Get 2025 Update VCP-VCF 2V0-17.25 Dumps To Study The Latest Questions

flexibility: Can be deployed in a Simple or Highly Available Cluster deployment. Recommended deployment is a HA Cluster.... Simple deployment is for test/dev environments, it is not for production use cases."

By contrast, HA/clustered models increase resources to provide redundancy at scale. Since the requirement is the smallest resource footprint, the Simple model is the correct selection. (Stretched/Continuous Availability options are not listed VCF Operations models in this context.)

6.An administrator is tasked to deploy a new vSAN Storage Cluster to an existing VCF instance. The VCF instance is deployed as a single workload domain.

What must the administrator do to achieve this without deploying additional management components?

- A. Deploy an additional VCF instance and workload domain with a vSAN storage cluster.
- B. Deploy additional hosts as vSAN storage-only nodes within the existing cluster.
- C. Deploy a second cluster as a vSAN storage cluster in the existing workload domain.
- D. Deploy an additional workload domain with a vSAN storage cluster within the existing VCF instance.

Answer: C

Explanation:

Comprehensive and Detailed

The VCF 9.0 Architecture and Deployment Guide explains that within a single Workload Domain, administrators can scale resources by adding additional clusters, including compute or vSAN storage clusters. Specifically, "A Workload Domain can contain multiple clusters. You can deploy a new cluster, such as a vSAN cluster, into an existing domain without introducing new management components." . Options A and D both introduce new workload domains or VCF instances, which require their own management stack (vCenter, NSX Manager, etc.) and are unnecessary in this scenario. Option B is incorrect because "vSAN storage-only nodes" are supported in vSAN but are not the method for adding a new cluster within VCF automation. The correct approach is deploying a second cluster inside the same workload domain—this reuses the existing management components while meeting the requirement for a new vSAN storage cluster.

7.Which two types of group can be created to collect and manage objects in Istio Service Mesh? (Choose two.)

- A. Security
- B. Cluster
- C. Service
- D. API
- E. Node

Answer: B, C

Explanation:

Comprehensive and Detailed

The Istio integration in VCF 9.0 defines two main logical groupings for organizing workloads within a service mesh: Cluster groups and Service groups. The documentation notes: "Cluster groups allow you to organize and manage objects across different Kubernetes clusters. Service groups let you aggregate and manage services that share common policies, routing rules, or observability requirements." . These groups enable administrators to apply consistent service mesh policies across multiple deployments and clusters. They also simplify administration by centralizing traffic management, routing,

For this task, you need to update VMware 2V0-11.24 preparation material to get success. If applicants fail to find reliable material, they fail the VMware 2V0-11.24 examination. Failure leads to loss of money and time. You just need to rely on ActualVCE to avoid these losses. ActualVCE has launched three formats of real VMware 2V0-11.24 Exam Dumps.

VMware 2V0-11.24 Exam Syllabus Topics:

Topic	Details
Topic 1	Developer Fundamentals: This section of the exam measures the skills of Salesforce Developers and covers key concepts such as multi-tenant architecture, MVC framework, and the Lightning Component Framework. It evaluates the ability to differentiate between declarative and programmatic customization approaches while considering governor limits, formula fields, and roll-up summaries. Candidates must demonstrate proficiency in defining data models, including objects, fields, relationships, and external IDs. Additionally, they should understand the best practices for importing and exporting data within development environments.

Topic 2	• User Interface: This section of the exam measures the skills of Lightning Developers and covers UI customization using Visualforce pages, Lightning Components, and Flow. Candidates must understand how to securely display and modify Salesforce data through controllers or extensions while ensuring protection against security vulnerabilities. The section also evaluates knowledge of Lightning Web Components, event handling, and best practices for creating custom UI components. Additionally, it assesses the ability to integrate Apex with various UI elements such as Lightning Components, Flow, and Next Best Actions.
Topic 3	• Process Automation and Logic: This section of the exam measures the skills of Apex Developers and focuses on the capabilities of declarative process automation tools and Apex programming. It includes defining variables, constants, and methods while understanding the use of modifiers and interfaces. Candidates must be able to apply control flow statements, write SOQL, SOSL, and DML statements, and follow best practices for Apex classes and triggers. The section also assesses knowledge of governor limits, transaction management, execution order, and recursion. Additionally, candidates should be able to implement error handling using standard and custom exceptions.
Topic 4	• Testing, Debugging, and Deployment: This section of the exam measures the skills of Salesforce DevOps Engineers and focuses on writing and executing tests for triggers, controllers, and automation processes. Candidates should understand how to utilize Salesforce Developer tools like Salesforce DX, CLI, and Developer Console for troubleshooting. The section also covers debugging strategies for monitoring flows, processes, and asynchronous jobs. Furthermore, it evaluates knowledge of different deployment environments, requirements, and best practices for releasing code and configurations efficiently.

Prep 2V0-11.24 Guide, New 2V0-11.24 Test Preparation

Among all substantial practice materials with similar themes, our 2V0-11.24 practice materials win a majority of credibility for promising customers who are willing to make progress in this line. With excellent quality at attractive price, our 2V0-11.24 practice materials get high demand of orders in this fierce market with passing rate up to 98 to 100 percent all these years. We shall highly appreciate your acceptance of our 2V0-11.24 practice materials and your decision will lead you to bright future with highly useful certificates. We have handled professional 2V0-11.24 practice materials for over ten years. Our experts have many years' experience in this particular line of business, together with meticulous and professional attitude towards jobs.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q63-Q68):

NEW QUESTION # 63

When configuring NSX, what type of certificate is necessary to ensure secure communication?

- A. CA-Signed
- B. Temporary
- C. Trial Certificates
- D. Self-Signed

Answer: A

Explanation:

CA-signed certificates are recommended for secure communication.

Trial certificates are not appropriate for production environments.

Temporary certificates are unsuitable for production use.

Self-signed certificates are not ideal for production environments.

NEW QUESTION # 64

Which feature of VMware Data Services Manager enhances database security and compliance?

- A. Database-Level Authentication
- B. Network traffic optimization

- C. Automated workload migration
- D. Storage replication

Answer: A

Explanation:

VMware Data Services Manager enhances database security and compliance by providing Database-Level Authentication, which ensures that access to databases is tightly controlled and that only authorized users can access sensitive database information. This is critical for maintaining security and compliance with industry standards and regulations.

NEW QUESTION # 65

When configuring a vSphere Namespace, what is a critical setting that must be established?

- A. Resource Limits
- B. Network Settings
- C. Backup Policies
- D. User Roles

Answer: A

Explanation:

Setting resource limits ensures that no single workload monopolizes resources.

User roles are important but secondary to resource limits.

Backup policies are configured separately from namespace creation.

Network settings must be checked but come after resource limits.

NEW QUESTION # 66

Which of the following are use cases for VMware NSX in a Cloud Foundation deployment? (Select all that apply)

- A. Data encryption
- B. Automated backups
- C. Cloud monitoring
- D. Micro-segmentation
- E. Load balancing

Answer: D,E

Explanation:

Load balancing: NSX provides load balancing capabilities that distribute traffic among multiple servers or services, improving application availability and performance.

Micro-segmentation: This is one of the primary use cases for NSX. It allows for granular security policies to be applied to individual workloads within the data center, helping to protect against lateral movement of threats.

Automated backups: While backups are essential for data protection, they are typically handled by backup solutions and are not a direct use case for NSX.

Data encryption: While NSX may support some aspects of network security, data encryption is generally handled at the storage or application level, rather than being a direct function of NSX.

Cloud monitoring: NSX does not specifically focus on monitoring; instead, it is primarily concerned with network virtualization and security.

NEW QUESTION # 67

What is a common method to monitor the performance of an NSX Edge Cluster?

- A. vRealize Operations
- B. PowerCLI Scripts
- C. Manual Checks
- D. NSX Manager Logs

Answer: A

vRealize Operations is commonly used for comprehensive monitoring. PowerCLI can automate some tasks but is not primarily for monitoring. Manual checks are not efficient for ongoing performance evaluation. Logs can provide insights but do not give real-time monitoring.
