We are dedicated to providing our clients with the most current and accurate Designing and Implementing Microsoft Azure Networking Solutions study material. That is why we provide 1 year of free AZ-700 questions updates if the Microsoft certification test content changes after your purchase. With this option, our clients can confidently use the most up-to-date and dependable AZ-700 preparatory material.

The Microsoft AZ-700 exam measures the candidate's ability to plan, implement, and manage Azure networking solutions, including virtual networks, load balancing, and network security. It also evaluates their understanding of Azure networking best practices, such as network topology design, network security design, and disaster recovery planning.

Microsoft AZ-700: Designing and Implementing Microsoft Azure Networking Solutions is a certification exam that is designed for individuals who are interested in gaining proficiency in various Azure networking solutions. AZ-700 Exam is designed to test the knowledge and skills of the individuals in designing and implementing Azure networking solutions, including virtual networks, load balancing, and network security.

Web-based AZ-700 Practice Test With Dumps

Microsoft trained experts have made sure to help the potential applicants of Microsoft AZ-700 certification to pass their Microsoft AZ-700 exam on the first try. Our PDF format carries real Designing and Implementing Microsoft Azure Networking Solutions exam dumps. You can use this format of Microsoft AZ-700 Actual Questions on your smart devices.

Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q105-Q110):

NEW QUESTION # 105
You are planning an Azure solution that will contain the following types of resources in a single Azure region:
* Virtual machine

* Azure App Service
* Virtual Network gateway
* Azure SQL Managed Instance
App Service and SQL Managed Instance will be delegated to create resources in virtual networks.
You need to identify how many virtual networks and subnets are required for the solution. The solution must minimize costs to transfer data between virtual networks.
What should you identify? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 106
SIMULATION
Task 6
You need to ensure that all hosts deployed to subnet3-2 connect to the internet by using the same static public IP address. The solution must minimize administrative effort when adding hosts to the subnet.

Answer:

Explanation:
See the Explanation below for step by step instructions
Explanation:
Here are the steps and explanations for ensuring that all hosts deployed to subnet3-2 connect to the internet by using the same static public IP address:
To use the same static public IP address for multiple hosts, you need to create a NAT gateway and associate it with subnet3-2. A NAT gateway is a resource that performs network address translation (NAT) for outbound traffic from a subnet1. It allows you to use a single public IP address for multiple private IP addresses2.
To create a NAT gateway, you need to go to the Azure portal and select Create a resource. Search for NAT gateway, select NAT gateway, then select Create3.
On the Create a NAT gateway page, enter or select the following information and accept the defaults for the remaining settings:
Subscription: Select your subscription name
Resource group: Select your resource group
Name: Type a unique name for your NAT gateway
Region: Select the same region as your virtual network
Public IP address: Select Create new and type a name for your public IP address. Select Standard as the SKU and Static as the assignment method4.
Select Review + create and then select Create to create your NAT gateway3.
To associate the NAT gateway with subnet3-2, you need to go to the Virtual networks service in the Azure portal and select your virtual network.
On the Virtual network page, select Subnets under Settings, and then select subnet3-2 from the list.
On the Edit subnet page, under NAT gateway, select your NAT gateway from the drop-down list. Then select Save.

NEW QUESTION # 107
Your company has offices in and Amsterdam. The company has an Azure subscription. Both offices connect to Azure by using a Site-to-Site VPN connection.
The office in Amsterdam uses resources in the North Europe Azure region. The office in New York uses resources in the East US Azure region.
You need to implement ExpressRoute circuits to connect each office to the nearest Azure region. Once the ExpressRoute circuits are connected, the on-premises computers in the Amsterdam office must be able to connect to the on-premises servers in the New York office by using the ExpressRoute circuits.
Which ExpressRoute option should you use?

- A. ExpressRoute FastPath
- B. ExpressRoute Global Reach
- C. ExpressRoute Direct
- D. ExpressRoute Local

Answer: B

Explanation:

https://docs.microsoft.com/en-us/azure/expressroute/expressroute-global-reach

NEW QUESTION # 108
You have an Azure subscription that contains the following resources:
A virtual network named Vnet1
Two subnets named subnet1 and AzureFirewallSubnet
A public Azure Firewall named FW1
A route table named RT1 that is associated to Subnet1
A rule routing of 0.0.0.0/0 to FW1 in RT1
After deploying 10 servers that run Windows Server to Subnet1, you discover that none of the virtual machines were activated.
You need to ensure that the virtual machines can be activated.
What should you do?

- A. Deploy an Azure Standard Load Balancer that has an outbound NAT rule
- B. Deploy an application security croup mat allows outbound traffic to 1688.

- C. Add an internet route to RI1 for the Azure Key Management Service (KMS).
- D. On fW1.configure a DNAT rule for port 1688.

Answer: C

NEW QUESTION # 109
Your company has offices in Montreal. Seattle, and Paris. The outbound traffic from each office originates from a specific public IP address.
You create an Azure Front Door instance named FD1 that has Azure Web Application Firewall (WAF) enabled. You configure a WAF policy named Policy! that has a rule named Rule1. Rule1 applies a rate limit of
100 requests for traffic that originates from the office in Montreal.
You need to apply a rate limit of 100 requests for traffic that originates from each office.
What should you do?

- A. Modify the conditions of Rule1.
- B. Modify the rate limit threshold of Rule1.
- C. Modify the rule type of Rule1.
- D. Create two additional associations.

Answer: A
