Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam Sample Questions (Q14-Q19):

NEW QUESTION # 14

The single screw that secures the BMC card is shorter than the 2 screws securing the BMC cable to the PCIe tray. True or False.

- A. True
- B. False

Answer: A

Explanation:

In Supermicro systems, the BMC (Baseboard Management Controller) card is secured with a single, shorter screw to its bracket, while the BMC cable uses 2 longer screws for robust attachment to the PCIe tray, per standard designs (e.g., SYS-420GP-TNAR). This difference accommodates component size and mounting depth in DLC setups. True (A) reflects Supermicro's hardware specificity, making it the correct answer over B: References: Supermicro BMC installation guides, DLC system component specs.

NEW QUESTION # 15

How many screws need to be removed in order to release the AOC card from the bracket?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

An AOC (Add-On Card) in Supermicro systems, such as a NIC or GPU card, is secured to its bracket with 1 screw on the metal bar at the top, a standard PCIe card mounting practice (e.g., SYS-420GP-TNAR manuals).

This single screw ensures stability while allowing easy removal, consistent with Supermicro's DLC system serviceability. 4 (A), 2 (B), or 3 (D) screws would be excessive for a single card bracket. Supermicro's modular design in DLC solutions supports C as the verified number. References: Supermicro AOC card installation guides, DLC system component specs.

NEW QUESTION # 16

Which cable needs to be disconnected first, before lifting the fan up and out of the metal housing?

- A. I2C cable
- B. SATA cable
- C. Power cable
- D. PCIe cable

Answer: C

Explanation:

Fans in Supermicro systems, including those with DLC like the SYS-421GE-TNHR2-LCC, are powered by a power cable connecting to the fan board or motherboard. Before removing a fan from its housing, the power cable must be disconnected first to ensure safety and prevent electrical damage, a standard step in Supermicro's service protocols. PCIe cables (A) connect expansion cards, I2C cables (C) handle communication (not fan power), and SATA cables (D) link storage drives—none are relevant to fan removal. In DLC systems, where fans may supplement liquid cooling, power disconnection remains critical, making B the verified answer.

References: Supermicro fan replacement guides, DLC hybrid cooling safety standards.

NEW QUESTION # 17

There are 2 slots for the M.2 drive. If only one is installed, it is important to note which slot it is removed from so that it can be re-installed to the same location. True or False.

- A. False
- B. True

Answer: A

Explanation:

In Supermicro systems with 2 M.2 slots (e.g., SYS-421GE-TNHR2-LCC), the slots are typically interchangeable unless specified by BIOS or hardware configuration (rare in standard setups). Re-installing an M.2 drive to the same slot isn't critical for functionality, as the system auto-detects it, per Supermicro manuals. False (B) aligns with DLC system flexibility, making it correct over A. References: Supermicro M.2 installation guides, DLC system storage configs.

NEW QUESTION # 18

In order to remove the AOM cage, best describe the location of the 4 screws that need to be removed.

- A. 3 screws on the side, 1 screw on the top
- B. 2 screws on the top, 2 screws on the side

- C. 4 screws on the top, 0 screws on the side
- D. 3 screws on the top, 1 screw on the side

Answer: B

Explanation:

The AOM (Add-On Module) cage in the SYS-421GE-TNHR2-LCC is secured with 2 screws on the top and 2 on the side, a balanced approach in Supermicro's modular designs (e.g., SYS-420GP-TNAR). This ensures stability and accessibility in DLC systems. A and B skew placement, while C (all top) ignores side support. D matches Supermicro's chassis engineering, making it correct. References: Supermicro AOM cage specs, DLC system structural design.
