### 100% Pass Quiz High Hit-Rate Microsoft - Valid AI-102 Test Answers

The proper answer to your questions is Dumps4PDF. When studying for the Designing and Implementing a Microsoft Azure AI Solution (AI-102) certification exam, Dumps4PDF is one of the most helpful resources. Dumps4PDF guarantees success on the first

try by providing you with actual Designing and Implementing a Microsoft Azure AI Solution (AI-102) exam questions in PDF, desktop practice exam software, and a web-based practice exam

## Microsoft Designing and Implementing a Microsoft Azure AI Solution Sample Questions (Q46-Q51):

### **NEW QUESTION #46**

You are developing an application that will use the Computer Vision client library. The application has the following code.

```
public async TaskAnalyzeImage (ComputerVisionClient client, string localImage)
       List<VisualFeatureTypes> features = new List<VisualFeatureTypes>()
                      VisualFeatureTypes.Description,
                      VisualFeatureTypes.Tags,
              1:
       using (Stream imageStream = File.OpenRead(localImage))
              try
                ImageAnalysis results = await client.AnalygeImageImStreamAsyn
                                                                                  mageStream, features);
                foreach (var caption in results Description Captions)
                     Console.WriteLine($"{caption.Text} with confidence {caption.Confidence}");
                                 in results. Tags)
                foreach
                     console.WriteLine($"{tag.Name} {tag.Confidence}
              catch (Exception ex)
                     Console.WriteLine(ex.Message);
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

# Statements Statements No The code will perform face recognition. The code will list tags and their associated confidence. The code will read a file from the local file system. Answer: Explanation:

### **Answer Area**

Statements	Yes	No
The code will perform face recognition.	0	$\bigcirc$
The code will list tags and their associated confidence.		0
The code will read a file from the local file system.	soft	0

You train a Custom Vision model to identify a company's products by using the Retail domain.

You plan to deploy the model as part of an app for Android phones.

You need to prepare the model for deployment.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

### Answer:

Explanation:  Statements	Yes	No
The code will create and maintain the UserProfile object in the underlying storage layer.	0	0
The code will create and maintain the ConversationData object in the underlying storage layer.	0	0
The UserProfile and ConversationData objects will persist when the Bot Framework runtime terminates.	0	0

Graphical user interface, text, application Description automatically generated

Change the model domain.

Retrain the model.

Test the model.

Export the model.

Reference:

https://docs.microsoft.com/en-us/azure/cognitive-services/custom-vision-service/export-your-model

### **NEW QUESTION #48**

You are building a transcription service for technical podcasts.

Testing reveals that the service fails to transcribe technical terms accurately.

You need to improve the accuracy of the service.

Which five actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

### Answer:

Explanation:

https://learn.microsoft.com/en-us/azure/cognitive-services/speech-service/custom-speech-overview#how-does-it- With Custom Speech, you can upload your own data, test and train a custom model, compare accuracy between models, and deploy a model to a custom endpoint.

- Create a project and choose a model. Use a Speech resource that you create in the Azure portal. If you will train a custom model with audio data, choose a Speech resource region with dedicated hardware for training audio data.
- Upload test data. Upload test data to evaluate the speech to text offering for your applications, tools, and products.
- Train a model. Provide written transcripts and related text, along with the corresponding audio data. Testing a model before and after training is optional but recommended.
- Deploy a model. Once you're satisfied with the test results, deploy the model to a custom endpoint. With the exception of batch transcription, you must deploy a custom endpoint to use a Custom Speech model.

### **NEW OUESTION #49**

You Build a bot in JavaScript.

From the Azure Command-Line interface (CLI), you run the following command. az bot prepare-deploy

You need to deploy the bot to Azure.

Which three Azure CLI commands should you run in sequence? To answer, move the appropriate commands from the list of commands to the answer area and arrange them in the client order.

### Answer:

Explanation:

### Explanation

To deploy the bot to Azure, you should run the following three Azure CLI commands in sequence:

az deployment group create This command will create the Azure resources for your bot using an ARM template and a parameters file. You need to specify the resource group name, the template file path, and the parameters file path. For example: az deployment group create --resource-group myResourceGroup --template-file

"deploymentTemplates\template-with-preexisting-rg\_json" --parameters

"deploymentTemplates\parameters-for-template-BotApp-with-rg.json"

This command will also output the app ID and password of your bot, which you will need for the next command 1. az webapp deployment source config-zip This command will deploy your bot code to the app service that you created in the previous step. You need to specify the resource group name, the app service name, and the zip file path of your bot code. For example:

az webapp deployment source config-zip --resource-group myResourceGroup --name myBotAppService --src "code.zip"

This command will also output the URL of your bot endpoint, which you will need for the next command2. az ad app update This command will update your bot registration with the endpoint URL of your bot.

You need to specify the app ID of your bot and the endpoint URL. For example:

az ad app update --id myBotAppId --set

replyUrls="https://myBotAppService.azurewebsites.net/api/messages"

This command will complete the deployment process and make your bot ready to be tested3.

### **NEW QUESTION #50**

You have an Azure AI service model named Model1 that identifies the intent of text input.

You develop a Python app named App1.

You need to configure App1 to use Model1.

Which package should you add to App1?

- A. azure-mgmt-cognitiveservices
- B. azure-ai-language-conversations
- C. azure-cognitiveservices-speech
- D. azure-cognitiveservices-language-textanalytics

### Answer: B

### Explanation:

Conversation App: It's used in extracting intents and entities in conversations.

https://pypi.org/project/azure-ai-language-conversations/

### **NEW QUESTION #51**

....

If you start to prapare for the AI-102 exam from books, then you will find that the content is too broad for you to cope with the exam questions. So, we just pick out the most important knowledge to learn. Through large numbers of practices, you will soon master the core knowledge of the AI-102 Exam. It is important to review the questions you always choose mistakenly. You should concentrate on finishing all exercises once you are determined to pass the AI-102 exam. And you will pass for sure as long as you study with our AI-102 study guide carefully.
