- B. A next-hop-group can only specify one next-hop for forwarding
- C. Multiple static routes can use the same next-hop-group.
- D. The next-hop for a next-hop-group must be a local IP address.

Answer: C

NEW QUESTION # 24

Which of the following is NOT how prefixes are typically learned and advertised in a leaf and spine data center?

- A. Spine routers advertise learned prefixes to leaf routers directly using eBGP.
- B. Each leaf router learns the prefixes of remote servers from other leaf routers directly using eBGP.
- C. Each leaf router advertises the prefixes of its own locally connected servers.
- D. Spine routers learn prefixes from leaf routers directly using eBGP.
