According to free trial downloading, you will know which version is more suitable for you.

Google Chrome-Enterprise-Administrator Exam Syllabus Topics:

| Topic | Details |
|---------|--|
| Topic 1 | <ul style="list-style-type: none">• Chrome Updates: This section of the exam measures skills of a Chrome IT Policy Analyst and addresses the various update methods available for Chrome. It includes selecting the right update strategy for different business and security needs, managing compliance across platforms, and adapting update methods based on environmental changes or risks. |

| | |
|---------|--|
| Topic 2 | <ul style="list-style-type: none"> • Analyze Chrome Data: This section of the exam measures skills of a Chrome Data Analyst and focuses on using the Google Admin console to view, analyze, and troubleshoot browser data. It includes reviewing reports, diagnosing browser or update issues, investigating performance problems, and identifying security risks based on log events and Chrome activity. |
| Topic 3 | <ul style="list-style-type: none"> • Manage Chrome Enterprise in the Cloud: This section of the exam measures skills of a Cloud Systems Administrator and focuses on preparing and configuring environments for Chrome cloud management. Candidates must demonstrate how to verify domains, use admin roles, configure organizational structures, deploy enrollment tokens, enable reporting, and maintain Chrome using the Google Admin console. |
| Topic 4 | <ul style="list-style-type: none"> • Chrome Enterprise Management Fundamentals: This section of the exam measures skills of a Chrome Device Administrator and covers the foundational elements of managing Chrome in an enterprise. It includes understanding how policies are applied and resolved, differentiating managed browsers from profiles, and describing how policies work. It also covers Chrome's built-in security features, how extensions are used and deployed, and how the release cycle and channels are managed. |
| Topic 5 | <ul style="list-style-type: none"> • Chrome Extensions: This section of the exam measures skills of an Endpoint Security Manager and involves managing Chrome extension policies. It includes designing extension management strategies, handling extension exemptions, creating approval workflows, and assessing extensions for their risk and compliance with business continuity requirements. |

Valid Google Chrome-Enterprise-Administrator test questions & Chrome-Enterprise-Administrator braindumps files & Chrome-Enterprise-Administrator test engine

After using our software, you will know that it is not too difficult to pass Chrome-Enterprise-Administrator exam. You will find some exam techniques about how to pass Chrome-Enterprise-Administrator exam from the exam materials and question-answer analysis provided by our DumpsQuestion. Besides, to make you be rest assured of our dumps, we provide Chrome-Enterprise-Administrator Exam Demo for you to free download.

Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q43-Q48):

NEW QUESTION # 43

An external entity is conducting a penetration test on an organization's Chrome Browser environment. They report that a significant number of Manifest V2 (MV2) extensions are installed, none of which are critical to business operations. IT leadership has requested either block or upgrade. How should an administrator proceed?

- A. Auto-upgrade the extensions from MV2 to MV3
- B. Collect the extension IDs and configure an installation policy of block
- **C. Configure the Manifest V2 availability policy**
- D. Configure the installation mode to reflect removed for each extension ID

Answer: C

Explanation:

Given that the MV2 extensions are not critical, and the requirement is to either block or upgrade, the most direct and efficient approach is to configure the "Manifest V2 availability" policy. This policy allows administrators to control the usage of Manifest V2 extensions, including blocking them entirely or allowing them until a specified date. Option A involves manually collecting and blocking each extension, which is less efficient. Option C ("removed") is not a standard installation mode policy. Option D is not a policy that an administrator can directly configure; the upgrade to MV3 is a developer-driven process.

NEW QUESTION # 44

An administrator is using Organizational Units (OU) to apply different Chrome browser settings to different types of devices. The administrator needs to ensure that the browsers are placed in the correct OU. Which token must the administrator generate and apply?

- A. Cloud Management Token
- B. Browser Policy Token
- C. Device Management Token
- **D. Enrollment Token**

Answer: D

Explanation:

The ****Enrollment Token**** is the key to associating a Chrome browser instance with a specific organizational unit (OU) in the Google Admin console during the enrollment process. By applying the correct enrollment token during setup, the browser will be placed in the designated OU and inherit the policies configured for that OU. Device Management Tokens are more relevant for ChromeOS devices. Browser Policy Tokens are not a standard term for OU assignment during enrollment. Cloud Management Token is a general term encompassing the enrollment process.

NEW QUESTION # 45

Which operating system must be used to self-host a Chrome extension*?

- **A. Linux**
- B. macOS
- C. Windows 11
- D. ChromeOS

Answer: A

Explanation:

While the provided study guide doesn't explicitly detail the OS requirements for self-hosting Chrome extensions, general web hosting best practices suggest that Linux is a common and robust platform for serving files and managing web-related services. Its open-source nature, command-line interface, and extensive server software support make it well-suited for self-hosting compared to desktop-centric operating systems like Windows 11 or macOS, and the client-focused ChromeOS. Self-hosting typically involves setting up a web server to distribute the extension files, a task commonly performed on Linux servers.

NEW QUESTION # 46

A company is managing browsers in the Google Admin console. Security has scanned extensions in the organization and has determined that there are several extensions installed with the ability to set proxy. This violates company policy. How would an administrator block these extensions'?

- A. Remotely connect to each device and delete the extension from the browser
- B. Send an email to the users notifying them that they must uninstall the detected extensions
- **C. Set permission policy in the Google Admin console to block such extensions**
- D. Set policy in the Google Admin console to block all extensions from being installed on the browser

Answer: C

Explanation:

The Google Admin console allows administrators to control extension permissions. By configuring the "Permissions and URL access" policy, the administrator can block extensions that request specific permissions, such as the ability to set a proxy. This is a centralized and effective way to enforce the security policy. Remotely connecting to each device (option B) is not scalable. Blocking all extensions (option C) might be too restrictive. Relying on users to uninstall (option D) is not enforceable.

NEW QUESTION # 47

An organization experiences a recent surge in account takeovers and suspicious activity. Upon investigation, a security team discovers that employees are falling victim to info-stealer malware specifically designed to target Chrome browser cookies. This malware is spreading through phishing emails and compromised websites, and it is capable of stealing session cookies, login credentials, and other sensitive information stored in the browser. Which measure can an administrator implement using Chrome Enterprise Core to

mitigate the risks posed by cookie theft?

- A. Block the use of third-party cookies
- B. Disallow Chrome Sync and Require Incognito mode
- C. Invalidate user's session cookies and tokens by resetting the sign-in cookies from the Google Admin console
- **D. Require Enhanced Safe Browsing and enable Application Bound Encryption**

Answer: D

Explanation:

To combat cookie theft from infostealer malware, requiring "Enhanced Safe Browsing" provides proactive protection against malicious websites and downloads that might distribute such malware. Enabling

"Application Bound Encryption" adds an extra layer of security to cookies and other sensitive data stored by Chrome, making them harder for malware to use even if stolen. Blocking third-party cookies (option A) can improve privacy but doesn't directly prevent malware from stealing first-party session cookies. Invalidating existing cookies (option C) is a reactive measure and doesn't prevent future theft. Disallowing Chrome Sync and requiring Incognito mode (option D) changes user behavior but doesn't inherently protect against malware on the local machine.

NEW QUESTION # 48

.....

We very much welcome you to download the trial version of Chrome-Enterprise-Administrator practice engine. Our ability to provide users with free trial versions of our Chrome-Enterprise-Administrator exam questions is enough to prove our sincerity and confidence. And we have three free trial versions according to the three version of the Chrome-Enterprise-Administrator study braindumps: the PDF, Software and APP online. And you can try them one by one to know their functions before you make your decision. It is better to try before purchase.
