Some resources out there may even do more harm than good by leading you astray. Our ISACA CISM Exam Dumps are available with a free demo and up to 1 year of free updates.

ISACA Certified Information Security Manager Sample Questions (Q251-Q256):

NEW QUESTION # 251

What should an information security manager do FIRST when a service provider that stores the organization's confidential customer data experiences a breach in its data center?

- A. Apply remediation actions to counteract the breach.
- B. Engage an audit of the provider's data center.
- C. Recommend canceling the outsourcing contract.
- D. Determine the impact of the breach.

Answer: D

NEW QUESTION # 252

To ensure that a new application complies with information security policy, the BEST approach is to:

- A. periodically audit the security of the application.
- **B. perform a vulnerability analysis.**
- C. review the security of the application before implementation.
- D. integrate functionality the development stage.

Answer: B

Explanation:

Explanation

Performing a vulnerability analysis is the best option to ensure that a new application complies with information security policy because it helps to identify and evaluate any security flaws or weaknesses in the application that may expose it to potential threats or attacks, and provide recommendations or solutions to mitigate them. Reviewing the security of the application before implementation is not a good option because it may not detect or prevent all security issues that may arise after implementation or deployment.

Integrating security functionality at the development stage is not a good option because it may not account for all security requirements or challenges of the application or its environment. Periodically auditing the security of the application is not a good option because it may not address any security issues that may occur between audits or after deployment. References:

NEW QUESTION # 253

Before approving the implementation of a new security solution, senior management requires a business case. Which of the following would BEST support the justification for investment?

- **A. The solution contributes to business strategy.**
- B. The solution improves business resiliency.
- C. The solution reduces the cost of noncompliance with regulations.
- D. The solution improves business risk tolerance levels.

Answer: A

Explanation:

The best way to support the justification for investment in a new security solution is to show how the solution contributes to the business strategy of the organization. The business strategy defines the vision, mission, goals, and objectives of the organization, and the security solution should align with and support them. The security solution should also demonstrate how it adds value to the organization, such as by enabling new business opportunities, enhancing customer satisfaction, or increasing competitive advantage. The business case should include the expected benefits, costs, risks, and alternatives of the security solution, and provide a clear rationale for choosing the preferred option1.

NEW QUESTION # 254

The IT function has declared that, when putting a new application into production, it is not necessary to update the business impact analysis (BIA) because it does not produce modifications in the business processes. The information security manager should:

- A. request an audit review.
- B. check the system's risk analysis.
- C. recommend update after post implementation review.
- **D. verify the decision with the business units.**

Answer: D

Explanation:

Explanation

Verifying the decision with the business units is the correct answer because it is not the IT function's responsibility to decide whether a new application modifies business processes Choice B does not consider the change in the applications. Choices C and D delay

the update.

NEW QUESTION # 255

Emergency actions are taken at the early stage of a disaster with the purpose of preventing injuries or loss of life and:

- A. reducing the extent of operational damage.
- B. determining the extent of property damage.
- C. preserving environmental conditions.
- D. ensuring orderly plan activation.

Answer: A

Explanation:

During an incident, emergency actions should minimize or eliminate casualties and damage to the business operation, thus reducing business interruptions. Determining the extent of property damage is not the consideration; emergency actions should minimize, not determine, the extent of the damage. Protecting/preserving environmental conditions may not be relevant. Ensuring orderly plan activation is important but not as critical as reducing damage to the operation.

NEW QUESTION # 256

Success in the ISACA CISM certification exam gives a huge boost to your career in the sector. You polish and validate your capabilities with the ISACA CISM. However, certification test demands a thorough knowledge of ISACA CISM Exam domains from credible preparation material, and this is the part where test takers lose hope.
