Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q33-Q38):

NEW QUESTION # 33

An organization's IT team follows an API-led connectivity approach and must use AnyPoint Platform to implement a System API that securely accesses customer data. The organization uses Salesforce as the system of record for all customer data and its most important objective is to reduce the overall development time to release the System API. The team's integration architect has

identified four different approaches to access the customer data from within the implementation of the System API by using different Anypoint Connectors that all meet the technical requirements of the project. Which approach should the team choose to meet the organization's objective to reduce the time to develop and release the System API?

- A. Use the Anypoint Connector for HTTP to connect to the Salesforce APIs to directly access the customer data
- B. Use the Anypoint Connector for Database to connect to a MySQL database to access a copy of the customer data
- **C. Use the Anypoint Connector for Salesforce to connect to the Salesforce APIs to directly access the customer data**
- D. Use the Anypoint Connector for FTP to download a file containing a recent near-real time extract of the customer data

Answer: C

Explanation:

In an API-led connectivity approach, using the most efficient method to access system data can significantly reduce development time. Here's why using the Anypoint Connector for Salesforce is the best approach:

* Direct Access:

* Salesforce APIs: The Anypoint Connector for Salesforce provides direct access to Salesforce APIs, allowing the System API to retrieve customer data efficiently and securely.

* No Middleware: Directly accessing Salesforce eliminates the need for intermediary steps, reducing complexity and potential points of failure.

* Reduced Development Time:

* Out-of-the-Box Functionality: The connector offers pre-built operations and functionalities tailored for Salesforce, speeding up development.

* Configuration Over Coding: Using the connector involves minimal configuration compared to coding custom integration logic, leading to faster implementation.

* Security:

* Built-in Security: The connector handles authentication and authorization, ensuring secure data access in line with Salesforce security protocols.

* Alternative Approaches:

* HTTP Connector: While functional, it requires more custom handling for Salesforce API interactions and error management.

* Database Connector: Accessing a database copy of Salesforce data may involve data synchronization challenges and does not provide real-time data.

* FTP Connector: Using FTP for data extracts is less efficient and introduces delays in accessing up-to-date information.

NEW QUESTION # 34

In preparation for a digital transformation initiative an organization is reviewing related IT integration projects that failed for various reasons. According to MuleSoft's surveys of global IT leaders, what is a common cause of IT project failure that this organization may likely discover in its assessment?

- A. Following an Agile delivery methodology
- **B. Lack of alignment around business outcomes**
- C. Reliance on an Integration-Platform-as-a-Service (iPaaS)
- D. Spending too much time on enablement

Answer: B

Explanation:

One common cause of IT project failure identified by MuleSoft's surveys of global IT leaders is the lack of alignment around business outcomes. Here's a detailed explanation:

* Lack of Alignment:

* Definition: This occurs when IT projects are not clearly linked to the organization's strategic goals and business objectives.

* Impact: Misalignment can lead to projects that do not deliver the intended business value, resulting in wasted resources and failed initiatives.

* Common Causes:

* Poor Communication: Lack of effective communication between business stakeholders and IT teams can lead to misunderstandings and misaligned priorities.

* Undefined Objectives: Projects without clearly defined business outcomes and success metrics struggle to demonstrate value and justify investments.

* Solution:

* Business-IT Collaboration: Foster strong collaboration between business and IT to ensure projects are aligned with strategic goals.

* Outcome-Focused Planning: Define clear business outcomes and success criteria at the outset of each project.

NEW QUESTION # 35

A developer is examining the responses from a RESTful web service that is compliant with the Hypertext Transfer Protocol (HTTP/1.1) as defined by the Internet Engineering Task Force (IETF).

In this HTTP/1.1-compliant web service, which class of HTTP response status codes should be specified to indicate when client requests are successfully received, understood and accepted by the web service?

- A. 3xx
- **B. 2xx**
- C. 4xx
- D. 5xx

Answer: B

NEW QUESTION # 36

A MuleSoft developer must implement an API as a Mule application, run the application locally, and execute unit tests against the running application. Which Anypoint Platform component can the developer use to fulfill all of these requirements?

- **A. Anypoint Studio**
- B. API Manager
- C. Anypoint CLI
- D. API Designer

Answer: A

Explanation:

Anypoint Studio is the integrated development environment (IDE) provided by MuleSoft for designing, developing, and testing Mule applications. Here's how it fulfills the developer's requirements:

* API Implementation:

* Design and Development: Anypoint Studio provides a graphical interface to design and develop APIs as Mule applications using pre-built components and connectors.

* Running Applications Locally:

* Local Testing: Developers can run Mule applications locally within Anypoint Studio to test and debug them before deploying to production.

* Unit Testing:

* MUnit Integration: Anypoint Studio includes MUnit, MuleSoft's testing framework. Developers can create and execute unit tests directly within the IDE.

* Test Execution: These tests can be run against the locally running Mule application to validate functionality and ensure code quality.

NEW QUESTION # 37

An API client makes an HTTP request to an API gateway with an Accept header containing the value "application/json".

What is a valid HTTP response payload for this request in the client's requested data format?

- A. status('healthy')
- B. <status>healthy< 'status>
- **C. {"status": "healthy"}**
- D. status: healthy

Answer: C

Explanation:

When an API client makes an HTTP request with an Accept header containing the value "application/json", the API server should respond with a payload formatted as JSON. Here's a detailed explanation:

* Accept Header:

* Purpose: The Accept header indicates the media type(s) that the client is willing to receive from the server.

* Value "application/json": Specifies that the client expects a response in JSON format.

* Valid JSON Response:

* Format: JSON (JavaScript Object Notation) is a lightweight data interchange format that uses key-value pairs.

* Example: A valid JSON response for the requested format would be {"status": "healthy"}.

* Key: "status"

* Value: "healthy"
