

Valid 1Z0-1084-25 New Cram Materials Help You to Get Acquainted with Real 1Z0-1084-25 Exam Simulation

What's more, part of that ITExamSimulator 1Z0-1084-25 dumps now are free: <https://drive.google.com/open?id=1AkGMD5IqgUdskV70PGYxN5sQYAWMhmy>

Through the feedback of many examinees who have used ITExamSimulator's training program to pass some IT certification exams, it proves that using ITExamSimulator's products to pass IT certification exams is very easy. Recently, ITExamSimulator has developed the newest training solutions about the popular Oracle Certification 1Z0-1084-25 Exam, including some pertinent simulation tests that will help you consolidate related knowledge and let you be well ready for Oracle certification 1Z0-1084-25 exam.

There is no denying that no exam is easy because it means a lot of consumption of time and effort. Especially for the upcoming 1Z0-1084-25 exam, although a large number of people to take the exam every year, only a part of them can pass. If you are also worried about the exam at this moment, please take a look at our 1Z0-1084-25 Study Materials which have become the leader in this career on the market. And if you have a try on our 1Z0-1084-25 preparation quiz, you will be satisfied.

Latest Oracle 1Z0-1084-25 Exam Review - 1Z0-1084-25 Valid Test

Braindumps

Good site produces high-quality 1Z0-1084-25 reliable dumps torrent. If you decide to purchase relating products, you should make clear if this company has power and if the products are valid. 1Z0-1084-25 reliable dumps torrent. Some companies have nice sales volume by low-price products, their questions and answers are collected in the internet, it is very inexact. If you really want to pass exam one-shot, you should take care about that. High-quality Oracle 1Z0-1084-25 Reliable Dumps torrent with reasonable price should be the best option for you.

Oracle Cloud Infrastructure 2025 Developer Professional Sample Questions (Q58-Q63):

NEW QUESTION # 58

You have created a repository in Oracle Cloud Infrastructure Registry (OCIR) in the us-ashburn-1 (iad) region in your tenancy with the heyoci namespace. Which three are valid tags for an image named myapp? (Choose three.)

- A. iad.ocir.io/heyoci/myapp:0.0.2-beta
- B. iad.ocir.io/heyoci/myproject/myapp:0.0.1
- C. us-ashburn-1.ocir.io/heyoci/myapp:0.0.2-beta
- D. iad.ccir.io/heyoci/myapp:latest
- E. us-ashburn-1.ocir.io/heyoci/myproject/myapp:0.0.2-beta
- F. us-ashburn-1.ocir.io/myproject/heyoci/myapp:latest

Answer: B,D,E

Explanation:

(OPT) iad.ocir.io/myproject/heyoci/myapp:latest The three valid tags for an image named myapp in the heyoci namespace of the Oracle Cloud Infrastructure Registry (OCIR) in the us-ashburn-1 (iad) region are: iad.ccir.io/heyoci/myapp:latest This tag specifies the latest version of the myapp image in the heyoci namespace in the iad region. iad.ocir.io/heyoci/myapp:0.0.2-beta This tag specifies version 0.0.2-beta of the myapp image in the heyoci namespace in the iad region. us-ashburn-1.ocir.io/heyoci/myapp:0.0.2-beta This tag specifies version 0.0.2-beta of the myapp image in the heyoci namespace in the us-ashburn-1 region. The other options mentioned are not valid tags for the given scenario: us-ashburn-1.ocir.io/heyoci/myapp:0.0.2-beta (incorrect format, missing the namespace) iad.ocir.io/myproject/heyoci/myapp:latest (incorrect format, incorrect order of namespace and project) us-ashburn-1.ocir.io/myproject/heyoci/myapp:latest (incorrect format, incorrect order of namespace and project) The correct format for tagging an image in OCIR is <region>.ocir.io/<namespace>/<repository>:<tag>.

NEW QUESTION # 59

As a Cloud Native developer, you develop two services in Node.js and deploy them to two different Container Engine for Kubernetes (OKE) clusters that use the same Virtual Cloud Network (VCN). Your security team wants to analyze the network communication between them. How can this requirement be met in the most cost-effective way?

- A. Deploy a third-party logging service and aggregate the network flow logs.
- B. Rewrite the application and send the application logs to an outside log aggregator.
- C. Use the OCI Logging service and enable VCN flow logs.
- D. Deploy Wireshark and intercept the packets.

Answer: C

Explanation:

The best answer is: "Use the OCI Logging service and enable VCN flow logs." To meet the requirement of analyzing network communication between two services deployed in different Container Engine for Kubernetes (OKE) clusters within the same Virtual Cloud Network (VCN) in a cost-effective way, you can use the OCI Logging service and enable VCN flow logs. The VCN flow logs feature in OCI allows you to capture and log network traffic information for your VCN resources. By enabling VCN flow logs, you can monitor and analyze the network communication between your services without the need for additional third-party logging services or tools. Enabling VCN flow logs provides visibility into the network traffic, including source and destination IP addresses, ports, protocols, and other relevant details. This information can be collected and stored in the OCI Logging service, where you can analyze and gain insights into the network communication patterns between your services. By leveraging the built-in capabilities of the OCI Logging service and enabling VCN flow logs, you can fulfill the security team's requirement for network communication analysis in a cost-effective manner. This eliminates the need for deploying additional third-party logging services or tools, reducing complexity and potential costs associated with their setup and maintenance. The other options mentioned are not the most cost-effective or

suitable solutions for analyzing network communication in this scenario: Deploying a third-party logging service and aggregating the network flow logs would introduce additional costs and complexity, which may not be necessary considering the built-in capabilities provided by OCI. Rewriting the application to send logs to an outside log aggregator would not directly address the requirement of analyzing network communication between the services. It would focus more on application-level logs rather than network-level analysis. Deploying Wireshark and intercepting packets would require additional infrastructure setup and maintenance, which may not be the most cost-effective approach for network analysis in this scenario.

NEW QUESTION # 60

You are developing a microservices application that will be a consumer of the Oracle Cloud Infrastructure (OCI) Streaming service. Which API method should you use to read and process a stream?

- A. ReadStream
- **B. GetMessages**
- C. GetStream
- D. ReadMessages
- E. ProcessStream

Answer: B

Explanation:

The correct API method to read and process a stream in the Oracle Cloud Infrastructure (OCI) Streaming service is "GetMessages". When consuming messages from a stream in OCI Streaming, you use the "GetMessages" API method. This method allows you to retrieve a batch of messages from the stream for processing. You can specify parameters such as the number of messages to retrieve, the maximum size of the messages, and the timeout for the request. By using the "GetMessages" API method, you can retrieve messages from the stream and then process them in your microservices application. This allows you to consume and handle the data in real-time as it becomes available in the stream. The "GetMessages" method provides flexibility in how you consume and process the messages, enabling you to implement custom logic and workflows based on your specific application requirements.

NEW QUESTION # 61

In the shared responsibility model, who should perform patching, upgrading, and maintaining of the worker nodes in provisioned Oracle Container Engine for Kubernetes (OKE) clusters?

- A. It is an automated process.
- **B. It is the responsibility of the customer.**
- C. Oracle Support does it.

Answer: B

Explanation:

In the shared responsibility model, Oracle is responsible for securing the underlying cloud infrastructure and platform services, while customers are responsible for securing their data and applications within the cloud⁴. For provisioned OKE clusters, Oracle manages the control plane (master nodes) of the Kubernetes cluster, while customers manage the data plane (worker nodes) of the cluster⁵. Therefore, it is the responsibility of the customer to perform patching, upgrading, and maintaining of the worker nodes in provisioned OKE clusters⁵. Customers can use tools such as Terraform or kubectl to automate these tasks⁵.

NEW QUESTION # 62

Which "Action Type" option is NOT available in an Oracle Cloud Infrastructure (OCI) Events rule definition?

- A. Streaming
- **B. Email**
- C. Functions
- D. Notifications

Answer: B

Explanation:

An action is a response that you define for the rule to perform when the filter finds a matching event¹. The action type specifies the

service that you want to invoke by delivering the event message1. The following action types are available in OCI Events rule definition1:

Streaming: Send to a stream from Oracle Streaming Service.

Notifications: Send to an Oracle Notification Service topic.

Functions: Send to an Oracle Functions Service endpoint. Email is not a valid action type for OCI Events rule definition. To send an email as an action, you need to use the Notifications service and subscribe to a topic with an email protocol2.

NEW QUESTION # 63

.....

We update our 1Z0-1084-25 Test Prep within one year and you will download free which you need. After one year, we provide the client 50% discount benefit if buyers want to extend their service warranty so you can save much money. If you are the old client, you can enjoy some certain discount when buying 1Z0-1084-25 exam torrent so you can enjoy more service and more benefits. Our update can provide the latest and most useful Oracle Cloud Infrastructure 2025 Developer Professional prep torrent to you and you can learn more and master more. Because we update frequently, the client can understand the latest change and trend in the theory and the practice. So you will benefit from the update a lot.
