SAP C-SEC-2405 Sample Questions Answers - New C-SEC-2405 Test Question

PassReview SAP C-SEC-2405 exam training materials praised by the majority of candidates is not a recent thing. This shows PassReview SAP C-SEC-2405 exam training materials can indeed help the candidates to pass the exam. Compared to other questions providers, PassReview SAP C-SEC-2405 exam training materials have been far ahead. uestions broad consumer recognition and reputation, it has gained a public praise. If you want to participate in the SAP C-SEC-2405 Exam, quickly into PassReview website, I believe you will get what you want. If you miss you will regret, if you want to become a professional IT expert, then quickly add it to cart.

SAP C-SEC-2405 Exam Syllabus Topics:

--

Topic	Details
Topic 1	• Authorization and Role Maintenance: This section of the exam measures the skills of SAP administrators and covers the management of user authorizations and roles within SAP systems. It emphasizes the processes involved in defining, maintaining, and approving roles to ensure secure access. A key skill assessed is managing role authorizations effectively to mitigate access risks.
Topic 2	• Public Cloud User and Role Management: This section of the exam measures the skills of SAP IT cloud Professionals and covers managing users and roles in public cloud environments for SAP applications.
Topic 3	• SAP Fiori Authorizations and SAP S • 4HANA: This section of the exam measures the skills of SAP Developers and covers authorization management specific to SAP Fiori applications within SAP S • 4HANA. It emphasizes configuring authorizations for Fiori apps to ensure appropriate access levels. A key skill assessed is understanding Fiori authorization concepts to enhance user experience.
Topic 4	• Infrastructure Security and Authentication: This section of the exam measures the skills of SAP IT Professionals and covers infrastructure security measures and authentication methods used in SAP environments. It emphasizes protecting systems from unauthorized access and ensuring secure user authentication.

SAP Certified Associate - Security Administrator Sample Questions (Q75-Q80):

NEW QUESTION # 75

In the administration console of the Cloud Identity Services, which authentication providers are available?

Note: There are 2 correct answers to this question.

- A. Ariba
- B. Concur
- C. SuccessFactors
- D. FieldGlass

Answer: A,C

Explanation:

* Context: SAP Cloud Identity Services provide integration with various authentication providers to facilitate secure access to SAP solutions.

* Solution Descriptions:

* SuccessFactors and Ariba are supported as authentication providers in the Cloud Identity Services Administration Console.

* Other options like FieldGlass and Concur are not natively listed as authentication providers in this context.

SAP Security References:

* SAP Cloud Identity Services Documentation

* SAP SuccessFactors and Ariba Integration Guides

NEW QUESTION # 76

In SAP S/4HANA Cloud Public Edition, what can you do with the Display Authorization Trace? Note: There are 3 correct answers to this question.

- A. Adjust role restrictions to account for missing authorizations
- B. Analyze authorization check results for missing authorizations
- C. Display business roles granting specific access
- D. Analyze authorization check results for already assigned authorizations
- E. Adjust role restrictions to further limit access when performing forensic analysis

Answer: B,C,D

Explanation:

The Display Authorization Trace in SAP S/4HANA Cloud Public Edition is a powerful tool for analyzing authorization issues. It allows administrators to analyze authorization check results for missing authorizations, identifying gaps where users lack necessary permissions to perform tasks, which is critical for troubleshooting access issues. Additionally, it can display business roles granting specific access, providing visibility into which roles provide permissions for particular applications or data, aiding in role management and compliance checks. The tool also supports analyzing authorization check results for already assigned authorizations, helping administrators verify whether existing permissions are functioning as intended.

However, adjusting role restrictions, either to address missing authorizations or for forensic analysis, is not a function of the Display Authorization Trace, as it is a diagnostic tool, not a maintenance interface. These capabilities make the Display Authorization Trace essential for ensuring secure and efficient access control, supporting both operational and audit requirements in SAP S/4HANA Cloud Public Edition.

NEW QUESTION # 77

What can be assigned directly to a user when using the SAP Launchpad service in SAP BTP?

- A. Launchpad roles
- B. Catalogs
- C. Spaces
- **D. Role collections**

Answer: D

Explanation:

In the SAP Launchpad service within SAP Business Technology Platform (BTP), Role collections can be assigned directly to a user. Role collections are groups of roles that define access to specific applications, services, or functionalities within the Launchpad, allowing administrators to grant users the necessary permissions to access content, such as Fiori apps or custom applications. By assigning role collections directly to users in the SAP BTP subaccount, administrators ensure that users have the appropriate access rights tailored to their responsibilities. Spaces, which organize apps in the Launchpad, and Catalogs, which group apps and tiles, are assigned to roles or role collections, not directly to users. Launchpad roles are not a distinct entity in SAP BTP; roles are part of role collections. This direct assignment of role collections simplifies access management, ensuring secure and efficient user access to the SAP Launchpad service while aligning with SAP BTP's security and authorization framework.

NEW QUESTION # 78

Which authorization objects can be used to restrict access to SAP Enterprise Search models in the SAP Fiori launchpad? Note: There are 2 correct answers to this question.

- **A. SDDLVIEW**
- B. S_ESH_ADM
- **C. S_ESH_CONN**
- D. RSDDLTP

Answer: A,C

Explanation:

To restrict access to SAP Enterprise Search models in the SAP Fiori launchpad, the authorization objects SDDLVIEW and S_ESH_CONN are used. SDDLVIEW controls access to data definition language (DDL) views, which are often underlying components of search models, ensuring that only authorized users can access or execute these views within the Fiori environment. S_ESH_CONN governs access to enterprise search connectors, which link search models to the Fiori launchpad, allowing administrators to restrict which users can utilize specific search functionalities. These objects provide granular control over search model access, aligning with security and segregation of duties requirements. S_ESH_ADM is used for administrative tasks related to enterprise search, not direct model access, and RSDDLTP is not a standard SAP authorization object. By leveraging SDDLVIEW and S_ESH_CONN, SAP ensures that search capabilities in the Fiori launchpad are securely managed, preventing unauthorized access to sensitive data while enabling efficient search functionality for authorized users.

NEW QUESTION # 79

When planning an authorization concept for your SAP S/4HANA Cloud Public Edition implementation, what rules must you consider? Note: There are 2 correct answers to this question.

- A. Business catalogs can be assigned directly to a business user.
- **B. Business catalogs can be assigned directly to a business role.**
- **C. Business roles can be assigned directly to a business user.**
- D. SAP Fiori apps, dashboards, and displays can be assigned directly to a business role.

Answer: B,C

Explanation:

* Context: SAP S/4HANA Cloud Public Edition requires careful planning of the authorization concept to ensure proper access control.

* Solution Explanation:

* C: Business roles serve as containers for catalogs and can be assigned directly to users.

* D: Business catalogs are assigned to business roles, defining the scope of access.
