Trustable Valid 1Z0-1061-24 Exam Forum & Leading Offer in Qualification Exams & Latest updated 1Z0-1061-24: Oracle CX Sales 2024 Implementation Professional

With these real 1Z0-1061-24 Questions, you can prepare for the test while sitting on a couch in your lounge. Whether you are at home or traveling anywhere, you can do 1Z0-1061-24 exam preparation with our Oracle 1Z0-1061-24 dumps. 1Z0-1061-24 test candidates with different learning needs can use our three formats to meet their needs and prepare for the Oracle 1Z0-1061-24 test successfully in one go. Read on to check out the features of these three formats.

Oracle CX Sales 2024 Implementation Professional Sample Questions (Q31-Q36):

NEW QUESTION # 31

Which of the following is a best practice for implementing Oracle Profitability and Cost Management Cloud Service (PCMCS) in a business scenario?

- A. Use a flat file format instead of a relational database for data storage
- **B. Use Activity-Based Costing (ABC) to allocate costs**
- C. Implement PCMCS as the sole source of financial data for the organization
- D. Ignore data mapping and transformation requirements before loading data into PCMCS

Answer: B

Explanation:

Option 1: Correct. Using Activity-Based Costing (ABC) to allocate costs is a best practice in implementing Oracle PCMCS. ABC provides a more accurate allocation of costs by identifying activities that consume resources and assigning costs accordingly. Option 2: Incorrect. Implementing PCMCS as the sole source of financial data for the organization may not be feasible or practical. PCMCS is typically used in conjunction with other financial systems to provide detailed cost and profitability analysis. Option 3: Incorrect. Ignoring data mapping and transformation requirements before loading data into PCMCS can result in incorrect or inconsistent data. Data mapping and transformation are essential steps in ensuring data quality and accuracy. Option 4: Incorrect. Using a flat file format instead of a relational database for data storage may limit the scalability and performance of PCMCS. Relational databases are better suited for handling large volumes of data and complex queries.

NEW QUESTION # 32

Which of the following statements accurately describes the difference between a dimension and a member in Oracle Profitability and Cost Management Cloud Service (PCMCS)?

- **A. A dimension is a category or characteristic that provides context for a member, while a member is a specific instance or data point within a dimension.**
- B. A dimension is used for metadata management, while a member is used for data input.
- C. A dimension and a member are the same thing and can be used interchangeably in PCMCS
- D. A dimension is a specific instance within a member, while a member is a category or characteristic that provides context for a dimension.

Answer: A

Explanation:

Option 1: This option is the correct answer as it accurately describes the difference between dimensions and members in PCMCS. A dimension is a category or characteristic that provides context, while a member is a specific instance or data point within that category or characteristic. Option 2: This option is incorrect as it describes the opposite relationship between dimensions and members. Option 3: This option is incorrect as dimensions and members are not the same thing and cannot be used interchangeably. They have distinct roles and functions in PCMCS. Option 4: This option is incorrect as dimensions and members are both used for metadata management and data input in PCMCS. The statement incorrectly suggests that they have different uses.

NEW QUESTION # 33

Which of the following features of Oracle Profitability and Cost Management Cloud Service provides the ability to view and analyze profitability and cost data in real time, while also allowing users to create custom reports and dashboards for their specific needs?

- A. Allocations
- **B. Reporting and Analytics**
- C. Data Aggregation
- D. Data Integration

Answer: B

Explanation:

Option 1: Data Integration refers to the process of pulling data from various sources and into the application. Although this feature is important in aggregating data and making it available for analysis, it does not provide the ability to analyze it in real time or create custom reports and dashboards. Option 2: The Allocations feature is used to allocate costs from one entity to another. While this feature is essential for accurately apportioning expenses, it does not provide real-time analysis or customizable reporting. Option 3: Reporting and Analytics is the correct answer. This feature allows users to view and analyze profitability and cost data in real-time. It

also provides customizable reporting and dashboard creation for specific needs. This feature can be accessed using the web interface or via Oracle Business Intelligence Enterprise Edition (OBIEE). Option 4: Data Aggregation refers to the process of combining data from different sources and summarizing it into meaningful information. This feature is important for providing a complete picture of profitability and costs but it does not provide the ability to analyze it in real time or customize reporting.

NEW QUESTION # 34

Which option is used to integrate Oracle Profitability and Cost Management Cloud Service with external applications?

- A. Oracle Hyperion Financial Management
- B. Oracle Enterprise Manager
- C. Web Data Entry
- **D. Oracle Data Integrator**

Answer: D

Explanation:

Option 1: Correct: Oracle Data Integrator is a comprehensive data integration platform that enables seamless integration between Oracle Profitability and Cost Management Cloud Service and other applications. Option 2: Incorrect: Oracle Enterprise Manager is a centralized management tool for Oracle software stack, but it is not specifically designed for integrating Oracle Profitability and Cost Management Cloud Service with external applications. Option 3: Incorrect: Web Data Entry is a feature within Oracle Profitability and Cost Management Cloud Service that allows users to manually enter data, but it does not provide integration capabilities with external applications. Option 4: Incorrect: Oracle Hyperion Financial Management is a separate Oracle product for financial consolidation and reporting, and it does not directly integrate with Oracle Profitability and Cost Management Cloud Service.

NEW QUESTION # 35

When creating dimensions in Oracle Profitability and Cost Management Cloud Service 2023, which of the following statements is true?

- A. Dimensions are only used for reporting purposes and do not impact the calculation logic
- **B. Creating a large number of dimensions can negatively impact performance and system resources.**
- C. Dimensions can only be created using the graphical user interface (GUI) and cannot be imported or exported.
- D. Hierarchies within dimensions can only have a maximum of five levels.

Answer: B

Explanation:

Option 1: Incorrect. Dimensions in Oracle Profitability and Cost Management Cloud Service 2023 not only impact reporting, but they also play a critical role in the calculation logic. They define the structure and organization of the data being calculated. Option 2: Correct. Creating a large number of dimensions can negatively impact performance and system resources. It is recommended to carefully consider the number and complexity of dimensions to optimize system performance. Option 3: Incorrect. Hierarchies within dimensions can have more than five levels in Oracle Profitability and Cost Management Cloud Service 2023. The number of levels can be customized based on the specific requirements of the business. Option 4: Incorrect. Dimensions in Oracle Profitability and Cost Management Cloud Service 2023 can be created using both the graphical user interface (GUI) and also imported or exported using various data formats such as CSV or Excel.
