Valid 2V0-17.25 Test Preparation | Latest 2V0-17.25 Version

Do you want to gain all these VMware Cloud Foundation 9.0 Administrator (2V0-17.25) certification exam benefits? Looking for the quick and complete 2V0-17.25 exam dumps preparation way that enables you to pass the 2V0-17.25 certification exam with good scores? If your answer is yes then you are at the right place and you do not need to go anywhere. Just download the TestKingIT 2V0-17.25 Questions and start 2V0-17.25 exam preparation without wasting further time.

VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.
Topic 2	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.
Topic 3	• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.
Topic 4	• VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.

Latest 2V0-17.25 Version | 2V0-17.25 Latest Exam Question

You will get a lot of personal and professional benefits after passing the VMware 2V0-17.25 test. The VMware 2V0-17.25 exam is a valuable credential that will assist you to advance your career. The VMware 2V0-17.25 is a way to increase your knowledge and skills. You can also trust on TestKingIT and start VMware Cloud Foundation 9.0 Administrator 2V0-17.25 test preparation with VMware 2V0-17.25 practice test material.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q50-Q55):

NEW QUESTION # 50
Which of the following are valid ways to integrate external storage arrays with a VMware environment?

- A. vVols for granular VM-level control on supported arrays
- B. Using iSCSI or FC adapters on ESXi hosts to connect to SAN LUNs
- C. In-guest NFS for file shares
- D. Combining vSAN and array-based storage in a single datastore

Answer: A,B

Explanation:
ESXi can use iSCSI/FC to connect to SAN LUNs (A), and vVols (C) provides per-VM management. In- guest NFS (B) is possible but not a typical approach for hosting VM disks. Combining vSAN and array- based storage (D) into a single datastore is not supported.

NEW QUESTION # 51
An administrator is tasked with creating a custom dashboard for the security team. The team has the following requirements:
Monitor the CPU, memory, and disk usage across all Virtual Machines (VMs) in a workload domain.
Export the data to CSV.
Which custom view in VMware Cloud Foundation (VCF) Operations meets these requirements?

- A. Scoreboard View
- B. Trend View
- C. List View
- D. Object Relationship View

Answer: C

Explanation:
The VCF 9.0 Operations Guide - Views and Reports explains the four types of views available for custom dashboards:
Object Relationship View: Displays dependencies and hierarchy between objects (for example, VMs, hosts, datastores) but does not provide exportable tabular data.
Scoreboard View: Provides a high-level KPI visualization of a few key objects but is not intended for large tabular exports.
List View (Correct): Displays tabular data across many objects, such as CPU, memory, and disk metrics for VMs. The guide states: "List views are useful when you want to compare metrics across multiple objects and can be exported to CSV for further analysis."
Trend View: Focuses on historical data and growth over time, but export to CSV is not its primary purpose.
Because the security team requires both tabular comparison of VM resource usage and the ability to export the data to CSV, the List View is the only option that meets both requirements.

NEW QUESTION # 52
When considering standardization in VMware environments, which of the following are aligned with industry or regulatory best practices?

- A. Role-based access control following ISO 27001 principles
- B. Regular audits and patching guided by ITIL processes
- C. CO2 emission compliance
- D. Hardening guides that align with NIST standards

Answer: A,B,D

Explanation:
NIST-based hardening guides, ISO 27001-aligned RBAC, and ITIL-driven audits and patching all intersect with VMware security and operational best practices. CO2 emissions (C) are environmental considerations, not typically covered under VMware's security/operational standards.

NEW QUESTION # 53
An administrator is responsible for managing a VMware Cloud Foundation (VCF)-based private cloud. The private cloud consists of a single organization with two projects, appdev and production.
The administrator has been tasked with ensuring that the following are standardized across all existing and new blueprints within the production project:
Inputs: size, os, location
Constants: salt master id
Which three actions should the administrator take to meet the objective? (Choose three.)

- A. Create a new Property Group containing all required properties for the production project.
- B. Create a new Property Group containing all input properties for the production project.
- C. Update all existing blueprints within the appdev project with the new Property Group(s).
- D. Update all blueprints within the organization to use the same locally configured inputs.
- E. Update all existing blueprints within the production project with the new Property Group(s).
- F. Create a new Property Group containing all constant properties for the production project.

Answer: B,E,F

Explanation:
The VCF 9.0 Automation Guide details the use of Property Groups to standardize blueprint inputs and constants across projects. Property Groups allow administrators to define sets of inputs (like size, os, location) and constants (like salt master id) centrally, ensuring consistency across deployments.
The correct actions are:
Create a new Property Group for input properties (C) to capture the standard inputs (size, os, location).
Create a new Property Group for constant properties (E) to include items like the salt master id.
Update all existing blueprints in the production project with the new Property Groups (F) to enforce standardization across new and existing workloads.
Options A and B are incorrect because changes are not required in the appdev project or across the entire organization-only the production project. Option D is redundant since inputs and constants should be separated into distinct groups.

NEW QUESTION # 54
After a migration to VCF 9.0, an administrator must import only logging data newer than 90 days from Aria Operations for Logs 8.x into VCF Operations for Logs. If VCF Operations for Logs has enough space available, what is the correct way to achieve this?

- A. Initiate the transfer from the Control Panel in VCF Operations.
- B. Initiate the transfer from Aria Operations for Logs.
- C. Import logs from an NFS archive used for Aria Operations for Logs.
- D. Configure log forwarding in Aria Operations for Logs.

Answer: A

Explanation:
VCF 9.0 introduces Log Data Transfer initiated from VCF Operations. The docs say: "You can transfer log data for up to 90 days from Aria Operations for Logs 8.x... The migrated logs are stored in VCF Operations for logs." and "To transfer logs... navigate to the Logs Data Transfer card in Administration > Control Panel... click the INITIATE TRANSFER button... You can select the duration of logs to transfer..." (emphasis added).
They further clarify that simple forwarding does not transfer already ingested logs: "Forward logs... does not transfer already ingested

logs. Transfer historical logs up to 90 days... using the Log Data Transfer feature in VCF Operations." Hence, the correct action is to initiate the transfer in VCF Operations (Administration > Control Panel > Logs Data Transfer).

NEW QUESTION # 55

......

There are rare products which can rival with our products and enjoy the high recognition and trust by the clients like our products. Our products provide the 2V0-17.25 study materials to clients and help they pass the test 2V0-17.25 certification which is highly authorized and valuable. Our company is a famous company which bears the world-wide influences and our 2V0-17.25 Study Materials are recognized as the most representative and advanced study materials among the same kinds of products. Whether the qualities and functions or the service of our product, are leading and we boost the most professional expert team domestically.
