500-710 Trustworthy Dumps - Reliable 500-710 Exam Blueprint

There are only key points in our 500-710 Training Materials. From the experience of our former customers, you can finish practicing all the contents in our training materials within 20 to 30 hours, which is enough for you to pass the 500-710 exam as well as get the related certification. That is to say, you can pass the Cisco Video Infrastructure Implementation exam as well as getting the related certification only with the minimum of time and efforts under the guidance of our training materials. So what you are waiting for? Just come and buy them!

Individuals who hold the Cisco 500-710 Certification have a deep understanding of Cisco video infrastructure and the skills necessary to implement video infrastructure solutions in a variety of environments. They are able to deploy Cisco VCS and Expressway, Cisco Meeting Server, and VNOC services, and can configure call control, media services, and collaboration edge deployment. Individuals who hold this certification are highly valued in the IT industry and can seek a variety of positions, including video network engineer, collaboration engineer, and video conferencing engineer.

Cisco Video Infrastructure Implementation Sample Questions (Q11-Q16):

NEW QUESTION # 11

Where does an engineer look on the Conductor to view information about a call currently in progress?

- A. Status>Conferences>In Progress
- **B. Status>Calls>Calls**
- C. Status>Calls>In Progress
- D. Logs>Event Log

Answer: B

NEW QUESTION # 12

Which Cisco WebEx products can support calls from end points and WebEx clients?

- A. Cisco WebEx Training Center
- **B. Cisco WebEx Meeting Center**
- C. Cisco WebEx Support Center
- D. Cisco WebEx Event Center

Answer: B

Explanation:

Cisco WebEx Meeting Center is a cloud-based service that provides video conferencing, screen sharing, chat, and other collaboration features for online meetings. Cisco WebEx Meeting Center can support calls from end points and WebEx clients, as well as from other devices and applications. End points are devices that are registered to the Cisco WebEx cloud, such as Cisco IP Phones, Cisco video devices, and third-party devices that use SIP to connect to the WebEx Suite services. WebEx clients are applications that run on desktops, laptops, tablets, or smartphones, such as the WebEx app, the WebEx Meetings app, or the WebEx Teams app.

Users can join WebEx meetings from end points or WebEx clients, and they can also dial in or dial out to other numbers using the WebEx cloud. The other options are not valid Cisco WebEx products that can support calls from end points and WebEx clients. Cisco WebEx Training Center, Cisco WebEx Support Center, and Cisco WebEx Event Center are specialized services that provide additional features for specific use cases, such as online training, remote support, and large-scale events. However, they do not support calls from end points or WebEx clients, and they require users to join the meetings using the WebEx Meetings app or a web browser. NEW QUESTION # 13

Which two elements of authentication credentials are stored in the local database of the Expressway?
(Choose two.)

- A. user authority
- **B. password**
- **C. username**
- D. crypto hash key
- E. CA authority

Answer: B,C

Explanation:

Explanation/Reference:

NEW QUESTION # 14

Which two options are included in an endpoint registration request message that is sent to a SIP Server?
(Choose two.)

- A. E.164URI
- B. Endpoint IP address
- C. SIP Server IP address
- **D. SIP URI**
- **E. E.164 address**

Answer: D,E

Explanation:

An endpoint registration request message that is sent to a SIP Server contains the following two options1:

* E.164 address: This is the telephone number of the endpoint, which is used to identify the endpoint in the SIP domain. The E.164 address is also known as the Address of Record (AOR), which is a high-level name that is assigned to a SIP entity without regard to the device or devices that name might use.

The format for an AOR is sip:user@domain (e.g. 2025551234@sip.plivo.com)2.

* SIP URI: This is the location of the endpoint, which is identified by an IP address, port number and protocol. The SIP URI is used to reach the endpoint for establishing a media session. The format for a SIP URI is sip:user@host:port;transport (e.g. sip:2025551234@192.168.1.120:5060;udp)1.

The other options are not correct because:

* SIP Server IP address: This is not included in the endpoint registration request message, as the endpoint already knows the IP address of the SIP Server to which it is sending the message. The SIP Server IP address is usually configured in the endpoint settings as the Registration Domain or the Outbound Proxy3.

* Endpoint IP address: This is not included in the endpoint registration request message, as it is already part of the SIP URI. The endpoint IP address is the host part of the SIP URI, which indicates the location of the endpoint1.

* E.164URI: This is not a valid option, as there is no such thing as an E.164URI. The E.164 address is not a URI, but a telephone number that is used to identify the endpoint in the SIP domain2.

NEW QUESTION # 15

In an H.323 call that is not interworked, which three signaling protocols are routed through the Expressway? (Choose three.)

- A. Q.931
- B. RTP
- C. RAS
- D. RTCP
- E. H.254
- F. H.245

Answer: A,C,E

NEW QUESTION # 16
