Valid Confluent CCAAK Exam Sample & Exam CCAAK Details

If you want to get a desirable opposition and then achieve your career dream, you are a right place now. Our CCAAK Study Tool can help you pass the exam. So, don't be hesitate, choose the CCAAK test torrent and believe in us. Let's strive to our dreams together. Life is short for us, so we all should cherish our life. The CCAAK test torrent can let users in a short time, accurately grasp the proposition trend of each year, doing all effects in the process of the difficulties in the hot, user's weak link and targeted training, and exercise the user's solving problem ability, eventually achieve the objectives of the pass Confluent Certified Administrator for Apache Kafka qualification test.

Confluent CCAAK Exam Syllabus Topics:

Topic	Details
Topic 1	• Kafka Connect: This section of the exam measures skills of a Site Reliability Engineer and addresses the use and management of Kafka Connect for data integration. It includes setting up connectors, managing configurations, and ensuring efficient movement of data between Kafka and external systems.
Topic 2	• Deployment Architecture: This section of the exam measures skills of a Kafka Administrator and covers different Kafka deployment topologies. It evaluates understanding of high availability, disaster recovery, multi-data center replication, and the roles of Zookeeper or KRaft in the cluster architecture.
Topic 3	• Troubleshooting: This section of the exam measures skills of a Kafka Administrator and includes diagnosing common issues in Kafka clusters. It covers problem areas such as performance bottlenecks, message delivery failures, replication issues, and consumer lag, along with techniques to resolve them effectively.
Topic 4	• Apache Kafka® Cluster Configuration: This section of the exam measures skills of a Kafka Administrator and includes configuring broker properties, tuning for performance, managing topic-level settings, and applying best practices for production-grade environments.

Topic 5	• Apache Kafka® Fundamentals: This section of the exam measures skills of a Kafka Administrator and covers core concepts such as Kafka architecture, components, and data flow. It assesses the candidate's understanding of topics like topics and partitions, brokers, producers, consumers, and message retention.

Free PDF 2025 Valid Confluent Valid CCAAK Exam Sample

Not every company can make such a promise of "no help, full refund" as our Lead2Passed. However, the CCAAK exam is not easy to pass, but our Lead2Passed have confidence with their team. Our Lead2Passed's study of CCAAK exam make our CCAAK Exam software effectively guaranteed. You can download our free demo first to try out, no matter which stage you are now in your exam review, our products can help you better prepare for CCAAK exam.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q46-Q51):

NEW QUESTION # 46
A company has an existing Kafka cluster running without SSL/TLS enabled. The customer wants to enable SSL on brokers to secure data in transit, but they would like to give applications connecting to this cluster some time to migrate to using SSL connection instead of putting a hard stop.
Which solution will meet the customer's requirements?

- A. Modify the advertised listeners setting on brokers to use SSL.
- B. Create a new listener with SSL enabled.
- C. Enable SSL on the current Listener, and do not enable mTLS.
- D. Enable SSL on the current listener, and do not implement SSL on application side.

Answer: B

Explanation:
Kafka supports multiple listeners, allowing you to run PLAINTEXT and SSL simultaneously. By creating a new SSL-enabled listener (e.g., on a different port), existing applications can continue using PLAINTEXT while gradually migrating to the SSL listener. This approach avoids downtime and gives clients time to adapt without enforcing a hard cutover.

NEW QUESTION # 47
What is the relationship between topics and partitions? (Choose two.)

- A. There is no relationship between topics and partitions.
- B. A partition may have more than one topic.
- C. Atopic may have more than one partition.
- D. A partition is always linked to a single topic.
- E. Atopic always has one partition.

Answer: C,D

Explanation:
Kafka topics are split into one or more partitions to enable parallelism and scalability.
Each partition belongs to exactly one topic; it cannot span multiple topics.

NEW QUESTION # 48
A Kafka administrator notices that their consumers of Topic X are starting to fall behind. The administrator sees that Topic X has four partitions, and the consumer group has two consumers.
Which change can increase the performance of the Consumer Group?

- A. Create a new consumer group for Topic X containing two (2) consumers.

- B. Decrease the consumer acknowledgment property to increase throughput.
- C. Increase the partitions in Topic X.
- D. Increase the number of consumers in the consumer group.

Answer: D

Explanation:
With 4 partitions and only 2 consumers, some consumers are handling multiple partitions, which may cause lag if processing is slow. By increasing the number of consumers in the group (up to 4), Kafka can assign one partition per consumer, improving parallelism and throughput.

NEW QUESTION # 49
You have a Kafka cluster with topics t1 and t2. In the output below, topic t2 shows Partition 1 with a leader "-1".
What is the most likely reason for this?
...
$ kafka-topics --zookeeper localhost:2181 --describe --topic t1
Topic:t1 PartitionCount 1 ReplicationFactor 1 Configs:
Topic: t1 Partition: 0 Leader: 0 Replicas: 0 Isr: 0
$ kafka-topics --zookeeper localhost:2181 --describe --topic t2
Topic:t2 PartitionCount 2 ReplicationFactor 1 Configs:
Topic: t2 Partition: 0 Leader: 0 Replicas: 0 Isr: 0
Topic: t2 Partition: 1 Leader: -1 Replicas: 1 Isr:

- A. Compression has been enabled on Broker 1.
- B. Broker 1 has another partition clashing with the same name.
- C. Broker 1 failed.
- D. Leader shows "-1" while the log cleaner thread runs on Broker 1.

Answer: C

Explanation:
A Leader of -1 indicates that no broker is currently the leader for that partition. This usually happens when the only replica for that partition is unavailable, often due to the associated broker (in this case, Broker 1) failing or being offline. Kafka cannot elect a leader if no replica is in the in-sync replica (ISR) list, which leads to leader = -1.

NEW QUESTION # 50
Which valid security protocols are included for broker listeners? (Choose three.)

- A. SSL
- B. SASL_SSL
- C. PLAINTEXT
- D. SASL
- E. GSSAPI

Answer: A,B,C

NEW QUESTION # 51
