

Valid Braindumps ITIL-4-Practitioner-Deployment-Management Ebook, Valid ITIL-4-Practitioner-Deployment-Management Exam Labs

Salesforce DEX-450 Programmatic Development using Apex and Visualforce in Lightning Experience

DEX-450 Valid Braindumps Ebook | Exam DEX-450 Torrent

The pressure we face comes from all aspects. As the social situation changes, these pressures will only increase. We cannot change the external environment. What we can do is improve our own strength. However, blindly taking measures may have the opposite effect. So here comes your best assistant-our [DEX-450 Practice Engine](#). If you study with our DEX-450 exam materials, you can become better not only because that you can learn more, but also because you can get the admired DEX-450 certification.

Salesforce DEX-450 certification exam is a valuable credential for Salesforce developers who want to demonstrate their expertise in programmatic development using Apex and Visualforce in Lightning Experience. Programmatic Development using Apex and Visualforce in Lightning Experience certification provides a competitive edge in the job market and helps developers to advance their careers in Salesforce development.

Salesforce DEX-450 exam is designed for professionals who are looking to enhance their knowledge and skills in programmatic development using Apex and Visualforce in a Lightning Experience. Programmatic Development using Apex and Visualforce in Lightning Experience certification exam measures the candidate's ability to design, develop, test, and deploy custom applications using these technologies. Passing DEX-450 exam demonstrates the candidate's proficiency in the Salesforce platform's programmatic development environment and sets them apart as an expert in this field.

2025 Latest PassReview ITIL-4-Practitioner-Deployment-Management PDF Dumps and ITIL-4-Practitioner-Deployment-Management Exam Engine Free Share: <https://drive.google.com/open?id=1mEirynHSImEXFLgXM0Q5VzCn3jgbca1>

With so many years' development, we can keep stable high passing rate for Peoplecert ITIL-4-Practitioner-Deployment-Management exam. You will only spend dozens of money and 20-30 hours' preparation on our Peoplecert ITIL-4-Practitioner-Deployment-Management Test Questions, passing exam is easy for you. Peoplecert ITIL-4-Practitioner-Deployment-Management exam cram PDF will be the right shortcut for your exam.

Peoplecert ITIL-4-Practitioner-Deployment-Management Exam Syllabus Topics:

Topic	Details
Topic 1	• Roles and competencies: This section of the exam measures the skills of a Change Implementation Lead and focuses on identifying essential roles within Deployment Management and the competencies needed to perform them effectively. It explores how to position deployment responsibilities within an organization and what skill sets are necessary to ensure deployment tasks are carried out successfully.

Topic 2	• Key concepts: This section of the exam measures the skills of a Service Transition Manager and covers the fundamental purpose of Deployment Management. It highlights why the structured management of service deployment is crucial for delivering new or modified services into the live environment efficiently while minimizing disruption and ensuring continuity in business operations.
Topic 3	• Practice success factors: This section of the exam measures the skills of a Change Implementation Lead and focuses on understanding practice success factors and the core metrics used to evaluate deployment effectiveness. It emphasizes the importance of tracking efficiency and success in service deployment and how these metrics help improve the overall stability and agility of the service transition process.
Topic 4	• The ITIL Capability model: This section of the exam measures the skills of a Service Transition Manager and introduces how capability criteria contribute to developing and maturing Deployment Management practices. It focuses on aligning organizational capabilities with ITIL best practices to maintain consistency, quality, and effectiveness in service transitions.
Topic 5	• Partners and suppliers: This section of the exam measures the skills of a Change Implementation Lead and examines the influence of partners and suppliers in the deployment process. It highlights the importance of effective collaboration and communication with external stakeholders to ensure that deployments are delivered according to expectations and with minimal risks.
Topic 6	• Practice processes: This section of the exam measures the skills of a Service Transition Manager and delves into the key processes that shape Deployment Management. It outlines how these processes and activities can be aligned with the organization's value stream to ensure that deployments are well-planned, coordinated, and delivered without disrupting existing services.
Topic 7	• Practice success: This section of the exam measures the skills of a Change Implementation Lead and explains how to achieve success with Deployment Management through the application of ITIL guiding principles. It focuses on strategies that help establish a robust and value-driven deployment approach that aligns with business objectives and delivers measurable outcomes.

ITIL-4-Practitioner-Deployment-Management - Fantastic Valid Braindumps ITIL 4 Practitioner: Deployment Management Ebook

As job seekers looking for the turning point of their lives, it is widely known that the workers of recruitment is like choosing apples--viewing resumes is liking picking up apples, employers can decide whether candidates are qualified by the ITIL-4-Practitioner-Deployment-Management appearances, or in other words, candidates' educational background and relating ITIL-4-Practitioner-Deployment-Management professional skills. They develop the ITIL-4-Practitioner-Deployment-Management exam guide targeted to real exam. The wide coverage of important knowledge points in our ITIL-4-Practitioner-Deployment-Management latest braindumps would be greatly helpful for you to pass the exam.

Peoplecert ITIL 4 Practitioner: Deployment Management Sample Questions (Q12-Q17):

NEW QUESTION # 12

[Apply Deployment Management Processes]

An organization is deploying new software and new servers to support a service that will be launched soon. Which TWO of these activities should the organization conduct as part of the 'verification of the service components' activity of the 'deployment lifecycle management' process?

Checking that the correct models of server have been supplied

Testing the software for defects

Creating a schedule for installing the new servers

Installing the new software to the newly installed servers

- A. 1 and 4

- B. 1 and 2
- C. 3 and 4
- D. 2 and 3

Answer: B

Explanation:

In ITIL 4, the 'verification of service components' activity within the deployment lifecycle management process ensures that delivered components meet specifications before deployment. The correct activities are:

Activity 1 (Checking that the correct models of server have been supplied): Part of verification, as it confirms that the hardware components match requirements.

Activity 2 (Testing the software for defects): Part of verification, as it ensures the software is functional and free of critical issues before deployment.

Activity 3 (Creating a schedule for installing the new servers): Incorrect, as scheduling is a planning activity, not verification.

Activity 4 (Installing the new software to the newly installed servers): Incorrect, as installation is part of the deployment execution, not verification.

NEW QUESTION # 13

[Integrate Deployment Management with Other Practices]

A large multi-national organization uses DevOps principles to enable fast and effective development and implementation of software products. Each product team has a lot of independence, but a centralized IT governance team ensures consistency and adherence to the organization's policies. Different people within the organization have different opinions about whether deployment management should be centralized or distributed among the teams. How should the deployment management practice be implemented and managed in this organization to ensure that the practice meets their needs?

- A. A centralized deployment management team should support the product teams by providing guidance and tooling
- B. Each development team should have an independent deployment manager who owns all aspects of deployment within that team
- C. Software developers in each team should take full responsibility for deployment of software that they develop
- D. A centralized deployment management team should manage and coordinate deployments for all development teams

Answer: A

Explanation:

In a DevOps environment with independent product teams and centralized governance, ITIL 4 recommends balancing autonomy with consistency. Option C, where a centralized deployment management team supports product teams by providing guidance and tooling, aligns with this approach. It ensures that teams retain flexibility to deploy efficiently while benefiting from standardized tools, best practices, and governance, maintaining organizational alignment and reducing risks of inconsistency.

Option A (Each development team should have an independent deployment manager who owns all aspects of deployment within that team): Incorrect, as fully independent deployment managers per team could lead to inconsistent practices and tools, undermining centralized governance and creating silos.

Option B (A centralized deployment management team should manage and coordinate deployments for all development teams): Incorrect, as centralizing all deployment activities reduces team autonomy, contradicting DevOps principles of empowering teams and slowing down delivery.

Option C (A centralized deployment management team should support the product teams by providing guidance and tooling): Correct, as it supports DevOps autonomy while ensuring consistency through shared tools (e.g., CI/CD pipelines) and guidance, aligning with ITIL 4's focus on value co-creation and governance.

Option D (Software developers in each team should take full responsibility for deployment of software that they develop): Incorrect, as while developers often handle deployments in DevOps, completely bypassing a structured deployment management practice risks non-compliance with governance and inconsistent outcomes.

NEW QUESTION # 14

[Integrate Deployment Management with Other Practices]

An organization's end users have complained that major software updates happen during work hours, with insufficient notice, and sometimes disrupt users' work for an unacceptably long time. The deployment manager already has close alignment with the release manager and release processes, and has implemented CI/CD. What is the BEST action for the organization to take to ensure new software features are relevant to the end-users?

- A. Align with the change enablement manager to improve the change planning procedures

- B. Embed validation and testing within the deployment models
- C. Integrate deployment management and configuration management activities to improve version control
- D. Use infrastructure as code to support the software deployment

Answer: A

Explanation:

The issue involves poor timing, lack of notice, and disruptions from deployments, which points to deficiencies in change planning and communication. ITIL 4 emphasizes aligning deployment with change enablement to ensure changes are scheduled and communicated effectively, addressing user concerns. Option C, aligning with the change enablement manager to improve change planning procedures, directly tackles these issues by ensuring deployments are timed appropriately, users are informed, and disruptions are minimized, while also ensuring feature relevance through better planning.

Option A (Use infrastructure as code to support the software deployment): Incorrect, as IaC improves environment consistency but does not address scheduling, notice, or user relevance issues.

Option B (Embed validation and testing within the deployment models): Incorrect, as while testing improves quality, it does not resolve timing or communication problems affecting users.

Option C (Align with the change enablement manager to improve the change planning procedures): Correct, as change enablement ensures deployments are planned with user needs in mind, including timing, communication, and relevance of features.

Option D (Integrate deployment management and configuration management activities to improve version control): Incorrect, as version control enhances deployment accuracy but does not address user complaints about timing or disruption.

NEW QUESTION # 15

[Understand the Key Concepts of Deployment Management]

Which is a key feature of continuous deployment which is not found in other CI/CD stages?

- A. It predominantly uses staging environments
- B. It allows individual decisions about software releases
- C. It automatically tests software code
- **D. It enables users to benefit immediately from changes**

Answer: D

Explanation:

Continuous deployment (CD) in ITIL 4 is the most advanced stage of the CI/CD pipeline, where every validated change is automatically deployed to production without manual intervention. The key feature unique to continuous deployment, not found in continuous integration or continuous delivery, is that it enables users to benefit immediately from changes (Option B), as changes reach production instantly after passing automated tests.

Option A (It automatically tests software code): Incorrect, as automated testing is a feature of continuous integration and continuous delivery, not unique to continuous deployment.

Option B (It enables users to benefit immediately from changes): Correct, as continuous deployment automatically pushes validated changes to production, delivering value to users without delay, unlike other CI/CD stages.

Option C (It predominantly uses staging environments): Incorrect, as continuous deployment minimizes reliance on staging environments, deploying directly to production.

Option D (It allows individual decisions about software releases): Incorrect, as continuous deployment eliminates manual release decisions, relying on automation for consistency.

NEW QUESTION # 16

[Understand Roles and Responsibilities]

A fast-growing service provider is introducing separate roles of deployment manager and deployment practitioner. Which TWO activities is a deployment manager responsible for?

Ensuring that deployment records are up-to-date and correct

Prioritizing multiple deployments that require use of the same resources
Ensuring deployment plans support other service management plans
Capturing and verifying users' opinions on deployments

- **A. 2 and 3**
- B. 1 and 4
- C. 3 and 4
- D. 1 and 2

Answer: A

Explanation:

In ITIL 4, the deployment manager role focuses on strategic and coordinating activities, such as overseeing resource allocation and aligning deployment plans with broader service management objectives. The correct activities are:

Activity 2 (Prioritizing multiple deployments that require use of the same resources): A deployment manager ensures efficient resource use by prioritizing conflicting deployments, a key managerial responsibility.

Activity 3 (Ensuring deployment plans support other service management plans): The deployment manager aligns deployment activities with other practices (e.g., change enablement, release management) to ensure coherence across service management, another strategic task.

Activity 1 (Ensuring that deployment records are up-to-date and correct): This is typically a task for a deployment practitioner, who handles operational details like record-keeping, not a manager's core responsibility.

Activity 4 (Capturing and verifying users' opinions on deployments): This aligns more with practices like relationship management or service desk activities, not the deployment manager's role, which focuses on planning and execution rather than user feedback collection.

NEW QUESTION # 17

.....

All points of questions are correlated with the newest and essential knowledge. The second one of ITIL-4-Practitioner-Deployment-Management test guide is emphasis on difficult and hard-to-understand points. Experts left notes for your reference, and we believe with their notes things will be easier. In addition, the new supplementary will be sent to your mailbox if you place order this time with beneficial discounts at intervals. So our ITIL-4-Practitioner-Deployment-Management Exam Questions mean more intellectual choice than other practice materials.
