Get Up-to-Date Valid ChromeOS-Administrator Test Answers to Pass the ChromeOS-Administrator Exam

When prepare a exam, we may face the situation like this: there are so many books in front of me, which one should I choose for preparing for the exam? If you are ready to attentd the ChromeOS-Administrator exam, then just choose us, our product is the one you can trust, with the experienced professionals to expect and update, the quality of the product is quite high. Furthermore, our company respect the privacy of the customers, with our product, there is no need for you to worry about the probleml. Except for this, if you buy product for the ChromeOS-Administrator Exam, you will get the free update for one year, and money back gurantee within 60 days after you buy it, so don't hesitate, just do it.

Google Professional ChromeOS Administrator Exam Sample Questions (Q95-Q100):

NEW QUESTION # 95
You need to get to the enterprise enrollment screen. What should you do?

- A. Press Ctrl-Alt-F on the initial welcome screen to set initial settings
- B. Press Ctrl-Alt-E at the user login screen before any user has signed in to the device
- C. Sign in with enterprise enrollment credentials provided by the customer at the user sign-in screen
- D. Press Ctrl-Alt-E during the Chrome bootup sequence (Chrome logo animation)

Answer: D

Explanation:
* Power on or reboot the Chromebook.
* Watch for the Chrome logo animation.This is the key moment to trigger enterprise enrollment.
* Press Ctrl+Alt+E simultaneously.This keyboard shortcut interrupts the normal boot process and redirects the Chromebook to the enterprise enrollment screen.
* Follow the on-screen instructions.You'll be prompted to enter information such as the domain name of the organization and enrollment credentials.
Why this is the correct method:
* Enterprise Enrollment Timing:The Ctrl+Alt+E shortcut is specifically designed to be used during the bootup sequence, before any user profile is loaded. This ensures the device is enrolled in the organization's management system from the start.
* Alternative Options:The other options mentioned are incorrect:
* B (Sign in with credentials):This assumes the device is already enrolled and is used for regular user login.
* C (Ctrl+Alt+F):This shortcut is used for accessing the ChromeOS developer shell (Crosh) and is not related to enrollment.
* D (Ctrl+Alt+E at login):While technically possible to enroll at the login screen, it's not the recommended method as it might not apply settings correctly to all user profiles.

NEW QUESTION # 96
Within what time frame does the ChromeOS Flex upgrade transfer program support reusing Chrome Education/Enterprise Upgrades?

- A. 1 year
- B. 3 years
- C. 6 months
- D. 2 years

Answer: A

Explanation:
TheChromeOS Flex upgrade transfer programallows organizations to reuse Chrome Education or Enterprise Upgrades within1 yearof deprovisioning or transferring the device. This policy is designed to ensure that licenses can be reused efficiently when upgrading or replacing devices.
Verified Answer from Official Source:
The correct answer is verified from theChromeOS Flex Upgrade Transfer Policy, which states that licenses can be reused within a 1-year period following device deprovisioning.
"The ChromeOS Flex upgrade transfer program permits reuse of licenses within one year of the device being deprovisioned or transferred." This policy helps organizations maintain cost efficiency when transitioning from older ChromeOS devices to ChromeOS Flex devices.
Objectives:
* Efficient license management during device transitions.
* Maximize the use of Chrome Education/Enterprise Upgrades.

NEW QUESTION # 97
Which setting is required to restrict Chrome Remote Desktop use to only accounts on your domain?

- A. Chrome Remote Denton review

- B. Firewall traversal
- C. Remote access clients
- D. URL Blocking

Answer: C

Explanation:
Within the "Chrome Remote Desktop" settings in the Google Admin console, the option "Remote access clients" allows you to restrict access to Chrome Remote Desktop based on the domain of the user accounts. By configuring this setting, you can ensure that only users with accounts on your specific domain can access Chrome Remote Desktop on the managed devices.
Why other options are incorrect:
* A. Firewall traversal: This setting controls whether Chrome Remote Desktop can bypass firewalls to establish connections, but it does not restrict access based on domain.
* B. URL Blocking: This setting controls which websites users can access but does not specifically apply to Chrome Remote Desktop access based on domain.
* D. Chrome Remote Desktop review: This setting allows administrators to review Chrome Remote Desktop sessions but does not restrict access based on domain.

NEW QUESTION # 98
You have been asked to explain the built-in security features of ChromeOS. What i3 the benefit of having verified boot enabled on a ChromeOS device?

- A. It allows updates to happen in the background
- B. Running both operating systems on one device at the same time makes It twice as powerful
- C. It installs the known safe backup OS every time the device is slatted up.
- D. It ensures that the OS is uncompromised

Answer: D

Explanation:
Verified Boot in ChromeOS is a security mechanism that checks the integrity of the operating system during startup. If it detects any unauthorized modifications or compromises, it can initiate recovery processes to restore the OS to a known good state, ensuring that the device boots up with a secure and untampered operating system.
Option B is incorrect because background updates are a separate feature.
Option C is incorrect because dual-boot is not related to Verified Boot.
Option D is incorrect because Verified Boot doesn't install a backup OS but verifies the existing one.

NEW QUESTION # 99
You are tasked with converting hundreds of Windows & Mac machines across multiple locations to ChromeOS Flex and enrolling them into the Admin console. The available network bandwidth Is limited at many of the locations and the devices are not currently managed with any endpoint management system.
Which two operations are required to perform the task?
Choose 2 answers

- A. Distribute USB flash drives with the ChromeOS Flex image to the different locations and ask local personnel or a services partner to manually convert each device
- B. Create a dedicated enrollment account tor each location and place them into the OUs you want the devices enrolled into then enable the 'Place ChromeOS device in user organization" policy and enroll the devices using the respective enrollment account for each location
- C. Contact an authorized Zero-Touch Enrollment (ZTE) reseller and share the serial numbers of the devices you're converting and the domain you're enrolling them into to have them pre-provisioned into the Admin console
- D. Install the Recovery Tool extension on all devices that are to be converted and follow the step-by-step installer to convert each device directly without the need of USB drives
- E. Use PXE boot to load the ChromeOS Flex image onto devices and have them automatically convert across all locations after they're restarted

Answer: A,B

Explanation:
* Create Dedicated Enrollment Accounts: Create separate enrollment accounts for each location, placing them in the respective OUs where the converted devices should be enrolled.
* Enable Policy: Turn on the "Place ChromeOS device in user organization" policy. This ensures devices are automatically enrolled into the correct OU based on the enrollment account used.
* Enroll Devices: Use the dedicated enrollment account for each location to enroll the converted devices. This allows for organized management based on location.
Option E:
* Distribute USB Drives: Prepare USB flash drives with the ChromeOS Flex image and distribute them to the different locations.
* Manual Conversion: Instruct local personnel or a service partner to manually convert each device
* using the provided USB drives. This method is suitable when network bandwidth is limited and doesn't rely on existing endpoint management infrastructure.
Reasons for not choosing other options:
* Option B: The Recovery Tool is primarily used for creating recovery media for ChromeOS devices, not converting other operating systems.
* Option C: PXE boot is a network-based installation method, not ideal for locations with limited bandwidth.
* Option D: While zero-touch enrollment (ZTE) streamlines enrollment, it requires pre-provisioning devices with the vendor or reseller, which might not be feasible in this scenario.
By combining options A and E, you can efficiently convert and enroll devices in multiple locations with limited network resources and no existing management systems.

NEW QUESTION # 100
......

If you have tried on our ChromeOS-Administrator exam questions, you may find that our ChromeOS-Administrator study materials occupy little running memory. So it will never appear flash back. If you want to try our ChromeOS-Administrator learning prep, just come to free download the demos which contain the different three versions of the ChromeOS-Administrator training guide. And you will find every version is charming. Follow your heart and choose what you like best on our website.
