# Valid 300-620 Test Question | 300-620 Exam Online

2025 Latest DumpsQuestion 300-620 PDF Dumps and 300-620 Exam Engine Free Share: https://drive.google.com/open?id=199qSb8-3pQE-2T2uCao6ZX6M_Mh8tQHL

Success in the Cisco 300-620 exam is impossible without proper 300-620 exam preparation. I would recommend you select DumpsQuestion for your 300-620 certification test preparation. DumpsQuestion offers updated Cisco 300-620 PDF Questions and practice tests. This 300-620 practice test material is a great help to you to prepare better for the final Cisco 300-620 exam. DumpsQuestion lates 300-620 exam dumps are one of the most effective Cisco 300-620 Exam Preparation methods. These valid Cisco 300-620 exam dumps help you achieve better 300-620 exam results. World's highly qualified professionals provide their best knowledge to DumpsQuestion and create this Cisco 300-620 practice test material. Candidates can save time because 300-620 valid dumps help them to prepare better for the Cisco 300-620 test in a short time.

The DCACI exam consists of 65-75 multiple-choice questions and lasts for 90 minutes. Exam questions cover topics such as ACI fabric infrastructure, networking, automation, and security policies. 300-620 exam is a part of the Professional-level certification suite and is required for attaining the Cisco Certified Network Professional Data Center (CCNP Data Center) certification.

Understanding functional and technical aspects of Implementing Cisco Application Centric Infrastructure (300-620 DCACI) Host-Based Analysis

The following will be discussed in **CISCO 300-620 Exam Dumps**:

- Implement Layer 3 out (excludes transit routing and VRF route leaking)
- Implement Layer 2 out (STP/MCP basics)
- Drive agility with policy driven automation for cloud deployments
- Secure infrastructure with visibility and analytics to meet compliance
- Improve availability and scale ACI fabrics under a single policy domain

300-620 Exam Bootcamp & 300-620 Latest Dumps & 300-620 Study Materials

In order to ensure the quality of our 300-620 preparation materials, we specially invited experienced team of experts to write them. The content of our 300-620 practice engine comes from a careful analysis and summary of previous exam syllabus, so that you can accurately grasp the core test sites. At the same time, our proffesional experts are keeping a close eye on the changes of the exam questions and answers. So that our 300-620 Study Guide can be the latest and most accurate.

The 300-620 exam covers a range of topics, including ACI architecture, fabric infrastructure, policies, automation, and troubleshooting. Candidates are expected to have a deep understanding of these concepts and be able to apply them in real-world scenarios. 300-620 Exam consists of multiple-choice questions and simulation exercises that require candidates to demonstrate their proficiency in using ACI tools and techniques.

Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q10-Q15):

NEW QUESTION # 10
Which switch type is discovered first in the Cisco ACI fabric discovery process?

- A. distribution
- B. spine
- C. access
- D. leaf

Answer: D

Explanation:
The question asks which switch type is discovered first in the Cisco ACI fabric discovery process. The ACI fabric consists of spine and leaf switches, and the discovery process is a critical initial step to establish the fabric topology. Let's analyze this based on Cisco ACI documentation.
Requirement Analysis
The ACI fabric discovery process involves the Application Policy Infrastructure Controller (APIC) identifying and registering switches to form the network topology.
The process relies on protocols like Link Layer Discovery Protocol (LLDP) and Cisco Discovery Protocol (CDP) to detect connected devices.
The sequence of discovery is determined by the physical connectivity and the role of switches in the fabric.
Option Evaluation
A . leaf:
In the Cisco ACI fabric, the discovery process begins with the leaf switches. When the APIC is powered on and connected to the fabric, it first discovers the leaf switches directly attached to it or other initial points of connectivity. Leaf switches are the access layer devices that connect endpoints and are the starting point for fabric topology discovery. Once leaf switches are identified, they assist in discovering the spine switches.
Reference:
B . access:
"Access" is not a specific switch type in the ACI fabric context. It may refer to external access switches, but these are not part of the initial fabric discovery process, which focuses on spine and leaf switches.
C . distribution:
"Distribution" is a traditional network layer, but it does not apply to the ACI fabric, which uses a spine-leaf architecture. This option is irrelevant.
D . spine:
Spine switches are discovered after the leaf switches because the leaf switches provide the connectivity path to the spines. The APIC uses the leaf switches to map the spine layer in the fabric topology.
Final Answer Justification
A is correct because the ACI fabric discovery process starts with the leaf switches. The APIC initially detects leaf switches connected to it or other initial points, and then uses this information to discover the spine switches, establishing the full fabric topology.
Primary Cisco Reference:
Cisco APIC Getting Started Guide, "Fabric Bring-Up and Discovery."
Cisco ACI Design Guide, "Fabric Discovery Process."

NEW QUESTION # 11

Refer to the exhibit. An engineer must implement the inter-tenant service graph. Which set of actions must be taken to accomplish this goal?

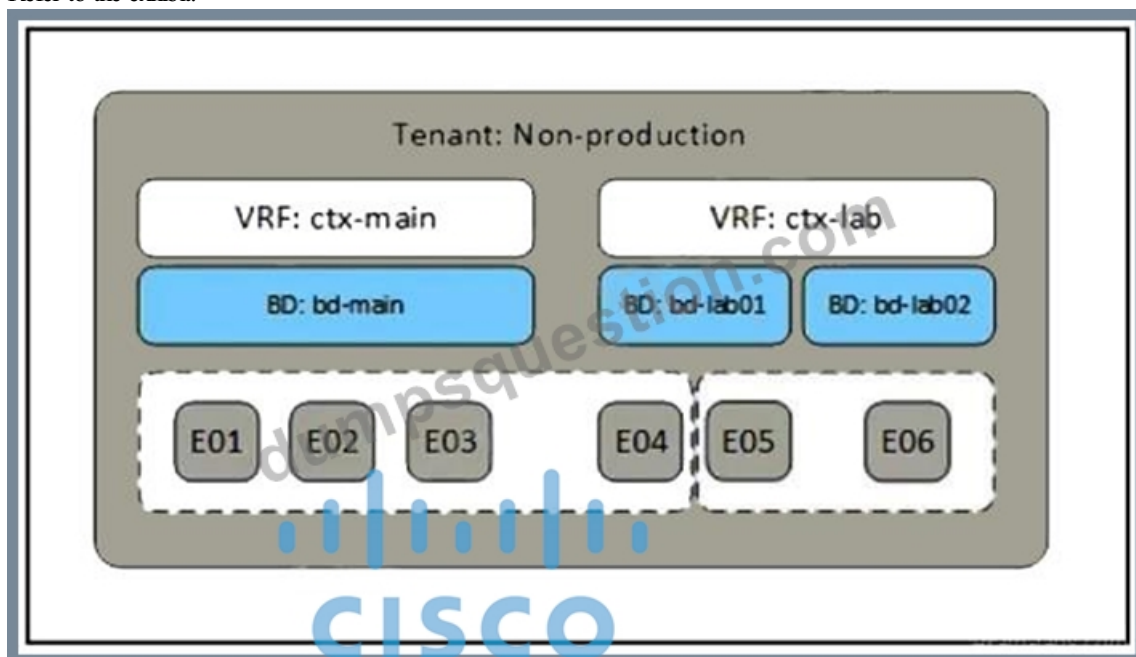

- A. - Define the contract in the provider tenant and export it to the consumer tenant.
  - Define the L4-L7 device and service graph template in the provider tenant and the ASA bridge domains in the consumer tenant.
- B. - Define the contract in the provider tenant and export it to the provider tenant.
  - Define the L4-L7 device, service graph template, and ASA bridge domains in the consumer tenant.
- C. - Define the contract in the provider tenant and export it to the consumer tenant.
  - Define the L4-L7 device, service graph template, and ASA bridge domains in the provider tenant.
- D. - Define the contract in the provider tenant and export it to the provider tenant.
  - Define the L4-L7 device and service graph template in the provider tenant and the ASA bridge domains in the consumer tenant.

Answer: C

NEW QUESTION # 12

Refer to the exhibit.

Refer to the exhibit. A network engineer must complete the Cisco ACI implementation based on the logical system design created by the systems architect. Which Cisco ACI object is required where the dotted line indicates to complete the task?

- A. contract
- B. attachable Access Entity Profile
- C. context
- D. application profile
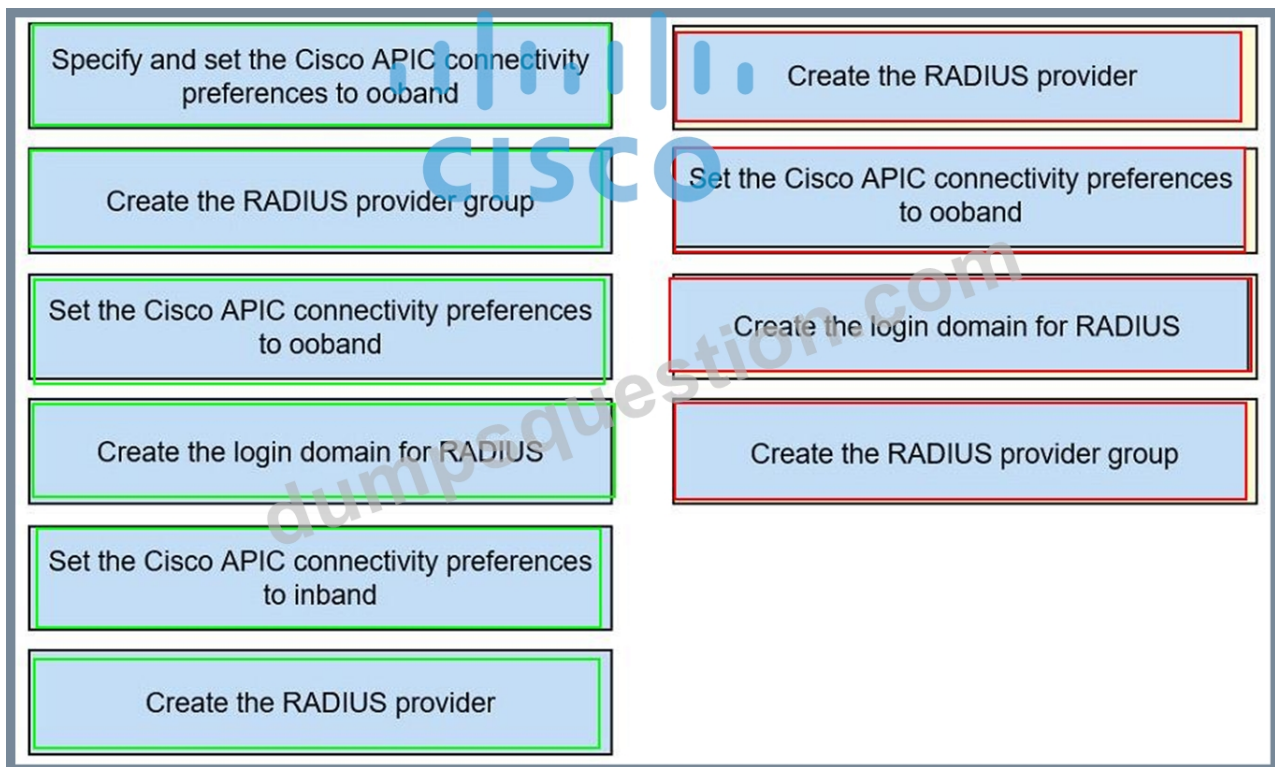

Answer: D

NEW QUESTION # 13
An engineer must configure RADIUS authentication with Cisco ACI for remote authentication with out-of-band management access. Drag and drop the RADIUS configuration steps from the left into the required implementation order on the right. Not all steps are used.

Specify and set the Cisco APIC connectivity preferences to ooband	step 1
Create the RADIUS provider group	step 2
Set the Cisco APIC connectivity preferences to ooband	step 3
Create the login domain for RADIUS	step 4
Set the Cisco APIC connectivity preferences to inband	
Create the RADIUS provider	

Answer:

Explanation:

Left column (green boxes):
- Specify and set the Cisco APIC connectivity preferences to ooband
- Create the RADIUS provider group
- Set the Cisco APIC connectivity preferences to ooband
- Create the login domain for RADIUS
- Set the Cisco APIC connectivity preferences to inband
- Create the RADIUS provider

Right column (red boxes):
- Create the RADIUS provider
- Set the Cisco APIC connectivity preferences to ooband
- Create the login domain for RADIUS
- Create the RADIUS provider group

NEW QUESTION # 14

Which statement regarding ACI Multi-Pod and TEP pool is true?

- A. The Pod1 TEP pool must be split and a portion of the TEP pool allocated to each Pod.
- B. The IP addresses used in the IPN network can overlap TEP pool of the APIC.
- C. The same TEP pool is used in all Pods.
- D. A different TEP pool must be assigned to each Pod.

Answer: D
