## Real Peoplecert ITIL-4-Practitioner-Deployment-Management PDF Questions [2025]-Secret To Pass Exam In First Attempt

you can stand out in your work and impressed others with professional background certified by ITIL-4-Practitioner-Deployment-Management exam and feel self-fulfillment, get sense of satisfaction in personal perspective, and have stand a better chance of getting better working condition with the ITIL-4-Practitioner-Deployment-Management Certification. Therefore, our affordable ITIL-4-Practitioner-Deployment-Management study guide will definitely be gainful opportunity. Come and buy our ITIL-4-Practitioner-Deployment-Management exam materials, and you will be grateful for your wise decision.

## Peoplecert ITIL 4 Practitioner: Deployment Management Sample Questions (Q14-Q19):

### NEW QUESTION # 14

[Use Tools and Techniques for Deployment]

Which automation tools should be used to transport and install configuration items into a test environment?

- A. Environment configuration and management tools
- **B. Deployment tools**
- C. Work planning and prioritization tools
- D. Service configuration management tools

**Answer: B**

### NEW QUESTION # 15

[Understand the Key Concepts of Deployment Management]

Which is a key feature of continuous deployment which is not found in other CI/CD stages?

- **A. It enables users to benefit immediately from changes**
- B. It predominantly uses staging environments
- C. It allows individual decisions about software releases
- D. It automatically tests software code

**Answer: A**

Explanation:

Continuous deployment (CD) in ITIL 4 is the most advanced stage of the CI/CD pipeline, where every validated change is automatically deployed to production without manual intervention. The key feature unique to continuous deployment, not found in continuous integration or continuous delivery, is that it enables users to benefit immediately from changes (Option B), as changes reach production instantly after passing automated tests.

Option A (It automatically tests software code): Incorrect, as automated testing is a feature of continuous integration and continuous delivery, not unique to continuous deployment.

Option B (It enables users to benefit immediately from changes): Correct, as continuous deployment automatically pushes validated changes to production, delivering value to users without delay, unlike other CI/CD stages.

Option C (It predominantly uses staging environments): Incorrect, as continuous deployment minimizes reliance on staging environments, deploying directly to production.

Option D (It allows individual decisions about software releases): Incorrect, as continuous deployment eliminates manual release decisions, relying on automation for consistency.

### NEW QUESTION # 16

[Engage with Stakeholders and Suppliers]

How will suppliers support the development of an organization's deployment management practice?

- A. Create deployment models based on those of other organizations
- B. Define the practice success factors for deployment management
- **C. Advise on the selection of tools that can be used across the organization's value streams**
- D. Develop value streams for the organization utilizing deployment management where appropriate

**Answer: C**

Explanation:

Suppliers play a key role in supporting deployment management by providing expertise, tools, and services that align with organizational needs. Option A is correct, as suppliers often advise on selecting tools that integrate with the organization's value streams, ensuring consistency and scalability in deployment practices.

Option A (Advise on the selection of tools that can be used across the organization's value streams): Correct, as suppliers have industry knowledge and can recommend tools (e.g., CI/CD platforms) that enhance deployment efficiency across multiple value streams, aligning with ITIL 4's focus on value-driven tool selection.

Option B (Define the practice success factors for deployment management): Incorrect, as defining success factors is an internal responsibility of the organization, based on its goals and context, not a supplier's role.

Option C (Create deployment models based on those of other organizations): Incorrect, as deployment models should be tailored to the organization's unique needs, not copied from others, per ITIL 4's context-specific approach.

Option D (Develop value streams for the organization utilizing deployment management where appropriate): Incorrect, as developing value streams is an internal strategic activity, while suppliers typically provide support through tools or expertise, not by designing value streams.

### NEW QUESTION # 17

[Understand the Key Concepts of Deployment Management]

Which of the following BEST describes the scope of deployment management practice?

- A. The practice includes removing configuration documentation but not physical servers from the live environment
- B. The practice includes updating service documentation and transferring it to the live environment
- C. The practice includes deploying network hubs but not additional software licenses to the live environment
- **D. The practice includes deploying network hubs to and removing applications from staging environments**

**Answer: D**

Explanation:

ITIL 4's deployment management practice encompasses moving hardware, software, and associated components into or out of environments (e.g., staging, testing, or production) to support service delivery. Option A, which includes deploying network hubs (hardware) and removing applications from staging environments (software), accurately reflects this broad scope across the service lifecycle.

Option A (The practice includes deploying network hubs to and removing applications from staging environments): Correct, as it covers both hardware and software movements across environments, aligning with ITIL 4's definition of deployment management.

Option B (The practice includes updating service documentation and transferring it to the live environment): Incorrect, as updating and transferring documentation is part of knowledge management, not deployment management.

Option C (The practice includes removing configuration documentation but not physical servers from the live environment):

Incorrect, as deployment management includes moving physical servers, and configuration documentation is managed elsewhere.

Option D (The practice includes deploying network hubs but not additional software licenses to the live environment): Incorrect, as software licenses may be part of deployment if required, and the option arbitrarily limits the scope.

### NEW QUESTION # 18

[Measure and Improve Deployment Management]

An organization has an objective to create and use deployment approaches that would fit the needs of the organization and the context. How should the organization assess if this objective is achieved?

- A. By analyzing the adherence to deployment schedules
- **B. By asking stakeholders about their satisfaction with deployment lead times**
- C. By looking at the deployment backlog throughput
- D. By measuring percentage of deployments which did not follow the agreed policies and models

**Answer: B**

Explanation:

ITIL 4 emphasizes stakeholder satisfaction as a key indicator of whether a practice meets organizational needs and context, as it reflects the value delivered to users and the business. Option B, asking stakeholders about their satisfaction with deployment lead times, directly assesses whether deployment approaches are effective and aligned with expectations, making it the best method to evaluate the objective.

Option A (By looking at the deployment backlog throughput): Incorrect, as throughput measures efficiency but does not directly indicate whether the deployment approach fits the organization's needs or context.

Option B (By asking stakeholders about their satisfaction with deployment lead times): Correct, as stakeholder feedback on lead times reflects whether deployments are timely and valuable, aligning with ITIL 4's focus on value co-creation.

Option C (By measuring the percentage of deployments which did not follow the agreed policies and models): Incorrect, as non-compliance indicates process issues but does not directly assess fit with organizational needs or stakeholder satisfaction.

Option D (By analyzing the adherence to deployment schedules): Incorrect, as schedule adherence measures operational performance, not whether the approach meets broader contextual needs.

### NEW QUESTION # 19

.....

The ITIL-4-Practitioner-Deployment-Management PDF file contains the real, valid, and updated Peoplecert ITIL-4-Practitioner-Deployment-Management exam practice questions. These are the real ITIL-4-Practitioner-Deployment-Management exam questions that surely will appear in the upcoming exam and by preparing with them you can easily pass the final exam. The ITIL-4-Practitioner-Deployment-Management PDF Questions file is easy to use and install. You can use the ITIL-4-Practitioner-Deployment-Management PDF practice questions on your laptop, desktop, tabs, or even on your smartphone and start ITIL-4-

Practitioner-Deployment-Management exam preparation right now.

**ITIL-4-Practitioner-Deployment-Management Exam Voucher:** <https://www.dumpstests.com/ITIL-4-Practitioner-Deployment-Management-latest-test-dumps.html>

All versions for the ITIL-4-Practitioner-Deployment-Management training materials have free demo, If you buy our ITIL-4-Practitioner-Deployment-Management torrent vce, we promise that you only need twenty to thirty hours practice to pass the ITIL 4 Practitioner: Deployment Management online test engine and get the ITIL Practitioner Level certificate, Now, if you have no idea how to prepare for the ITIL-4-Practitioner-Deployment-Management actual exam, our ITIL-4-Practitioner-Deployment-Management exam reviews dumps can provide you with the most valid study materials, You must have tried the free demo of the ITIL-4-Practitioner-Deployment-Management study guide.

Use time remapping and the Layer panel to retim footage dynamically, Yes this valid, All versions for the ITIL-4-Practitioner-Deployment-Management training materials have free demo, If you buy our ITIL-4-Practitioner-Deployment-Management Torrent vce, we promise that you only need twenty to thirty hours practice to pass the ITIL 4 Practitioner: Deployment Management online test engine and get the ITIL Practitioner Level certificate.
