

# Valid Analytics-DA-201 Exam Testking, Analytics-DA-201 Trustworthy Dumps

Some candidates may purchase our Analytics-DA-201 software test simulator for their companies. They will ask us how many personal computers our soft version can be install. In fact we have no limit for computer quantity. So if you purchase our Analytics-DA-201 software test simulator, it supports multi-users at the same time. It can be installed on computers without any limits. If you are a training school, it is suitable for your teachers to present and explain casually. Good Analytics-DA-201 software test simulator have high passing rate and ExamcollectionPass are looking forward to your long-term cooperation.

## Salesforce Analytics-DA-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>ABAP RESTful Application Programming Model: This section of the exam evaluates the capabilities of the SAP S</li> <li>4HANA Technical Consultant in using the ABAP RESTful Application Programming Model (RAP). It focuses on understanding the structure and components of RAP, including behavior definitions, service bindings, and metadata extension. The goal is to validate the ability to develop modern and scalable applications using RAP.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Core ABAP Programming: This part of the exam assesses the foundational programming skills of the SAP S</li> <li>4HANA Technical Consultant. It includes knowledge of syntax, control structures, modularization, and internal tables in ABAP. The section aims to validate the candidate's proficiency in writing clean, efficient ABAP code using best practices.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>ABAP SQL and Code Pushdown: This section of the exam measures the competencies of the SAP ABAP Cloud Developer related to performance optimization through ABAP SQL and code pushdown techniques. It ensures that the developer understands how to shift logic to the database layer using efficient SQL scripting to enhance performance in data-intensive applications.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Object-Oriented Design: This section of the exam evaluates the SAP ABAP Cloud Developer's understanding of object-oriented principles in the ABAP context. It focuses on class-based programming, inheritance, interfaces, and polymorphism, all crucial for building modular and maintainable ABAP cloud applications.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>SAP Clean Core Extensibility and ABAP Cloud: This part of the exam targets the SAP S</li> <li>4HANA Technical Consultant and covers concepts of clean core extensibility using ABAP in the cloud. The focus is on in-app and side-by-side extensibility techniques, ensuring that custom code complies with cloud-readiness principles and does not compromise the upgrade stability of core systems.</li> </ul>

**Analytics-DA-201 Trustworthy Dumps | Analytics-DA-201 Real Exam Questions**

As is known to all, Analytics-DA-201 practice test simulation plays an important part in the success of exams. By simulation, you can get the hang of the situation of the real exam with the help of our free demo of Analytics-DA-201 exam questions. Just as an old saying goes, knowing the enemy and yourself, you can fight a hundred battles with no danger of defeat. Simulation of our Analytics-DA-201 Training Materials make it possible to have a clear understanding of what your strong points and weak points are and at the same time, you can learn comprehensively about the Analytics-DA-201 exam and pass it easily.

## Salesforce Certified Tableau Data Analyst Sample Questions (Q102-Q107):

### NEW QUESTION # 102

A Data Analyst has the following bar chart.

The analyst wants the chart to appear as shown in the following exhibit.

What should the analyst add?

- A. A distribution band
- B. A reference line
- C. A reference band
- D. An average line

Answer: A

### NEW QUESTION # 103

A Data Analyst has the following dataset in Microsoft Excel.

	A	B	C	D	E
1	Team B				
2	Brussels1, 5/5/2021				
3	Product ID		QA Score	Date	Price
4			If Known		
5	1324	Household	99	2021-05-03	\$ 11.00
6	4070	Garden	74	2020-04-01	\$ 12.99
7	788	Garden	66	2019-03-01	\$ 32.99
8	741	Household	71	2019-03-01	\$ 42.59
9	5433	Garden	78	2021-05-03	\$ 78.99
10	67	Garden	54	2019-03-01	\$ 109.99
11	5656	Garden	30	2019-03-01	\$ 123.78
12	1324	Garden	97	2021-05-03	\$ 23.99
13				2021-05-03	\$ 78.99
14	4070	Garden	71	2019-03-01	\$ 56.99
15	788	Garden	74	2021-05-03	\$ 23.89
16	741	Household	74	2019-03-01	\$ 22.99
17	5433	Garden	69	2019-03-01	\$ 109.00
18	A67	Garden	43	2019-03-01	\$ 34.00
19	5656	Garden	40	2019-01-31	\$ 23.00
20	This team worked out of London until moving to Brussels in 4/2021				
21					

The analyst is using Data Interpreter to cleanse the dataset. Data Interpreter provides the following results.

	A	B	C	D	E	F
1	Team B					
2	Brussels1, 5/5/2021					
3	Product ID		QA Score	Date	Price	Header
4			If Known			Header
5	1324	Household	99	2021-05-03	\$11.00	Data

How many rows of data will be ingested into Tableau as values?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: A**

#### NEW QUESTION # 104

You have the following dashboard that contains two visualizations.

You want to show only one visualization at time. Users must be able to switch between visualizations. What should you use?

- A. Show/hide buttons
- B. A parameter and a calculated field
- C. Worksheet actions
- D. Dashboard actions

**Answer: A**

Explanation:

In Tableau, you can manage the visibility of different visualizations on a dashboard using various techniques.

Among the options provided, the most straightforward method to allow users to switch between two visualizations is to use show/hide buttons.

Here's why each option is or isn't suitable for the requirement:

A). A parameter and a calculated field: While it's possible to use a parameter and a calculated field to control which visualization is displayed, it requires creating a calculated field that responds to a parameter and then using that field to filter the view. This method can become complex and is not as user-friendly for simply showing and hiding visualizations.

B). Worksheet actions: Worksheet actions in Tableau typically allow users to interact with the data within a visualization, such as filtering data or highlighting related data points when clicking or hovering. They are not designed to control the visibility of entire visualizations on a dashboard.

C). Show/hide buttons: Show/hide buttons are a feature specifically designed to manage the visibility of dashboard elements. When you create a show/hide button, it can be configured to display or hide a particular visualization, container, or any other dashboard element when clicked. This provides a very intuitive interface for users to switch between visualizations.

D). Dashboard actions: Dashboard actions, like worksheet actions, are used to create interactions between sheets, such as filtering data or navigating to other sheets or URLs based on user interactions. They are not intended for toggling the visibility of visualizations.

Therefore, the correct answer is C. Show/hide buttons as they provide a user-friendly way to switch between visualizations on a dashboard without the need for complex calculations or actions that aren't meant for this purpose. The show/hide button feature is specifically designed for toggling visibility and offers a simple and effective solution for the requirement.

### NEW QUESTION # 105

You have the following dataset.

Customer Name	Sales	Rank
Adrian Barton	10,000	3
Raymond Buch	12,000	2
Sean Miller	12,000	2
Tamara Chand	18,000	1

You need to calculate the ranking shown in the Rank field.

How should you complete the formula? (Use the dropdowns in the Answer Area to select the correct options to complete the

formula ?

**Answer:**

Explanation:

Answer Area

Explanation:

To calculate the ranking shown in the Rank field, you need to use the RANK\_UNIQUE function, which returns the unique rank of each value in a partition. You need to specify the expression as SUM([Sales]), which calculates the total sales for each product. You also need to specify the order as descending, which means that the highest sales will have the lowest rank. Finally, you need to specify the restart as every

[Category], which means that the ranking will reset for each category. References: [https://help.tableau.com/current/pro/desktop/en-us/functions\\_functions\\_tablecalculation.htm](https://help.tableau.com/current/pro/desktop/en-us/functions_functions_tablecalculation.htm) [https://help.tableau.com/current/pro/desktop/en-us/calculations\\_calculatedfields\\_lod\\_rank.htm](https://help.tableau.com/current/pro/desktop/en-us/calculations_calculatedfields_lod_rank.htm)

#### NEW QUESTION # 106

You have a data source that contains data for every city in the United States. The following is a sample of the data.

You need to use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million. Which type of filter should you use?

- A. Top filter
- B. General filter
- C. Wildcard filter
- **D. Condition filter**

**Answer: D**

Explanation:

To use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million, you should use a condition filter. A condition filter is a type of filter that shows only the values that meet a specified condition based on a measure or a calculation. You can create a condition filter by dragging a dimension to the Filters shelf and selecting Condition from the dialog box. Then you can enter a formula or choose an option that defines your condition.

In this case, you want to create a condition filter based on Population, which is a measure. You can drag City to the Filters shelf and select Condition from the dialog box. Then you can choose By field from the tab and select Population > Sum > Greater than > 1000000 from the drop-down lists. This will create a condition filter that shows only the cities that have a sum of population greater than one million.

The other options are not correct for this scenario. A general filter is not a specific type of filter, but a term that refers to any type of filter in Tableau. A wildcard filter is a type of filter that shows only the values that match a specified pattern or string, such as "New\*" or "\*ton". A top filter is a type of filter that shows only the top or bottom N values of a measure or dimension based on a ranking or an aggregation. References:
