Exam Associate-Google-Workspace-Administrator Success & Associate-Google-Workspace-Administrator Practice Exam Fee

The Google Associate-Google-Workspace-Administrator certification verifies that you have a basic understanding of Associate Google Workspace Administrator concepts and virtualization. Success in the Associate-Google-Workspace-Administrator exam of the Google Associate-Google-Workspace-Administrator certificate also proves your knowledge of basic troubleshooting concepts and data center technology. When you earn the Associate-Google-Workspace-Administrator Certification you will get reliable exam guide materials.

Google Associate Google Workspace Administrator Sample Questions (Q65-Q70):

NEW QUESTION # 65

Your company handles sensitive client data and needs to maintain a high level of security to comply with strict industry regulations. You need to allow your company's security team to investigate potential security breaches by using the security investigation tool in the Google Admin console.

What should you do?

- A. Assign the User Management Admin role to the security team
- B. Create an activity rule that triggers email notifications to the security team whenever a high-risk security event occurs.
- C. Create an administrator role with Security Center access. Assign the role to the security team

- D. Assign the super admin role to the security team

Answer: C

Explanation:

To allow the security team to investigate potential security breaches using the security investigation tool, you should create a custom administrator role with Security Center access. This role will provide the security team with the necessary permissions to access and use the security investigation tool without granting them unnecessary permissions, such as those associated with User Management or Super Admin roles. This approach ensures both security and compliance with industry regulations.

NEW QUESTION # 66

You are applying device and user policies for employees in your organization who are in different departments. You need each department to have a different set of policies. You want to follow Google-recommended practices. What should you do?

- **A. Create a child organizational unit for each department.**
- B. Create separate top-level organizational units for each department.
- C. Create an Access group for each department. Configure the applicable policies.
- D. Add all managed users and devices in the top-level organizational unit.

Answer: A

Explanation:

Google recommends using the organizational unit (OU) structure for applying different settings and policies to different groups of users and devices within your Google Workspace domain. To apply a unique set of policies to each department, you should create a child organizational unit for each department under your main domain structure.

Here's why option D aligns with Google's best practices and why the others are less suitable:

D . Create a child organizational unit for each department.

Organizational units provide a hierarchical structure for managing users and devices. By creating a child OU for each department, you can then apply specific device and user policies to that OU. Users and devices within a child OU inherit policies from parent OUs but can also have OU-specific policies that override or supplement the inherited ones. This allows for granular control and ensures that each department can have the policies tailored to its needs. This is the recommended method by Google for managing policies based on departments or other logical groupings within an organization.

Associate Google Workspace Administrator topics guides or documents reference: The official Google Workspace Admin Help documentation on "How the organizational structure works" and "Apply settings for specific groups of users or devices" (or similar titles) clearly explains the purpose and benefits of using OUs for policy management. It emphasizes the hierarchical nature and how policies are applied and inherited through the OU structure. Creating child OUs for departments is a direct application of this recommended practice.

A . Create separate top-level organizational units for each department.

Creating separate top-level OUs for each department is generally not recommended for managing policies within the same organization. Top-level OUs are meant to represent distinct functional or administrative units that might have their own domain settings and administrators. Managing all departments under a single domain but in separate top-level OUs can complicate overall administration, sharing, and user management across the organization. Child OUs within a single domain provide the necessary separation for policy application while maintaining a unified organizational structure.

Associate Google Workspace Administrator topics guides or documents reference: Google's documentation on organizational structure usually advises on creating a logical hierarchy of child OUs under a single top-level OU representing the organization. Separating departments into top-level OUs is not a standard or recommended practice for policy management within a single domain.

B . Create an Access group for each department. Configure the applicable policies.

Access groups are primarily used for controlling access to specific resources or services. While you can manage group membership based on departments, policies for users and devices are typically applied at the organizational unit level, not directly to access groups. While some settings might be influenced by group membership, OUs are the primary mechanism for policy enforcement. Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help distinguishes between organizational units and groups (including access groups). Policies are consistently described as being applied to OUs. Groups are for managing access and collaboration.

C . Add all managed users and devices in the top-level organizational unit.

Applying all policies at the top-level OU would mean that all users and devices inherit the same set of policies. This contradicts the requirement of having different policies for each department. To achieve department-specific policies, you need to organize users and devices into separate OUs.

Associate Google Workspace Administrator topics guides or documents reference: Google's documentation emphasizes the flexibility of the OU structure to apply different policies to different subsets of users and devices. Placing everyone in the top-level

OU negates this flexibility.

Therefore, the Google-recommended practice for applying different device and user policies to employees in different departments is to create a child organizational unit for each department. This allows for targeted policy application and management within the overall organizational structure.

NEW QUESTION # 67

The current data storage limit for the sales organizational unit (OU) at your company is set at 10GB per user. A subset of sales representatives in that OU need 100GB of storage across shared services. You need to increase the storage for only the subset of sales representatives by using the least disruptive approach and the fewest configuration steps. What should you do?

- A. Create a configuration group, and add the subset of users to that group. Set the group storage limit to 100GB.
- B. Instruct the subset of users to store their documents in a Shared Drive with a 100GB limit.
- C. Change the storage limit of the sales OU to 100GB.
- **D. Move the subset of users to a sub-OU, and assign a 100GB storage limit to that sub-OU.**

Answer: D

Explanation:

By moving the subset of sales representatives to a sub-organizational unit (OU) and assigning a 100GB storage limit to that sub-OU, you can efficiently increase the storage for those users without affecting the rest of the sales team. This approach allows you to target the specific users that require more storage, maintaining minimal disruption and configuration steps.

NEW QUESTION # 68

Your organization is increasingly concerned about its environmental impact. You want to assess the environmental impact of using Google Workspace services. Which report should you use?

- A. Apps Monthly Uptime report
- B. Accounts report
- C. Google Environmental Report
- **D. Carbon footprint report**

Answer: D

Explanation:

To assess the environmental impact of using Google Workspace services, you should refer to the Google Environmental Report. Google publishes comprehensive reports detailing its environmental efforts, including the energy efficiency of its data centers, its use of renewable energy, and its overall carbon footprint, which includes the impact of services like Google Workspace. Here's why option B is the correct choice and why the others are not relevant to assessing the overall environmental impact of using Google Workspace:

B . Google Environmental Report

Google regularly publishes detailed environmental reports that cover various aspects of its sustainability initiatives, including its progress towards using renewable energy, its efforts to improve energy efficiency in its operations (which power Google Workspace), and its overall carbon footprint. These reports provide insights into the environmental impact associated with using Google services.

Associate Google Workspace Administrator topics guides or documents reference: While there might not be a specific "Google Workspace Environmental Impact Report" as a standalone document within the Admin console, Google's overarching "Environmental Report" (often found on Google's sustainability or environmental responsibility websites) encompasses the infrastructure and practices that support all Google services, including Google Workspace. Administrators looking for this information would be directed to these publicly available Google reports.

A . Carbon footprint report

While the concept of a "carbon footprint report" is relevant to environmental impact, Google typically includes this information within its broader "Environmental Report" rather than providing a separate report specifically for Google Workspace usage within an organization's Admin console. You would likely find data related to the carbon efficiency of Google's infrastructure in their main environmental disclosures.

Associate Google Workspace Administrator topics guides or documents reference: Google's communication about its carbon footprint and environmental efforts is usually consolidated in their public sustainability reports.

C . Apps Monthly Uptime report

The Apps Monthly Uptime report provides information about the reliability and availability of Google Workspace services. It focuses on service performance and uptime metrics, not on environmental impact or sustainability.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation on service-level agreements (SLAs) and service status provides information about uptime guarantees and how to monitor service availability, which is the focus of the Apps Monthly Uptime report.

D . Accounts report

The Accounts report in the Google Admin console provides details about user accounts within your organization, such as the number of active users, account status, and other user-related information. It does not contain any data or analysis related to the environmental impact of using Google Workspace services.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation on reporting and user accounts describes the information available in the Accounts report, which is focused on user management and activity metrics.

Therefore, to assess the environmental impact of using Google Workspace services, your organization should refer to the publicly available Google Environmental Report, which details Google's sustainability efforts and overall environmental performance.

NEW QUESTION # 69

Your company has just started using Search Ads 360. You need to limit access to Additional Google services for your entire organization by using the Admin console. Only the marketing team and a specific group of users from the web design team should have access. What should you do?

- A. Enable Search Ads 360 for the marketing organizational unit (OU). Create a new group in the Admin console that includes the web design team users who need access. Enable Search Ads 360 for that group.
- B. Enable Search Ads 360 for the marketing organizational unit (OU). Create a sub-OU under the marketing OU. and move the web design team users who need access into this sub-OU.
- **C. Enable Search Ads 360 for the marketing organizational unit (OU). Create a new group in the Admin console that includes the web design team users who need access. Enable Search Ads 360 for that group.**
- D. Enable Search Ads 360 at the top level of your organizational structure.
- E. Enable Search Ads 360 for both the marketing and web design team organizational units (OUs). Create a group to explicitly deny access to Search Ads 360. Assign the group to the web design users who should not have access.

Answer: C

Explanation:

This approach leverages both organizational units and groups for access control. By enabling Search Ads 360 for the marketing OU, you grant access to all users within that department. Then, by creating a separate group containing the specific web design users who require access and enabling Search Ads 360 for that group, you provide them with the necessary permissions without granting access to the entire web design OU. This method allows for targeted access based on both departmental affiliation and specific user needs, aligning with the principle of least privilege.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation on "Turn services on or off for users" explains how to control access to Google services at both the organizational unit and group levels. It highlights the flexibility of using a combination of OUs and groups to achieve granular access control. Enabling a service for an OU applies it to all members of that OU, while enabling it for a group applies it only to the members of that specific group, regardless of their OU.

A . Enable Search Ads 360 for both the marketing and web design team organizational units (OUs). Create a group to explicitly deny access to Search Ads 360. Assign the group to the web design users who should not have access.

While you can deny service access using groups, it's generally more straightforward and less prone to errors to explicitly grant access only to those who need it. Enabling the service for the entire web design OU and then trying to revoke access for some users within it adds unnecessary complexity and potential for misconfiguration. Deny rules can also sometimes interact in unexpected ways with allow rules.

Associate Google Workspace Administrator topics guides or documents reference: While the Admin console allows for denying service access through groups, the documentation often emphasizes granting access to specific OUs or groups that require it as a more manageable and transparent approach.

B . Enable Search Ads 360 at the top level of your organizational structure.

Enabling Search Ads 360 at the top level would grant access to the service to every user in your organization. This directly contradicts the requirement to limit access to only the marketing team and a specific group within the web design team. This option provides the least control and violates the principle of least privilege.

Associate Google Workspace Administrator topics guides or documents reference: Google's best practices for service control emphasize granting access only to those who need it, typically by applying settings at the OU or group level, not organization-wide unless the service is intended for everyone.

C . Enable Search Ads 360 for the marketing organizational unit (OU). Create a sub-OU under the marketing OU. and move the web design team users who need access into this sub-OU.

Creating a sub-OU under the marketing OU for users from the web design team who need access is a less logical organizational

structure. It mixes users from different departments within the same branch of the OU hierarchy, which can complicate future policy management and reporting. It's generally better to keep users within their respective departmental OUs and use groups for cross-departmental service access.

Associate Google Workspace Administrator topics guides or documents reference: Google's guidance on OU structure recommends organizing users based on their functional role or department within the organization for logical policy management and reporting. Creating sub-OUs based on service access needs rather than organizational structure is not a typical recommendation. Therefore, the most appropriate and manageable solution is to enable Search Ads 360 for the marketing OU and create a separate group containing the specific web design users who need access, then enable the service for that group as well.

Explanation:

To limit access to Search Ads 360 to only the marketing team and a specific group of users from the web design team, the most effective and Google-recommended approach is to enable the service for the marketing organizational unit (OU) and then create a separate group containing the specific web design users who need access, enabling the service for that group as well. This allows for granular control and avoids granting access to the entire web design OU.

Here's why option D is the correct solution and why the others are less ideal:

NEW QUESTION # 70

.....

The pass rate is 98.75% for Associate-Google-Workspace-Administrator study materials, and if you choose us, we can ensure you pass the exam successfully. In addition, Associate-Google-Workspace-Administrator exam dumps of us are edited by professional experts, they are quite familiar with the exam center, therefore Associate-Google-Workspace-Administrator study materials cover most of knowledge points. We also pass guarantee and money back guarantee if you fail to pass the exam. We will refund your money to your payment account. Online service stuff for Associate-Google-Workspace-Administrator Exam Braindumps is available, and if you have any questions, you can have a chat with us.

Exam Associate-Google-Workspace-Administrator Success: <https://www.braindumpquiz.com/Associate-Google-Workspace-Administrator-exam-material.html>

For instance, the self-learning and self-evaluation functions can help the clients check their results of learning the Associate-Google-Workspace-Administrator study materials, Google Valid Associate-Google-Workspace-Administrator Test Sims So, trust us and join us, After you passed Exam Associate-Google-Workspace-Administrator Success - Associate Google Workspace Administrator we will give exam voucher for another exam dumps discount if you want, Google Valid Associate-Google-Workspace-Administrator Test Sims Valid study method or a shortcut will be your way out of this situation.

A gargantuan share of U.S, It concatenates its Associate-Google-Workspace-Administrator Test Topics Pdf arguments into a single string and evaluates the string as an arithmetic expression, For instance, the self-learning and self-evaluation functions can help the clients check their results of learning the Associate-Google-Workspace-Administrator Study Materials.

Pass Guaranteed 2025 Google - Associate-Google-Workspace-Administrator - Valid Associate Google Workspace Administrator Test Sims

So, trust us and join us, After you passed Associate Google Workspace Administrator we will give Associate-Google-Workspace-Administrator exam voucher for another exam dumps discount if you want, Valid study method or a shortcut will be your way out of this situation.

It allows students to find time-saving Exam Associate-Google-Workspace-Administrator Success and efficient learning methods while memorizing knowledge points.
