanation:

The Bare Metal solution is the recommended approach. You can deploy Oracle capabilities like clustered databases, replication, and all performance features at licensing costs that are similar to on-premise systems

The screenshot shows a Google Cloud article titled "Choose a Google Cloud bare metal migration strategy". The article describes three common options for migrating bare metal workloads to Google Cloud: Migrate for Compute Engine, Bare Metal Solution, and Mainframe Modernization. It also discusses an IBM offering for working on Google Cloud. The article is designed for IT managers and staff who want to understand the capabilities of Google Cloud offerings and how each can facilitate the migration of bare-metal workloads. The article also discusses an IBM offering for working on Google Cloud. Migrating to bare metal in Google Cloud serves as an important step toward transforming your IT strategy to focus on the cloud. By running your bare metal workloads closer to Google Cloud services, you can take advantage of those services while implementing your application modernization strategy in parallel.

NEW QUESTION # 167

Your client has an on-premises data center. Due to technical limitations, they are unable to scale globally. They have decided to adopt the public cloud. However, they don't want to be locked into any one vendor and, therefore, would like to work with multiple cloud providers. They have used open source container technologies and would like to continue using them.

- A. Kubernetes that runs containers as their core workloads
- B. Cloud Run which supports containers and can scale in a serverless fashion
- C. AppEngine Flexible Environment which supports containers
- **D. Anthos that runs containers as their core workloads**

Answer: D

Explanation:

Anthos unifies the management of infrastructure and applications across on-premises, edge, and in multiple public clouds with a Google Cloud-backed control plane for consistent operation at scale.

NEW QUESTION # 168

As your organization increases its release velocity, the VM-based application upgrades take a long time to perform rolling updates due to OS boot times. You need to make the application deployments faster.

What should your organization do?

- **A. Automate your upgrade rollouts**
- B. Migrate your VMs to the cloud, and add more resources to them
- C. Increase the resources of your VMs
- D. Convert your applications into containers

Answer: A

NEW QUESTION # 169

An organization wants to search for and share plug-and-play AI components which can easily build ML services into their project. Which Google Cloud product should the organization use?

- **A. AI Hub**
- B. Recommendations AI
- C. Document AI
- D. Cloud Talent Solution

Answer: A

Explanation:

Because AI Hub is a hosted repository of plug-and-play AI components.
