NEW QUESTION # 110

What sits between a browser and an internet connection and alters requests and responses in a way the developer did not intend?

- A. Reverse engineering
- **B. Intercept proxy**
- C. Load testing
- D. Input validation

Answer: B

Explanation:

An intercept proxy, also known as a proxy server, sits between a web client (such as a browser) and an external server to filter, monitor, or manipulate the requests and responses passing through it. This can be used for legitimate purposes, such as security testing and user privacy, but it can also be exploited by attackers to alter web traffic in a way that the developer did not intend, potentially leading to security vulnerabilities.

:

Understanding of HTTP and HTTPS protocols².

Definition and role of proxy servers³.

NEW QUESTION # 111

Which threat modeling step collects exploitable weaknesses within the product?

- A. Set the scope
- B. Analyze the target
- **C. Identify and document threats**
- D. Rate threats

Answer: C

Explanation:

The step in threat modeling that involves collecting exploitable weaknesses within the product is Identify and document threats. This step is crucial as it directly addresses the identification of potential security issues that could be exploited. It involves a detailed examination of the system to uncover vulnerabilities that could be targeted by threats.

References: The OWASP Foundation's Threat Modeling Process outlines a structured approach where identifying and documenting threats is a key step¹. Additionally, various sources on threat modeling agree that the identification of threats is a fundamental aspect of the process, as it allows for the subsequent analysis and mitigation of these threats²³⁴⁵.

NEW QUESTION # 112
