Answer: A

NEW QUESTION # 111

Refer to the exhibit. Which code snippet must be added to the blank in the script to create a new Cisco Webex space?

```
import requests
import json

url = 'https://api.ciscospark.com/v1/rooms'
access_token = 'TQxMjNjMWQyOTc4ZDUONzJmOTEtNjIx_PF84_leb65fdf-9643-417f-9974-ad72caede10f'
refresh_token = 'PF84_leb65fdf-9643-417f-9974-ad72caede10f_TOxMjNjMWQyOTc4ZDUONzJmOTEtNjIx'

room_title = 'My new Teams room'
```

```
response = requests.post(
    url,
    headers={'Authorization': 'Bearer ' + refresh_token,
            'Content-type': 'application/json;charset=utf-8'},
    data = json.dumps({'title': room_title})
)
```

• A.

```
response = requests.post(
    url,
    headers={'Authorization': 'Bearer ',
            'Content-type': 'application/json;charset=utf-8'},
    data = json.dumps({'title': room_title})
)
```

• B.

```
response = requests.put(
    url,
    headers={'Authorization': 'Bearer ' + access_token,
            'Content-type': 'application/json;charset=utf-8'},
    data = json.dumps({'title': room_title})
)
```

• C.

```
response = requests.post(
    url,
    headers={'Authorization': 'Bearer ' + access_token,
            'Content-type': 'application/json;charset=utf-8'},
    data = json.dumps({'title': room_title})
)
```

• D.

Answer: D

Explanation:

To create a new Webex space (room) using the Webex REST API, you must send a POST request to the /v1/rooms endpoint using a valid access token for authorization.

The correct code snippet is:

```

response = requests.post(
    url,
    headers={'Authorization': 'Bearer'+ access_token,
            'Content-type': 'application/json;charset=utf-8'},
    data = json.dumps({'title': room_title})
)

```

This uses the correct HTTP method (POST), authenticates with the correct token (access_token), and formats the JSON body properly with the required titlefield.

NEW QUESTION # 112
