PCNSE Quiz Studying Materials: Palo Alto Networks Certified Network Security Engineer Exam - PCNSE Test Torrent & PCNSE Test Bootcamp

If you're looking to advance your Palo Alto Networks career, Palo Alto Networks PCNSE Exam can help you achieve that goal. This certification exam is essential to assist professionals in every aspect of their field. However, studying for the exam can be challenging, and finding reliable study materials can be difficult. This is where TorrentExam comes in.

The PCNSE certification exam is a challenging test that requires candidates to possess a deep understanding of network security and Palo Alto Networks security solutions. PCNSE exam consists of 75 multiple-choice questions, and candidates are given two hours to complete the exam. PCNSE exam is administered through Pearson VUE, a leading provider of computer-based testing services.

Palo Alto Networks PCNSE Certification is highly valued by employers in the cybersecurity industry. It demonstrates that a candidate has the necessary skills and knowledge to work with Palo Alto Networks products and help organizations secure their networks against cyber threats. Palo Alto Networks Certified Network Security Engineer Exam certification can also help candidates advance their careers and increase their earning potential.

Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23

In the New App Viewer under Policy Optimizer, what does the compare option for a specific rule allow an administrator to compare?

- A. Applications configured in the rule with applications seen from traffic matching the same rule
- B. The security rule with any other security rule selected
- C. The running configuration with the candidate configuration of the firewall
- D. Applications configured in the rule with their dependencies

Answer: A

Explanation:

The compare option for a specific rule in the New App Viewer under Policy Optimizer allows an administrator to compare the applications configured in the rule with the applications seen from traffic matching the same rule. This option helps the administrator to identify any discrepancies between the intended and actual applications allowed by the rule. The administrator can then optimize the rule by adding or removing applications as needed¹. Option A is incorrect because the compare option does not compare the running configuration with the candidate configuration of the firewall. That is done by using the Commit > Commit and Push option². Option B is incorrect because the compare option does not compare applications configured in the rule with their dependencies. That is done by using the App Dependencies tab under Policy Optimizer¹. Option D is incorrect because the compare option does not compare the security rule with any other security rule selected. That is done by using the Compare Rules option under Policies > Security³.

NEW QUESTION # 24

What must be taken into consideration when preparing a log forwarding design for all of a customer's deployed Palo Alto Networks firewalls?

- A. Traffic and threat logs will not be forwarded unless the relevant Log Forwarding profile is attached to the security rules
- B. App-ID engine will not identify any application traffic unless the "Enable enhanced application logging" option is selected
- C. Traffic and threat logs will not be forwarded unless the relevant Log Forwarding profile is selected in "Logging and Reporting Settings"
- D. The logs will not contain the names of the identified applications unless the "Enable enhanced application logging" option is selected

Answer: A

Explanation:

For log forwarding in PAN-OS, traffic and threat logs require a Log Forwarding profile attached to Security rules (Option B) to send logs to external systems (e.g., syslog, Panorama). Without this, logs are stored locally but not forwarded, a critical design consideration.

Option A (enhanced logging) affects app details, not forwarding. Option C (App-ID) is false; App-ID works independently. Option D (Logging and Reporting Settings) is incorrect; profiles are rule-based.

Documentation mandates this configuration.

Reference: PAN-OS 11.2 Administrator's Guide, "Policies" section - Log Forwarding Profiles.

NEW QUESTION # 25

A remote administrator needs firewall access on an untrusted interface.

Which two components are required on the firewall to configure certificate-based administrator authentication to the web UI? (Choose two.)

- A. certificate authority (CA) certificate
- B. server certificate
- C. client certificate
- D. certificate profile

Answer: A,D

Explanation:

Explanation

Generate a certificate authority (CA) certificate on the firewall.

NEW QUESTION # 26

Decrypted packets from the website <https://www.microsoft.com> will appear as which application and service within the Traffic log?

- A. SSL and 443
- B. web-browsing and 80
- C. web-browsing and 443
- D. SSL and 80

Answer: C

NEW QUESTION # 27

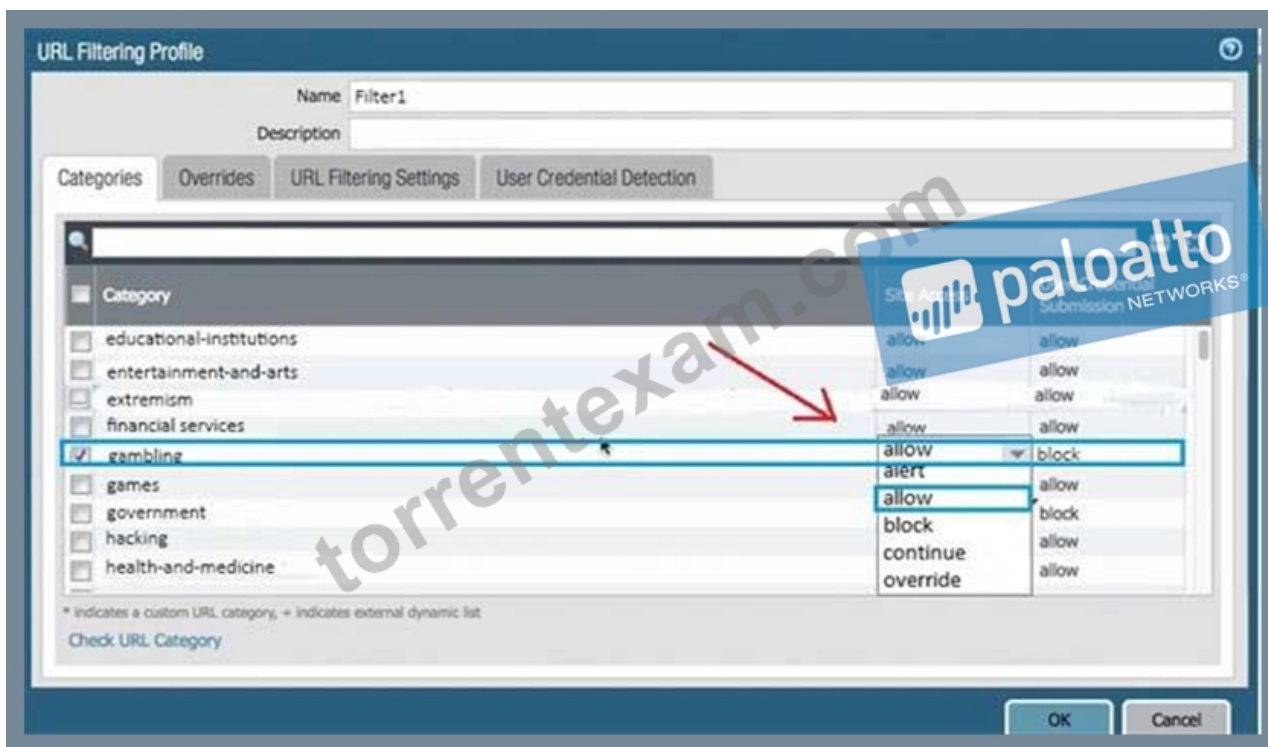

An administrator needs to determine why users on the trust zone cannot reach certain websites. The only information available is shown on the following image.

Which configuration change should the administrator make?

A:

B:

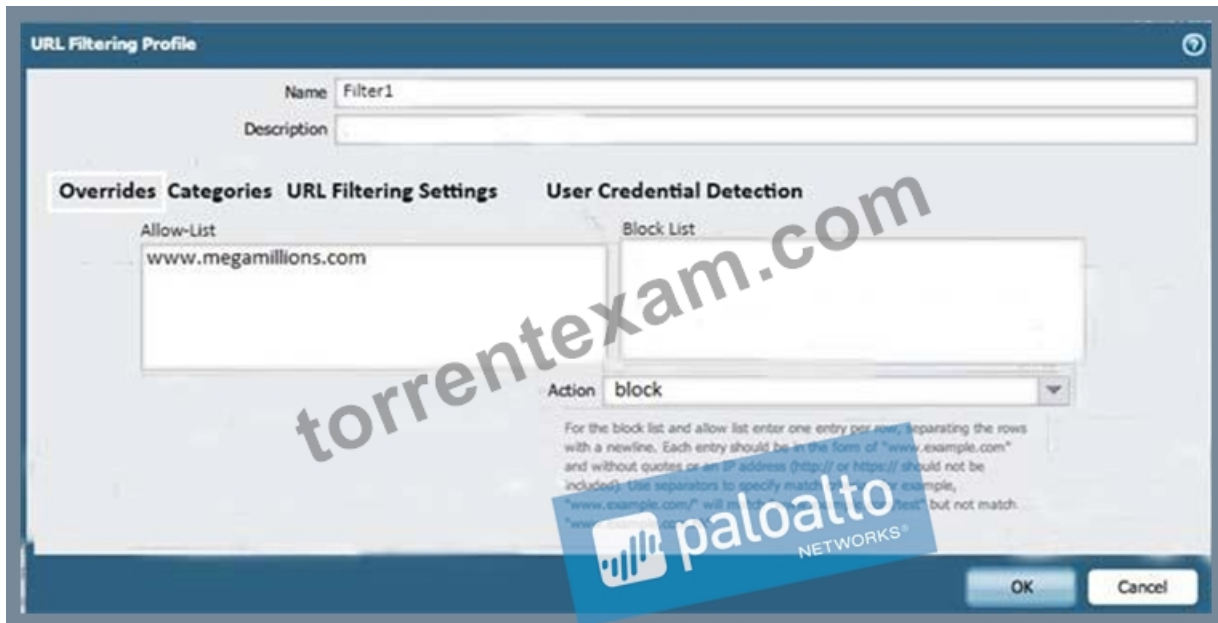

C:

D:

E:

- A. Option A
- B. Option D
- **C. Option B**
- D. Option C
- E. Option E

Answer: C
