## NEW QUESTION # 88

Drag and Drop Question

You need to recommend a security solution to monitor the following activities:

- User accounts that were potentially compromised
  - Users performing bulk file downloads from Microsoft SharePoint Online
- What should you include in the recommendation for each activity? To answer, drag the appropriate components to the correct activities. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Components	Answer Area

**Answer:**

Components	Answer Area
A data loss prevention (DLP) policy	
Azure Active Directory (Azure AD) Conditional Access	
Azure Active Directory (Azure AD) Identity Protection	User accounts that were potentially compromised: Azure Active Directory (Azure AD) Identity Protection
Microsoft Defender for Cloud	Users performing bulk file downloads from SharePoint Online: Microsoft Defender for Cloud Apps
Microsoft Defender for Cloud Apps	

Explanation:

Box 1: Azure Active Directory (Azure AD) Identity Protection

Risk detections in Azure AD Identity Protection include any identified suspicious actions related to user accounts in the directory.

Risk detections (both user and sign-in linked) contribute to the overall user risk score that is found in the Risky Users report.

Identity Protection provides organizations access to powerful resources to see and respond quickly to these suspicious actions.

Note:

Premium sign-in risk detections include:

- \* Token Issuer Anomaly - This risk detection indicates the SAML token issuer for the associated SAML token is potentially compromised. The claims included in the token are unusual or match known attacker patterns.

- \* Suspicious inbox manipulation rules - This detection is discovered by Microsoft Defender for Cloud Apps. This detection profiles your environment and triggers alerts when suspicious rules that delete or move messages or folders are set on a user's inbox. This detection may indicate that the user's account is compromised, that messages are being intentionally hidden, and that the mailbox is being used to distribute spam or malware in your organization.

- \* Etc.

Incorrect:

Not: Microsoft 365 Defender for Cloud

Part of your incident investigation can include user accounts. You can see the details of user accounts identified in the alerts of an incident in the Microsoft 365 Defender portal from Incidents & alerts > incident > Users.

Box 2: Microsoft 365 Defender for App

Defender for Cloud apps detect mass download (data exfiltration) policy Detect when a certain user accesses or downloads a massive number of files in a short period of time.
