Amazon AWS-DevOps Practice Test - The Secret To Overcome Exam Anxiety

The AWS-DevOps exam requires the candidates to have thorough understanding on the syllabus contents as well as practical exposure of various concepts of certification. Obviously such a syllabus demands comprehensive studies and experience. If you are lack of these skills, you should find our AWS-DevOps study questions to help you equip yourself well. As long as you study with our AWS-DevOps practice engine, you will find they can help you get the best percentage on your way to success.

Amazon DOP-C01 certification exam consists of multiple-choice and multiple-response questions, and candidates have 180 minutes

to complete the exam. The passing score for the exam is 750 out of 1000, and the exam fee is \$300 USD. Candidates can take the exam in-person at a testing center or online through a remote proctoring service.

Amazon AWS Certified DevOps Engineer - Professional Sample Questions (Q166-Q171):

NEW QUESTION # 166

Which of the following will you need to consider so you can set up a solution that incorporates single sign-on from your corporate AD or LDAP directory and restricts access for each user to a designated user folder in a bucket? Choose 3 Answers from the options below

- A. Setting up a federation proxy or identity provider
- B. Tagging each folder in the bucket
- C. Using AWS Security Token Service to generate temporary tokens
- D. Setting up a matching IAM user for every user in your corporate directory that needs access to a folder in the bucket
- E. Configuring IAM role

Answer: A,C,E

Explanation:

Explanation

The below diagram showcases how authentication is carried out when having an identity broker. This is an example of a SAML connection, but the same concept holds true for getting access to an AWS resource.

For more information on federated access, please visit the below link:

* http://docs.aws.amazon.com/IAM/latest/UserGuide/id_roles_common-scenarios_federated-users.html

* https://docs.aws.amazon.com/IAM/latest/UserGuide/id_roles_create_for-idp_saml.html?icmpid=docs_iam_console

* <https://aws.amazon.com/blogs/security/writing-iam-policies-grant-access-to-user-specific-folders-in-an-amazon-s3-bucket/>

NEW QUESTION # 167

Which of the following is the default deployment mechanism used by Elastic Beanstalk when the application is created via Console or EBCLI?

- A. Rolling Deployments
- B. Immutable
- C. All at Once
- D. Rolling with additional batch

Answer: A

Explanation:

Explanation

The AWS documentation mentions

AWS Elastic Beanstalk provides several options for how deployments are processed, including deployment policies (All at once, Rolling, Rolling with additional batch,

and Immutable) and options that let you configure batch size and health check behavior during deployments.

By default, your environment uses rolling deployments

if you created it with the console or EB CLI, or all at once deployments if you created it with a different client (API, SDK or AWS CLI).

For more information on Elastic Beanstalk deployments, please refer to the below link:

* <http://docs.aws.amazon.com/elasticbeanstalk/latest/dg/using-features.rolling-version-deploy.html>

NEW QUESTION # 168

You run a small online consignment marketplace. Interested sellers complete an online application in order to allow them to sell their products on your website.

Once approved, they can post their product using a custom interface.

From that point, you manage the shopping cart process so that when a buyer decides to buy a product, you handle the billing and coordinate the shipping.

Part of this process requires sending emails to the buyer and the seller at different stages.

Your system has been running on AWS for a few months.

Occasionally, products are shipped before payment cleared and emails are sent out of order.

Furthermore, sometimes credit cards are being charged twice. How can you resolve these problems?

- A. Use the Simple Email Service (SES) to control the correct order of email delivery.
- B. Use the Amazon Simple Queue Service (SQS), and use a single set of workers for each task.
- C. Use the AWS Data Pipeline service to control the process flow of the various tasks.
- D. Use the Amazon Simple Queue Service (SQS), and use a different set of workers for each task.
- E. Use the Amazon Simple Workflow Service (SWF), and use a different set of workers for each task.

Answer: E

NEW QUESTION # 169

A DevOps Engineer has several legacy applications that all generate different log formats. The Engineer must standardize the formats before writing them to Amazon S3 for querying and analysis.

How can this requirement be met at the LOWEST cost?

- A. Have the application send its logs to an Amazon EMR cluster and normalize the logs before sending them to Amazon S3
- B. Have the application send its logs to Amazon QuickSight then use the Amazon QuickSight SPICE engine to normalize the logs Do the analysis directly from Amazon QuickSight.
- C. Use Amazon Kinesis Agent on each server to upload the logs and have Amazon Kinesis Data Firehose use an AWS Lambda function to normalize the logs before writing them to Amazon S3
- D. Keep the logs in Amazon S3 and use Amazon Redshift Spectrum to normalize the logs in place

Answer: C

NEW QUESTION # 170

A company is deploying a new application that uses Amazon EC2 instances.

The company needs a solution to query application logs and AWS account API activity.

Which solution will meet these requirements?

- A. Use the Amazon CloudWatch agent to send logs from the EC2 instances to Amazon S3.
Use AWS CloudTrail to deliver the API logs to Amazon S3 Use Amazon Athena to query both sets of logs in Amazon S3.
- B. Use the Amazon CloudWatch agent to send logs from the EC2 instances to Amazon Kinesis.
Configure AWS CloudTrail to deliver the API logs to Kinesis Use Kinesis to load the data into Amazon Redshift.
Use Amazon Redshift to query both sets of logs
- C. Use the Amazon CloudWatch agent to send logs from the EC2 instances to Amazon CloudWatch Logs.
Configure AWS CloudTrail to deliver the API logs to Amazon S3.
Use CloudWatch to query both sets of logs.

- D. Use the Amazon CloudWatch agent to send logs from the EC2 instances to Amazon CloudWatch Logs. Configure AWS CloudTrail to deliver the API logs to CloudWatch Logs. Use CloudWatch Logs Insights to query both sets of logs.

Answer: C
