Users can customize the time and C-S4TM-2023 questions of SAP C-S4TM-2023 Practice Tests according to their needs. You can give more than one test and track the progress of your previous attempts to improve your marks on the next try.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Transportation Management Sample Questions (Q67-Q72):

NEW QUESTION # 67

Purchase order integration to SAP TM is achieved using output control, determine whether this statement is true or false.

- A. false
- B. true

Answer: A

NEW QUESTION # 68

What is automatically determined based on the object being transferred from ERP when location data is created via the CIF. Please choose the correct answer.

- A. The location type
- B. Give operators
- C. Intuitive mobile
- D. MES Access

Answer: A

NEW QUESTION # 69

In a strategic freight procurement process how can you influence that fuel surcharge do NOT Exceed the base charges quoted by a carrier?

- A. Define target shares
- B. Define business shares
- C. Enable bonus-malus logic
- D. Publish target rates

Answer: D

NEW QUESTION # 70

You want to set up charge calculation for freight orders. Valid charges should consist of a base charge based on the distance and gross weight of the freight order, and a supplemental charge per container that is included in the freight order. Multiple containers are allowed for each freight order, and the charge is based on the container type. The container type can be small, medium, or large. What is the minimum number of charge lines with instruction type "standard" that you must set up?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

To set up charge calculation for freight orders in SAP S/4HANA Transportation Management, you need to define charge lines in the calculation sheet with the instruction type "standard" to represent the different types of charges. According to the SAP documentation:

* A base charge based on distance and gross weight requires one charge line with instruction type "standard" to calculate the cost using a rate table that considers these parameters.

* A supplemental charge per container based on container type (small, medium, large) requires a second charge line with instruction type "standard" to apply the container-specific charge, which can be defined in a rate table with scales for container types. Since the requirement involves two distinct charge calculations (base charge and container charge), the minimum number of charge lines with instruction type "standard" is 2.

The other options are incorrect:

- * A (0) is not possible, as charges require at least one charge line.
- * C (1) is insufficient, as it cannot cover both the base charge and container charge.
- * D (3) is unnecessary, as the container types can be handled within a single charge line using a rate table with scales.
