NEW QUESTION # 553

In order to dissipate heat, a records safe must contain insulation and:

- A. carbon.
- **B. moisture.**
- C. laminated steel.
- D. vacuum.

Answer: B

Explanation:

A records safe is designed to protect paper records from heat damage during a fire. The critical element in achieving this protection is the dissipation of heat through insulation materials. Moisture is incorporated into the insulation because it serves as a heat-absorbing medium. As the safe's interior temperature rises, the moisture in the insulation turns to steam, which absorbs significant amounts of heat, helping to maintain the interior temperature below the combustion point of paper (approximately 451°F or 233°C).

* Insulation with Moisture:

* Insulation materials in the safe are impregnated with moisture.

* The moisture delays heat transfer by absorbing and utilizing the energy for phase change (water to steam).

* Controlled Internal Environment:

* The steam generated prevents direct exposure of the contents to high temperatures, preserving paper documents.

* Fire Resistance Standards:

* Safes are tested and rated based on their ability to keep the internal temperature below critical levels for a specified duration (e.g., UL 72 Fire Resistance Ratings).

* B: Laminated steel adds structural strength but does not contribute to heat dissipation.

* C: A vacuum would not dissipate heat effectively; it could lead to structural failure due to fire conditions.

* D: Carbon is not relevant in dissipating heat in safes.

Key Design Features of a Records Safe: Why Other Options Are Incorrect: ASIS CPP References:

* Domain 5: Physical Security Discusses the design and testing of fire-resistant safes and protective storage systems.

NEW QUESTION # 555

An organization's Chief Executive Officer (CEO) wants to expand surveillance technology at their main distribution center as part of an employee theft and misconduct reduction initiative. Which of the following should the security management team advise the CEO of regarding privacy considerations?

- A. The additional cameras should be hidden so that employees do not know that they are under surveillance.
- **B. Consult with HR and legal to ensure no cameras are recording in areas where employees have a reasonable expectation of privacy.**
- C. The CEO should invest in other types of technology to deter crime and misconduct due to privacy considerations
- D. The new surveillance system should utilize IP cameras that are capable of recording audio as well as video.

Answer: B

Explanation:

When implementing surveillance technology, especially in workplace settings, organizations must carefully balance security needs with employee privacy rights to avoid legal and ethical violations. Surveillance must adhere to the principle of reasonable expectation of privacy under labor laws and constitutional frameworks.

* Reasonable Expectation of Privacy:

* Employees have a reasonable expectation of privacy in specific areas such as restrooms, locker rooms, and designated break rooms.

* Surveillance in these areas can result in legal action, regulatory penalties, or damage to employee trust.

* Legal Consultation:

* The security team must consult with legal counsel to ensure the surveillance policy complies with applicable laws (e.g., GDPR, CCPA, or labor laws).

* Laws may also mandate notification and consent from employees regarding monitoring practices.

* Coordination with HR:

* HR can assist in developing policies that clarify where and how surveillance will occur, ensuring transparency.

* Training and communication with employees about the surveillance purpose (reducing theft and misconduct) help mitigate concerns.

* Transparency:

* Cameras should not be hidden; clear signage indicating the presence of surveillance ensures employees are aware and serves as a deterrent.

* Transparent policies protect the organization from claims of covert surveillance.

* A: Hidden cameras create distrust among employees and may lead to legal challenges.

* B: While other technologies may supplement security, surveillance is a valid and widely accepted measure for theft prevention.

* C: Audio recording introduces additional privacy concerns and legal complexities, as recording conversations without consent is often restricted.

Key Considerations: Why Other Options Are Incorrect: ASIS CPP References:

* Domain 2: Risk Management Discusses the importance of privacy and legal compliance in implementing security measures.

* Domain 5: Physical Security Covers the effective and lawful deployment of surveillance technologies.

* Domain 8: Legal Aspects Highlights considerations for balancing security initiatives with employee rights and privacy laws.
