

Valid Braindumps CCAAK Free - CCAAK Latest Real Test

What's more, part of that Exam4Tests CCAAK dumps now are free: https://drive.google.com/open?id=1jAr0OCX9zbGq_35U9aa6M7dYjGblzhf

For the complete Confluent Certified Administrator for Apache Kafka exam preparation and success, the Exam4Tests CCAAK exam practice test questions are the best choice. With the Confluent CCAAK Exam Questions, you will get everything that you need to learn, prepare and succeed in the Confluent Certified Administrator for Apache Kafka certification exam. You must add Confluent CCAAK Exam Questions in your preparation and should not ignore them.

Confluent CCAAK Exam Syllabus Topics:

Topic	Details
Topic 1	• Troubleshooting: This section of the exam measures skills of a Kafka Administrator and includes diagnosing common issues in Kafka clusters. It covers problem areas such as performance bottlenecks, message delivery failures, replication issues, and consumer lag, along with techniques to resolve them effectively.
Topic 2	• Apache Kafka® Cluster Configuration: This section of the exam measures skills of a Kafka Administrator and includes configuring broker properties, tuning for performance, managing topic-level settings, and applying best practices for production-grade environments.
Topic 3	• Observability: This section of the exam measures skills of a Site Reliability Engineer and focuses on monitoring Kafka clusters. It assesses knowledge of metrics, logging, and alerting tools, including how to use them to maintain cluster health and performance visibility.
Topic 4	• Kafka Connect: This section of the exam measures skills of a Site Reliability Engineer and addresses the use and management of Kafka Connect for data integration. It includes setting up connectors, managing configurations, and ensuring efficient movement of data between Kafka and external systems.

Topic 5	• Apache Kafka® Security: This section of the exam measures skills of a Site Reliability Engineer and focuses on securing Kafka environments. It includes authentication mechanisms such as TLS and SASL, authorization using ACLs, and encrypting data at rest and in transit to ensure secure communication and access control.

Confluent CCAAK Latest Real Test - Interactive CCAAK Course

The punishment received by laziness is not only its own failure, but also the success of others. No one wants to be inferior to others. So, it's time to change yourself and make yourself better! Our CCAAK study materials want to give you some help on your dream journey. Believe me, the help you get is definitely what you need. On one hand, you can easily pass the CCAAK Exam and get the according CCAAK certification. On the other hand, you will be definitely encouraged to make better progress from now on.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q37-Q42):

NEW QUESTION # 37

When using Kafka ACLs, when is the resource authorization checked?

- A. The initial time the resource is accessed.
- B. When the client connection is first established.
- **C. Each time the resource is accessed.**
- D. Each time the resource is accessed within the configured authorization interval.

Answer: C

Explanation:

Kafka ACLs (Access Control Lists) perform authorization checks every time a client attempts to access a resource (e.g., topic, consumer group). This ensures continuous enforcement of permissions, not just at connection time or intervals. This approach provides fine-grained security, preventing unauthorized actions at any time during a session.

NEW QUESTION # 38

Your Kafka cluster has four brokers. The topic t1 on the cluster has two partitions, and it has a replication factor of three. You create a Consumer Group with four consumers, which subscribes to t1.

In the scenario above, how many Controllers are in the Kafka cluster?

- **A. One**
- B. three
- C. Four
- D. two

Answer: A

Explanation:

In a Kafka cluster, only one broker acts as the Controller at any given time. The Controller is responsible for managing cluster metadata, such as partition leadership and broker status. Even if the cluster has multiple brokers (in this case, four), only one is elected as the Controller, and others serve as regular brokers. If the current Controller fails, another broker is automatically elected to take its place.

NEW QUESTION # 39

Multiple clients are sharing a Kafka cluster.

As an administrator, how would you ensure that Kafka resources are distributed fairly to all clients?

- **A. Quotas**

- B. Consumer Groups
- C. ACLs
- D. Rebalancing

Answer: A

Explanation:

Kafka quotas allow administrators to control and limit the rate of data production and consumption per client (producer/consumer), ensuring fair use of broker resources among multiple clients.

NEW QUESTION # 40

What are benefits to gracefully shutting down brokers? (Choose two.)

- **A. It will migrate any partitions the server is the leader for to other replicas prior to shutting down.**
- B. It will automatically re-elect leaders on restart.
- C. It will balance the partitions across brokers before restarting.
- **D. It will sync all its logs to disk to avoid needing to do any log recovery when it restarts.**

Answer: A,D

Explanation:

A graceful shutdown ensures that logs are flushed to disk, minimizing recovery time during restart.

Kafka performs controlled leader migration during a graceful shutdown to avoid disruption and ensure availability.

NEW QUESTION # 41

A company has an existing Kafka cluster running without SSL/TLS enabled. The customer wants to enable SSL on brokers to secure data in transit, but they would like to give applications connecting to this cluster some time to migrate to using SSL connection instead of putting a hard stop.

Which solution will meet the customer's requirements?

- A. Enable SSL on the current listener, and do not implement SSL on application side.
- **B. Create a new listener with SSL enabled.**
- C. Modify the advertised listeners setting on brokers to use SSL.
- D. Enable SSL on the current Listener, and do not enable mTLS.

Answer: B

Explanation:

Kafka supports multiple listeners, allowing you to run PLAINTEXT and SSL simultaneously. By creating a new SSL-enabled listener (e.g., on a different port), existing applications can continue using PLAINTEXT while gradually migrating to the SSL listener. This approach avoids downtime and gives clients time to adapt without enforcing a hard cutover.

NEW QUESTION # 42

.....

Many customers want to check the content and quality of our CCAAK exam braindumps. So we developed trial versions for you. After you have used a trial version, you will have an overview of the content of the CCAAK simulating exam. This is enough to convince you that this is a product with high quality. If you are sure that you want this product, but we are not sure which version to buy, we can let you try multiple versions of CCAAK learning guide. And there are three varied versions on our website.
