## AD0-E716 New Dumps Files, Reliable AD0-E716 Braindumps Book

Nowadays, online learning is very popular among students. Most candidates have chosen our AD0-E716 learning engine to help them pass the exam. Our company has accumulated many experiences after ten years' development. We never stop researching and developing the new version of the AD0-E716 practice materials. With our AD0-E716 study questions, you can easily get your expected certification as well as a brighter future.

### Adobe Commerce Developer with Cloud Add-on Sample Questions (Q46-Q51):

#### NEW QUESTION # 46

An Adobe Commerce developer is working on a module to manage custom brand entities and wants to replicate the following SQL query using SearchCriteria:

```
$filter1->setField('featured')
->setValue(1)
->setConditionType('eq');

$filter2->setField('logo_image')
->setConditionType('notnull');

$filterGroup1->setFilters([$filter1, $filter2]);

$filter3->setField('enabled')
->setValue(1)
->setConditionType('eq');

$filterGroup2->setFilters([$filter3]);

$searchCriteria->setFilterGroups([$filterGroup1, $filterGroup2]);
```

- A.
- B.

```
$filter1->setField('enabled')
->setValue(1)
->setConditionType('eq');

$searchCriteria->setFilter($filter1);
$filter2->condition('featured =? OR logo_image ?', [1, 'IS NOT NULL'])
$searchCriteria->setSelectFields($filter2);
```

```
$filter1->setField('featured')
->setValue(1)
->setConditionType('eq');

$filter2->setField('logo_image')
->setConditionType('notnull');

$filter3->setField('enabled')
->setValue(1)
->setConditionType('eq');

$searchCriteria->setFilter($filter3)
->setOrFilter([$filter1, $filter2]);
```

- C.

Answer: C

Explanation:

The following SearchCriteria query will replicate the SQL query:

```
$searchCriteria = new \Magento\Framework\Api\SearchCriteriaBuilder();
```

```
$searchCriteria->addFilter('name', 'Brand 1', 'eq');
```

```
$searchCriteria->addFilter('status', 1, 'eq');
```

```
$brandCollection = $this->brandRepository->getList($searchCriteria);
```

### NEW QUESTION # 47

An Adobe Commerce developer is tasked to add a file field to a custom form in the administration panel, the field must accept only .PDF files with size less or equal than 2 MB. So far the developer has added the following code within the form component xml file, inside the fieldset node:

```
<field name="pdf_file" formElement="fileUploader">
    <formElements>
        <fileUploader>
            <settings>
                <uploaderConfig>
                    <param xsi:type="string" name="url">myvendor_mymodule/customForm/uploadPdf</param>
                </uploaderConfig>
            </settings>
        </fileUploader>
    </formElements>
</field>
```

How would the developer implement the validations?

A)

Add the Validations Within the HyVendor\MyModule\Controller\Adminhtml\CustomEntity\UploadPdf Controller

```
public function execute()
{
    $file = $this->fileUploaderFactory->create($this->getRequest()->getPdfFile());
    if($file->getExtension() != 'pdf') {
        throw new InvalidFileException(__('The file must be PDF.'));
    }
    if($file->getSize() >= '2048000') {
        throw new InvalidFileException(__('The file size must be less or equal than 2MB'));
    }
    return $this->resultFactory->create(ResultFactory::TYPE_PAGE);
}
```

B)

Add a virtual type for MyVendor\MyModule\Model\CustomPdfuploader specifying the allowedExtensions and the maxFileSize for the constructor, within the module's di.xml:

```
<type name="MyVendor\MyModule\Model\CustomPdfuploader">
    <arguments>
        <argument name="allowedExtensions" xsi:type="string">pdf</argument>
        <argument name="maxFileSize" xsi:type="number">2048000</argument>
    </arguments>
</type>
```

C)

Add the following code inside the <settings> node:

```
<allowedExtensions>pdf</allowedExtensions>
<maxFileSize>2048000</maxFileSize>
```

- A. Option A
- B. Option B
- C. Option C

**Answer: C**

Explanation:

To add file upload validation for a custom form field in the Adobe Commerce admin panel, which should restrict the file type to .pdf and limit the file size to 2 MB, the recommended approach is to include the validation parameters directly within the <settings> node in the form's XML configuration. This ensures that the validation occurs on the client-side as well as server-side, providing immediate feedback to users before submission.

Option C is correct for the following reasons:

\* Adding Validation Inside <settings>: By placing the <allowedExtensions> and <maxFileSize> tags within the <settings> node of the XML configuration, the system will enforce these restrictions directly within the form component. This method leverages Magento's built-in support for validation settings, which ensures that only files matching the specified criteria (.pdf files of 2 MB or smaller) are

accepted by the form.

\* Explanation: Magento UI components allow for client-side validation through the <settings> node, where attributes such as allowedExtensions and maxFileSize are used to control file upload constraints. This approach not only validates the file size and type but also integrates seamlessly with Magento's front-end validation mechanisms.

\* References: Magento's documentation on UI components highlights how to enforce file type and size restrictions through XML configurations within <settings>, making it the standard and most efficient solution for this task.

\* Alternatives and Limitations:

\* Option A: Adding validation within the controller (UploadPdf) can provide additional server-side validation, but this does not prevent the user from selecting invalid files in the first place.

Server-side validation alone lacks the user experience enhancement provided by client-side feedback.

\* Option B: Configuring a virtual type in di.xml for validation (e.g., setting allowedExtensions and maxFileSize within a custom uploader model) is effective for backend processing but is not as straightforward for direct form validation within the admin UI. It complicates the implementation by requiring custom backend logic where native XML validation can suffice.

Option C provides a straightforward, maintainable, and user-friendly way to implement file validation directly in the form configuration. It reduces the need for custom controller or model logic and leverages Magento's built-in form handling capabilities.

### NEW QUESTION # 48

ECE-Tools provides a set of tools that can be used to manage and maintain your Adobe Commerce Cloud environment. What are some of the features provided by ECE-Tools?

- A. Builds application, Applies custom patches and Dump configuration for static content deployment.
- B. Fastly configuration, Applies custom patches and Dump configuration for static content deployment.
- C. Builds application, Applies custom patches, and Shows the list of S3 backup tar.gz files.

**Answer: A**

Explanation:

Some of the features provided by ECE-Tools are building application, applying custom patches, and dumping configuration for static content deployment. ECE-Tools is a set of scripts and tools designed to manage and deploy Adobe Commerce Cloud projects. It provides commands for building application code, applying patches for Magento core issues or custom modules, and dumping configuration settings for static content deployment optimization. Verified Reference: [Magento 2.4 DevDocs] 2

### NEW QUESTION # 49

How would a developer turn on outgoing emails on an Adobe Commerce Cloud Staging environment?

- A. From the command line  
ece-tools enable\_smtp true
- B. Access the Project Web Interface and select the Staging environment.  
Select Configure environment.
- C. From the command line  
magento-cloud environment:info -p <project-id> -e <environment-id> enable\_smtp true

**Answer: B**

Explanation:

Toggle Outgoing emails On

Explanation:

The developer can turn on outgoing emails on an Adobe Commerce Cloud Staging environment by accessing the Project Web Interface and selecting the Staging environment. Then, the developer can select Configure environment and toggle Outgoing emails On. This will enable the SMTP service for the Staging environment and allow emails to be sent from the application. Verified Reference: [Magento 2.4 DevDocs] 1

### NEW QUESTION # 50

There is an integration developed using a cron service that runs twice a day, sending the Order ID to the integrated ERP system if there are orders that are able to create an invoice. The order is already loaded with the following code:

```
$order = $this->orderRepository->get($orderId);
```

In order to verify if the store has invoices to be created, what implementation would the Adobe Commerce developer use?

- A. 

```
if ($order->canInvoice()) {  
    // send integration to the ERP  
}
```
- B. 

```
if (!$order->isPaymentReview()) {  
    // send integration to the ERP  
}
```
- C. 

```
if ($order->hasInvoice()) {  
    // send integration to the ERP  
}
```

**Answer: C**

Explanation:

The developer can use the canInvoice method of the order object to check if the order can be invoiced or not. This method returns true if the order has a state of new, processing, or payment review and has not been fully invoiced yet. The developer can use this method in a conditional statement to send the order ID to the ERP system only if the order can be invoiced. Verified Reference: [Magento 2.4 DevDocs] [Magento Stack Exchange]

## NEW QUESTION # 51

.....

If you fail in AD0-E716 exam test with Actual4test AD0-E716 exam dumps, we promise to give you full refund! You only need to scan your AD0-E716 test score report to us together with your receipt ID. After our confirmation, we will give you full refund in time. Or you can choose to charge another exam Q&AS instead of AD0-E716 Exam Dumps. Useful Adobe certifications exam dumps are assured with us. If our AD0-E716 exam dumps can't help you pass AD0-E716 exam, details will be sent before we send the exam to you. We don't waste our customers' time and money! Trusting Actual4test is your best choice!
