Instant ISTQB ISTQB-CTFL Discount, ISTQB-CTFL Test Passing Score

ISTQB-CTFL practice materials can expedite your review process, inculcate your knowledge of the exam and last but not the least, speed up your pace of review dramatically. The finicky points can be solved effectively by using our ISTQB-CTFL practice materials. Some practice materials keep droning on the useless points of knowledge. In contrast, being venerated for high quality and accuracy rate, our ISTQB-CTFL practice materials received high reputation for their efficiency and accuracy rate originating from your interests, and the whole review process may cushioner than you have imagined before.

ISTQB-Foundation Level Exam Sample Questions (Q253-Q258):

NEW QUESTION # 253

Which ONE of the following options is NOT a test objective?

- A. Validating whether the test object is complete and works as expected by the stakeholders
- **B. Finding errors**
- C. Verifying whether specified requirements have been fulfilled
- D. Triggering failures and finding defects

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The primary objectives of testing, as outlined in the ISTQB CTFL v4.0 syllabus, include verifying whether specified requirements are met (A), detecting failures and defects (B), and validating that the test object functions as expected (D). However, "finding errors" (C) is not a direct objective. Errors result from human mistakes, but testing primarily identifies defects, which are flaws in the system

that cause failures. Testing aims to reveal defects rather than directly identify errors in the code.
Reference: ISTQB CTFL v4.0 Syllabus, Section 1.1.1 - Test Objectives

NEW QUESTION # 254

Given the following state model of sales order software:

- * PLACED -> IN PRODUCTION
- * IN PRODUCTION -> CANCELLED
- * IN PRODUCTION -> SHIPPED
- * SHIPPED -> INVOICED
- * INVOICED -> CANCELLED
- * CANCELLED -> PLACED

Which of the following sequences of transitions provides the highest level of transition coverage for the model (assuming you can start in any state)?

- A. PLACED -> CANCELLED -> PLACED -> CANCELLED -> PLACED -> IN PRODUCTION -> CANCELLED
- B. PLACED -> IN PRODUCTION -> SHIPPED -> CANCELLED -> PLACED
- C. IN PRODUCTION -> CANCELLED -> PLACED -> IN PRODUCTION -> CANCELLED -> PLACED
- D. IN PRODUCTION -> SHIPPED -> INVOICED -> CANCELLED -> PLACED -> IN PRODUCTION

Answer: D

Explanation:

To achieve the highest level of transition coverage, one must consider all the possible transitions between the states in the given state model of the sales order software. The transitions in the sequence provided in Option B - "IN PRODUCTION -> SHIPPED -> INVOICED -> CANCELLED -> PLACED -> IN PRODUCTION" cover all the states and transitions effectively. This covers the transitions from IN PRODUCTION to SHIPPED, SHIPPED to INVOICED, INVOICED to CANCELLED, CANCELLED to PLACED, and PLACED to IN PRODUCTION, thereby maximizing the transition coverage. NEW QUESTION # 255

In which of the following cases you would NOT execute maintenance testing?

- A. Update to the Maintainability requirements during the development phase
- B. Retirement of the software or system
- C. Modifications to a released software or system
- D. Migration of the system data to a replacement system

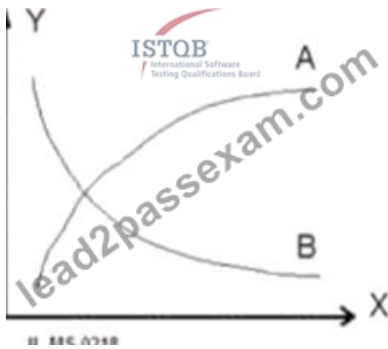

Answer: A

Explanation:

Maintenance testing is testing performed on a software product after delivery to correct defects or improve performance or other attributes. Maintenance testing can be triggered by various situations, such as modifications to a released software or system, migration of the system data to a replacement system, or retirement of the software or system. Maintenance testing is not executed when there is an update to the maintainability requirements during the development phase, as this is not a maintenance situation but rather a change request that should be handled by the development process. NEW QUESTION # 256

The following chart represents metrics related to testing of a project that was completed. Indicate what is represented by tie lines A, B and the axes X,Y

- A.

X - Time
Y - Number of defects
A - Number of open defects
B - Number of closed defects
- B.

X - Time
Y - Cost
A - Cost of test (per week)
B - Cost of finding a single bug (per week)
- C.

X - Time
Y - Count
A - Total number of executed tests
B - Number of open bugs
- D.

X - Time
Y - Percent
A - % of functional tests in the test suite
B - % of non-functional tests in the test suite

Answer: C

Explanation:

Option D correctly explains what is represented by the lines A, B and the axes X, Y in a testing metrics chart.

According to option D:

- * X-axis represents Time
- * Y-axis represents Count
- * Line A represents Number of open bugs
- * Line B represents Total number of executed tests

This information is essential in understanding and analyzing the testing metrics of a completed project.

NEW QUESTION # 257

A state transition diagram describes a control system's behavior in different operational modes. The initial state is "NORMAL MODE".

Which ONE of the following test cases covers an INVALID sequence?

- A. NORMAL MODE # DIAGNOSTIC MODE # DEGRADED MODE # EMERGENCY MODE # DIAGNOSTIC MODE # NORMAL MODE # DIAGNOSTIC MODE
- B. NORMAL MODE # DIAGNOSTIC MODE # DEGRADED MODE # EMERGENCY MODE # DIAGNOSTIC MODE # NORMAL MODE # DEGRADED MODE
- C. NORMAL MODE # DEGRADED MODE # NORMAL MODE # DIAGNOSTIC MODE # DEGRADED MODE # EMERGENCY MODE # DIAGNOSTIC MODE
- D. NORMAL MODE # DIAGNOSTIC MODE # NORMAL MODE # DIAGNOSTIC MODE # EMERGENCY MODE # DIAGNOSTIC MODE # NORMAL MODE

Answer: D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

State transition testing validates valid and invalid state transitions based on defined rules.

* D is invalid because it transitions from DIAGNOSTIC MODE directly to EMERGENCY MODE, which is not a valid state change in most systems.

* Other options follow valid sequences according to state transition rules.
