What's more, part of that DumpTorrent HPE7-A06 dumps now are free: https://drive.google.com/open?id=1Du4pxyTSJR07Z_b_SHgfnDoRq69ZvQFI

Our HPE7-A06 learning materials are carefully compiled by industry experts based on the examination questions and industry trends in the past few years. The knowledge points are comprehensive and focused. You don't have to worry about our learning from HPE7-A06 exam question. We assure you that our HPE7-A06 learning materials are easy to understand and use the fewest questions to convey the most important information. As long as you follow the steps of our HPE7-A06 Quiz torrent, your mastery of knowledge will be very comprehensive and you will be very familiar with the knowledge points. This will help you pass the exam more smoothly.

With the advent of knowledge times, we all need some professional certificates such as HPE7-A06 to prove ourselves in different working or learning condition. So making right decision of choosing useful practice materials is of vital importance. Here we would like to introduce our HPE7-A06 practice materials for you with our heartfelt sincerity. With passing rate more than 98 percent from exam candidates who chose our HPE7-A06 study guide, we have full confidence that your HPE7-A06 actual test will be a piece of cake by them.

Customizable Practice Test for Improved Success in HP HPE7-A06 Certification Exam

DumpTorrent HP HPE7-A06 practice test software is the answer if you want to score higher in the HP HPE7-A06 exam and

achieve your academic goals. Don't let the HPE Campus Access Switching Expert Written Exam (HPE7-A06) certification exam stress you out! Prepare with our HPE Campus Access Switching Expert Written Exam (HPE7-A06) exam dumps and boost your confidence in the HPE Campus Access Switching Expert Written Exam (HPE7-A06) exam. We guarantee your road toward success by helping you prepare for the HPE Campus Access Switching Expert Written Exam (HPE7-A06) certification exam. Use the best DumpTorrent HP HPE7-A06 practice questions to pass your HPE Campus Access Switching Expert Written Exam (HPE7-A06) exam with flying colors!

HPE Campus Access Switching Expert Written Exam Sample Questions (Q22-Q27):

NEW QUESTION # 22

A pair of CX 8325 series switches is configured in a VSX cluster. Which function is executed on both VSX members during normal operation?

- A. routes PIM and PIM-DR
- **B. replies to ARP requests with the cluster vMAC**
- C. relays DHCP requests or serves DHCP offer
- D. periodically sends gratuitous ARP and broadcast hello packets

Answer: B

Explanation:

The question asks which function is executed on both VSX members (CX 8325 switches) during normal operation in a VSX cluster.

* Analysis of Options:

* Option A: Correct. Both VSX switches reply to ARP requests with the cluster's virtual MAC (vMAC) for SVIs configured with active-gateway, ensuring consistent Layer 3 forwarding.

* Option B: Incorrect. PIM (Protocol Independent Multicast) and PIM-DR roles are typically handled by one switch, not both, in a VSX cluster.

* Option C: Incorrect. DHCP relay or server functions are not necessarily performed by both switches simultaneously.

* Option D: Incorrect. Gratuitous ARP and broadcast hello packets are typically sent by the primary switch or specific protocols, not both VSX members for all cases.

* Why Option A is Correct: In a VSX cluster, the active-gateway feature allows both switches to respond to ARP requests for Switched Virtual Interfaces (SVIs) using a shared virtual MAC address (vMAC). This ensures seamless Layer 3 forwarding and high availability, as clients receive consistent ARP replies regardless of which VSX switch processes the request. The vsx-sync feature ensures the vMAC is synchronized, enabling both switches to perform this function during normal operation, as per HPE Aruba Networking's VSX architecture.

* Relevance to Certification Objectives:

* Network Resiliency and Virtualization (8%): Designing and troubleshooting VSX for redundancy and active-active forwarding.

* Switching (19%): Implementing Layer 2/3 technologies, including ARP handling in VSX.

* Routing (16%): Ensuring consistent Layer 3 operations in VSX environments.

References:

NEW QUESTION # 23

You are configuring an SSID that is using PSK as a security mechanism. Why should you use WPA3- Personal with WPA3 Transition Mode disabled?

- **A. WPA3-Personal with Transition Mode disabled is mandatory for 6 GHz-enabled networks.**
- B. WPA3-Personal with Transition Mode disabled is mandatory for 5 GHz-enabled networks.
- C. WPA3-Personal with Transition Mode disabled should be used to prevent legacy clients from connecting to the network.
- D. WPA3-Personal with Transition Mode disabled is optional for 6 GHz-enabled networks as there is a built-in fallback to 6 GHz mode with WPA2.

Answer: A

NEW QUESTION # 24

Match the BGP connection states to the conditions that could have caused that state.

Question Area		Answer Area
established	open confirm	The router is able to process update messages.
open sent	idle	The router is waiting for the neighbor's open message.
		Routers have agreed on matching feature sets.
		The session establishment has timed out.

Answer:

Explanation:

Question Area		Answer Area
established	open confirm	The router is able to process update messages.
open sent	idle	The router is waiting for the neighbor's open message.
		Routers have agreed on matching feature sets.
		The session establishment has timed out.

Explanation:

The router is able to process update messages. -->established

The router is waiting for the neighbor's open message. -->open sent

Routers have agreed on matching feature sets. -->open confirm

The session establishment has timed out. -->idle

This question requires matching BGP connection states from the BGP Finite State Machine (FSM) to descriptions of conditions that occur within or lead to those states.

* Idle: This is the initial state where BGP awaits a start event or retries after a failure. It's also the state entered upon error detection or session closure, including timeouts during connection attempts.

* Matches: "The session establishment has timed out." - A timeout during the connection process forces the BGP process back to the Idle state to potentially retry later.

* OpenSent: After a TCP connection is established, the local router sends a BGP OPEN message with its parameters (AS number, capabilities, etc.) and transitions to the OpenSent state while waiting to receive an OPEN message from its BGP neighbor.

* Matches: "The router is waiting for the neighbor's open message."

* OpenConfirm: Once the router receives an OPEN message from its neighbor and validates the parameters (e.g., matching AS, compatible capabilities), it sends a KEEPALIVE message and moves to the OpenConfirm state. It waits for a KEEPALIVE from the neighbor to confirm the session. Basic parameter checks and capability negotiations are successfully completed in this phase.

* Matches: "Routers have agreed on matching feature sets." - This agreement happens upon successful validation of the OPEN messages exchanged.

* Established: This is the final, stable state where BGP peering is successful. Both routers have accepted each other's parameters via the OPEN messages and confirmed the session with KEEPALIVES. In this state, the routers can exchange UPDATE messages containing routing information.

* Matches: "The router is able to process update messages."

References: RFC 4271 (BGP4 specification - Section 8, Finite State Machine), BGP configuration and troubleshooting guides for AOS-CX. This relates to the "Routing" (16%) and "Troubleshooting" (10%) objectives.

NEW QUESTION # 25

Exhibit.

After an initial setup of CX 8325 VSX configuration, the active gateway is set up for SVI 10. For testing purposes, SVI 10 on sw-aggi is shut down while traffic from the client connected to Edge-1 is initiated towards the default route. What is the expected behavior while performing this test?

- A. Traffic Is unaffected and a 50ms failover time is expected for agg-sw2 to start traffic forwarding.
- B. Traffic is potentially dropped between the client and the destination.
- C. Traffic is forwarded over the ISL without the risk of dropped packets.
- D. Traffic is dropped and vsx-sync will disable SVI10 on agg-sw2 automatically.

Answer: A

Explanation:

The question involves a VSX configuration with CX 8325 switches (agg-sw1 and agg-sw2) where SVI 10's active-gateway is set up. For testing, SVI 10 on agg-sw1 is shutdown, and traffic from a client connected to Edge-1 is initiated toward the default route. The task is to determine the expected behavior.

* Analysis of Options:

* Option A: Incorrect. Traffic is not dropped, as VSX ensures redundancy via the active-gateway on agg-sw2.

* Option B: Incorrect. Traffic does not traverse the ISL unnecessarily; agg-sw2 takes over directly.

* Option C: Correct. Traffic continues unaffected, with a 50ms failover time for agg-sw2 to assume forwarding responsibilities for SVI 10.

* Option D: Incorrect. Traffic is not dropped, and vsx-sync does not disable SVI 10 on agg-sw2; it ensures consistency.

* Why Option C is Correct: In a VSX cluster with active-gateway, both switches (agg-sw1 and agg-sw2) share a virtual IP and vMAC for SVI 10, allowing either to respond to ARP requests and forward traffic. Shutting down SVI 10 on agg-sw1 triggers agg-sw2 to take over Layer 3 forwarding, leveraging the active-gateway configuration. VSX's fast failover mechanism ensures a typical failover time of approximately 50ms, making the transition seamless for clients on Edge-1. The vsx-sync feature ensures SVI configurations remain consistent, preventing traffic disruption. This behavior aligns with HPE Aruba Networking's VSX high-availability design.

* Relevance to Certification Objectives:

* Network Resiliency and Virtualization (8%): Designing and troubleshooting VSX for high availability.

* Routing (16%): Ensuring seamless Layer 3 forwarding in VSX environments.

* Troubleshooting (10%): Diagnosing failover behavior in campus networks.

NEW QUESTION # 26

You are configuring an SSID that is using 802.11ax as a security mechanism. What is the reason for using WPA3-Enterprise (CCM-128) when deploying Wi-Fi 6 networks?

- A. WPA3-Enterprise (CCM-128) is also called WPA3-Enterprise Transition Mode. It will allow WPA2 clients to connect.
- B. WPA3-Enterprise (CCM-128) is also called WPA3-Enterprise Compatibility Mode. It will allow WPA2 clients to connect.
- C. WPA3-Enterprise (CCM-128) is also called WPA3-Enterprise Only Mode. There is no support for WPA2 clients.
- D. WPA3-Enterprise (CCM-128) is also called WPA3-Enterprise 192-bit mode. It is WPA3 only and enforces specific EAP certificate ciphers.

Answer: A

Explanation:

The question asks for the reason for using WPA3-Enterprise (CCM-128) when deploying Wi-Fi 6 networks.

* WPA3-Enterprise Modes:

* CCM-128: Uses AES-CCMP-128 (same cipher as WPA2). Its main purpose is to provide a transition path from WPA2 to WPA3. It allows both WPA3-capable and WPA2-only clients to connect to the same SSID. It enforces Protected Management Frames (PMF, 802.11w) when possible (required for WPA3, optional for WPA2). It's often called "Transition Mode" or "Compatibility Mode".

* GCMP-256: Uses stronger AES-GCMP-256. It operates in "WPA3-Only Mode" and does not allow WPA2 clients.

* Wi-Fi 6 (802.11ax) & WPA3: Wi-Fi 6 certification requires support for WPA3.

* Analysis of Options:

* A: Incorrectly calls CCM-128 "192-bit mode" and "WPA3 only".

* B: Correctly calls CCM-128 "Transition Mode" and states it allows WPA2 clients.

* C: Correctly calls CCM-128 "Compatibility Mode" and states it allows WPA2 clients.

"Compatibility Mode" and "Transition Mode" are used interchangeably for this WPA3 mode.

* D: Incorrectly calls CCM-128 "Only Mode" and states no WPA2 support.

* Conclusion: Both Option B and Option C accurately describe WPA3-Enterprise (CCM-128). It is designed as a transition/compatibility mode to allow environments to adopt WPA3 features (like mandatory PMF for capable clients) while still supporting legacy WPA2 clients on the same network during the migration period. Selecting either B or C would be functionally correct based on common terminology.

References: Wi-Fi Alliance WPA3 specifications, Aruba WPA3 deployment guides, 802.11ax standard information. This relates to the "WLAN" (9%) and "Security" (10%) objectives.

NEW QUESTION # 27

.....

In the era of rapid development in the IT industry, we have to look at those IT people with new eyes. They use their high-end technology to create many convenient places for us. And save a lot of manpower and material resources for the state and enterprises. And even reached unimaginable effect. Of course, their income must be very high. Do you want to be the kind of person? Do you envy them? Or you are also IT person, but you do not get this kind of success. Do not worry, DumpTorrent's HP HPE7-A06 Exam Material can help you to get what you want. To select DumpTorrent is equivalent to choose a success.
