Elaborately designed and developed Data-Cloud-Consultant test guide as well as good learning support services are the key to assisting our customers to realize their dreams. Our Data-Cloud-Consultant study braindumps have a variety of self-learning and self-assessment functions to detect learners' study outcomes, and the statistical reporting function of our Data-Cloud-Consultant test guide is designed for students to figure out their weaknesses and tackle the causes, thus seeking out specific methods dealing with them. Most of them give us feedback that they have learned a lot from our Data-Cloud-Consultant Exam Guide and think it has a lifelong benefit. They have more competitiveness among fellow workers and are easier to be appreciated by their boss. In fact, the users of our Data-Cloud-Consultant exam have won more than that, but a perpetual wealth of life.

Salesforce Certified Data Cloud Consultant Sample Questions (Q115-Q120):

NEW QUESTION # 115

A Data Cloud consultant recently added a new data source and mapped some of the data to a new custom data model object (DMO) that they want to use for creating segments. However, they cannot view the newly created DMO when trying to create a new segment.

What is the cause of this issue?

- A. Segmentation is only supported for the Individual and Unified Individual DMOs.
- B. Data has not yet been ingested into the DMO.
- C. The new DMO does not have a relationship to the individual DMO
- **D. The new DMO is not of category Profile.**

Answer: D

Explanation:

Explanation

The cause of this issue is that the new custom data model object (DMO) is not of category Profile. A category is a property of a DMO that defines its purpose and functionality in Data Cloud. There are three categories of DMOs: Profile, Event, and Other. Profile DMOs are used to store attributes of individuals or entities, such as name, email, address, etc. Event DMOs are used to store actions or interactions of individuals or entities, such as purchases, clicks, visits, etc. Other DMOs are used to store any other type of data that does not fit into the Profile or Event categories, such as products, locations, categories, etc. Only Profile DMOs can be used for creating segments in Data Cloud, as segments are based on the attributes of individuals or entities. Therefore, if the new custom DMO is not of category Profile, it will not appear in the segmentation canvas. The other options are not correct because they are not the cause of this issue. Data ingestion is not a prerequisite for creating segments, as segments can be created based on the data model schema without actual data. The new DMO does not need to have a relationship to the individual DMO, as segments can be created based on any Profile DMO, regardless of its relationship to other DMOs. Segmentation is not only supported for the Individual and Unified Individual DMOs, as segments can be created based on any Profile DMO, including custom ones.

NEW QUESTION # 116

What does the Ignore Empty Value option do in identity resolution?

- A. Ignores Individual object records with empty fields when running identity resolution rules
- B. Ignores empty fields when running the standard match rules
- C. Ignores empty fields when running reconciliation rules
- D. Ignores empty fields when running any custom match rules

Answer: C

Explanation:

The Ignore Empty Value option in identity resolution allows customers to ignore empty fields when running reconciliation rules. Reconciliation rules are used to determine the final value of an attribute for a unified individual profile, based on the values from different sources. The Ignore Empty Value option can be set to true or false for each attribute in a reconciliation rule. If set to true, the reconciliation rule will skip any source that has an empty value for that attribute and move on to the next source in the priority order. If set to false, the reconciliation rule will consider any source that has an empty value for that attribute as a valid source and use it to populate the attribute value for the unified individual profile.

The other options are not correct descriptions of what the Ignore Empty Value option does in identity resolution. The Ignore Empty Value option does not affect the custom match rules or the standard match rules, which are used to identify and link individuals across different sources based on their attributes. The Ignore Empty Value option also does not ignore individual object records with empty fields when running identity resolution rules, as identity resolution rules operate on the attribute level, not the record level.

NEW QUESTION # 117

Northern Trail Outfitters is using the Marketing Cloud Starter Data Bundles to bring Marketing Cloud data into Data Cloud.

What are two of the available datasets in Marketing Cloud Starter Data Bundles?

Choose 2 answers

- A. MobileConnect
- B. MobilePush
- C. Loyalty Management
- D. Personalization

Answer: A,B

Explanation:

The Marketing Cloud Starter Data Bundles are predefined data bundles that allow you to easily ingest data from Marketing Cloud into Data Cloud1. The available datasets in Marketing Cloud Starter Data Bundles are Email, MobileConnect, and MobilePush2.

These datasets contain engagement events and metrics from different Marketing Cloud channels, such as email, SMS, and push notifications². By using these datasets, you can enrich your Data Cloud data model with Marketing Cloud data and create segments and activations based on your marketing campaigns and journeys¹. The other options are incorrect because they are not available datasets in Marketing Cloud Starter Data Bundles. Option A is incorrect because Personalization is not a dataset, but a feature of Marketing Cloud that allows you to tailor your content and messages to your audience³. Option C is incorrect because Loyalty Management is not a dataset, but a product of Marketing Cloud that allows you to create and manage loyalty programs for your customers⁴. NEW QUESTION # 118

Which consideration related to the way Data Cloud ingests CRM data is true?

- A. The CRM Connector's synchronization times can be customized to up to 15-minute intervals.
- B. Formula fields are refreshed at regular sync intervals and are updated at the next full refresh.
- C. CRM data cannot be manually refreshed and must wait for the next scheduled synchronization.
- **D. The CRM Connector allows standard fields to stream into Data Cloud in real time.**

Answer: D

Explanation:

The correct answer is D. The CRM Connector allows standard fields to stream into Data Cloud in real time. This means that any changes to the standard fields in the CRM data source are reflected in Data Cloud almost instantly, without waiting for the next scheduled synchronization. This feature enables Data Cloud to have the most up-to-date and accurate CRM data for segmentation and activation¹.

The other options are incorrect for the following reasons:

A . CRM data can be manually refreshed at any time by clicking the Refresh button on the data stream detail page². This option is false.

B . The CRM Connector's synchronization times can be customized to up to 60-minute intervals, not 15-minute intervals³. This option is false.

C . Formula fields are not refreshed at regular sync intervals, but only at the next full refresh⁴. A full refresh is a complete data ingestion process that occurs once every 24 hours or when manually triggered. This option is false.

NEW QUESTION # 119

Which permission setting should a consultant check if the custom Salesforce CRM object is not available in New Data Stream configuration?

- A. Confirm the Create object permission is enabled in the Data Cloud org.
- B. Confirm that the Modify Object permission is enabled in the Data Cloud org.
- C. Confirm the Ingest Object permission is enabled in the Salesforce CRM org.
- **D. Confirm the View All object permission is enabled in the source Salesforce CRM org.**

Answer: D

Explanation:

To create a new data stream from a custom Salesforce CRM object, the consultant needs to confirm that the View All object permission is enabled in the source Salesforce CRM org. This permission allows the user to view all records associated with the object, regardless of sharing settings¹. Without this permission, the custom object will not be available in the New Data Stream configuration². References:
