

Valid 100% Free AWS-Solutions-Architect-Associate— 100% Free New Braindumps Sheet | AWS-Solutions- Architect-Associate Exam Simulations

P.S. Free & New AWS-Solutions-Architect-Associate dumps are available on Google Drive shared by PracticeDump:
<https://drive.google.com/open?id=1ber53n4pt5SDdq0-ygrQZqkljYx05Vuu>

Our customer service is available all day, and your problems can be solved efficiently at any time. Last but not least, we can guarantee the security of the purchase process of AWS-Solutions-Architect-Associate Test Questions and the absolute confidentiality of customer information. You do not have to worry about these issues, because we know that this is a basic condition for us to establish a good business model. If you have any questions, you can always contact us online or email us. We will reply as soon as possible.

To prepare for the AWS-Solutions-Associate exam, candidates must have a strong understanding of AWS services, architectures, and best practices. They must also have hands-on experience with AWS, as the exam tests the ability to apply theoretical concepts in practical scenarios. AWS recommends that candidates have at least one year of hands-on experience designing and deploying scalable, highly available, and fault-tolerant systems on AWS before taking the exam.

The AWS-Solutions-Associate certification is an entry-level certification that is ideal for IT professionals who are new to AWS cloud computing or who have some experience but are looking to expand their knowledge and skills. It is also a great certification for those who are looking to validate their skills and knowledge to potential employers or clients.

Free PDF 2025 Efficient Amazon AWS-Solutions-Architect-Associate: AWS Certified Solutions Architect - Associate (SAA-C02) New Braindumps Sheet

Our experts have great familiarity with AWS-Solutions-Architect-Associate real exam in this area. With passing rate up to 98 to 100 percent, we promise the profession of them and infallibility of our AWS-Solutions-Architect-Associate practice materials. So you won't be pestered with the difficulties of the exam any more. What is more, our AWS-Solutions-Architect-Associate Exam Dumps can realize your potentiality greatly. Unlike some irresponsible companies who churn out some AWS-Solutions-Architect-Associate

study guide, we are looking forward to cooperate fervently.

The AWS-Solutions-Associate exam is a challenging but rewarding certification exam for IT professionals looking to validate their skills in designing and deploying scalable systems on AWS. With the right preparation and training, candidates can successfully pass the exam and earn the AWS Certified Solutions Architect - Associate (SAA-C02) certification, which can lead to new career opportunities and higher salaries.

Amazon AWS Certified Solutions Architect - Associate (SAA-C02) Sample Questions (Q586-Q591):

NEW QUESTION # 586

A company is creating a three-tier web application consisting of a web server, an application server, and a database server. The application will track GPS coordinates of packages as they are being delivered. The application will update the database every 0-5 seconds.

The tracking will need to read as fast as possible for users to check the status of their packages. Only a few packages might be tracked on some days, whereas millions of package might be tracked on other days.

Tracking will need to be searchable by tracking ID customer ID and order ID. Order than 1 month no longer read to be tracked.

What should a solution architect recommend to accomplish this with minimal cost of ownership?

- A. Use an Amazon RDS Reserved Instance with Provisioned IOPS (PIOPS). Enable Amazon CloudWatch alarms to send notification when PIOPS are exceeded. Increase and decrease PIOPS as needed.
- B. Use an Amazon RDS On-Demand instance with Provisioned IOPS (PIOPS). Enable Amazon CloudWatch alarms to send notifications when PIOPS are exceeded. Increase and decrease PIOPS as needed.
- **C. Use Amazon DynamoDB with global secondary indexes. Enable Auto Scaling on the DynamoDB table and the global secondary indexes. Enable TTL on the DynamoDB table.**
- D. Use Amazon DynamoDB Enable Auto Scaling on the DynamoDB table. Schedule an automatic deletion script for items older than 1 month.

Answer: C

NEW QUESTION # 587

A company is building an application in the AWS Cloud. The application will store data in Amazon S3 buckets in two AWS Regions. The company must use an AWS Key Management Service (AWS KMS) customer managed key to encrypt all data that is stored in the S3 buckets. The data in both S3 buckets must be encrypted and decrypted with the same KMS key. The data and the key must be stored in each of the two Regions.

Which solution will meet these requirements with the LEAST operational overhead?

- A. Create a customer managed KMS key and an S3 bucket in each Region. Configure the S3 buckets to use server-side encryption with AWS KMS keys (SSE-KMS). Configure replication between the S3 buckets.
- B. Create an S3 bucket in each Region. Configure the S3 buckets to use server-side encryption with Amazon S3 managed encryption keys (SSE-S3). Configure replication between the S3 buckets.
- C. Create a customer managed KMS key and an S3 bucket in each Region. Configure the S3 buckets to use server-side encryption with Amazon S3 managed encryption keys (SSE-S3). Configure replication between the S3 buckets.
- **D. Create a customer managed multi-Region KMS key. Create an S3 bucket in each Region. Configure replication between the S3 buckets. Configure the application to use the KMS key with client-side encryption.**

Answer: D

Explanation:

From <https://docs.aws.amazon.com/kms/latest/developerguide/custom-key-store-overview.html> For most users, the default AWS KMS key store, which is protected by FIPS 140-2 validated cryptographic modules, fulfills their security requirements. There is no need to add an extra layer of maintenance responsibility or a dependency on an additional service. However, you might consider creating a custom key store if your organization has any of the following requirements: Key material cannot be stored in a shared environment. Key material must be subject to a secondary, independent audit path. The HSMs that generate and store key material must be certified at FIPS 140-2 Level 3.

<https://docs.aws.amazon.com/kms/latest/developerguide/custom-key-store-overview.html>

<https://docs.aws.amazon.com/kms/latest/developerguide/multi-region-keys-overview.html>

NEW QUESTION # 588

An EC2 instance is connected to an ENI (Elastic Network Interface) in one subnet. What happens when you attach an ENI of a different subnet to this EC2 instance?

- A. Not possible, cannot be connected to 2 ENIs
- B. The EC2 instance follows the rules of the older subnet
- C. The EC2 instance follows the rules of the newer subnet
- **D. The EC2 instance follows the rules of both the subnets**

Answer: D

Explanation:

AWS allows you create an elastic network interface (ENI), attach an ENI to an EC2 instance, detach an ENI from an EC2 instance and attach this ENI to another EC2 instance. The attributes of a network traffic follow the ENI which is attached to an EC2 instance or detached from an EC2 instance. When you move an ENI from one EC2 instance to another, network traffic is redirected to the new EC2 instance. You can create and attach additional ENIs to an EC2 instance.

Attaching multiple network interfaces (ENIs) to an EC2 instance is useful to:

Create a management network.

Use network and security appliances in your VPC.

Create dual-homed instances with workloads/roles on distinct subnets

Create a low-budget, high-availability solution.

Reference: <http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/using-eni.html>

NEW QUESTION # 589

A company stores sales transaction data in Amazon DynamoDB tables. To detect anomalous behaviors and respond quickly, all changes to the items stored in the DynamoDB tables must be logged within 30 minutes.

Which solution meets the requirements?

- **A. Use event patterns in Amazon CloudWatch Events to capture DynamoDB API call events with an AWS Lambda function as a target to analyze behavior. Send SNS notifications when anomalous behaviors are detected.**
- B. Use AWS CloudTrail to capture all the APIs that change the DynamoDB tables. Send SNS notifications when anomalous behaviors are detected using CloudTrail event filtering.
- C. Use Amazon DynamoDB Streams to capture and send updates to AWS Lambda. Create a Lambda function to output records to Amazon Kinesis Data Streams. Analyze any anomalies with Amazon Kinesis Data Analytics. Send SNS notifications when anomalous behaviors are detected.
- D. Copy the DynamoDB tables into Apache Hive tables on Amazon EMR every hour and analyze them for anomalous behaviors. Send Amazon SNS notifications when anomalous behaviors are detected.

Answer: A

NEW QUESTION # 590

A company is deploying a new two-tier web application in AWS. The company has limited staff and requires high availability, and the application requires complex queries and table joins. Which configuration provides the solution for the company's requirements?

- **A. Amazon RDS for MySQL with Multi-AZ**
- B. Amazon DynamoDB
- C. MySQL Installed on two Amazon EC2 Instances in a single Availability Zone
- D. Amazon ElastiCache

Answer: A

Explanation:
