

Valid Dumps DP-700 Free | Valid Study DP-700 Questions

BONUS!!! Download part of TorrentVCE DP-700 dumps for free: https://drive.google.com/open?id=1kIthdDBRwJYp7JaPl53pbME9O_-AntJC

TorrentVCE DP-700 practice test has real DP-700 exam questions. You can change the difficulty of these questions, which will help you determine what areas appertain to more study before taking your Implementing Data Engineering Solutions Using Microsoft Fabric (DP-700) exam dumps. Here we listed some of the most important benefits you can get from using our Implementing Data Engineering Solutions Using Microsoft Fabric (DP-700) practice questions.

Our DP-700 exam guide are not only rich and varied in test questions, but also of high quality. A very high hit rate gives you a good chance of passing the final DP-700 exam. According to past statistics, 98 % - 99 % of the users who have used our DP-700 Study Materials can pass the exam successfully. So without doubt, you will be our nest passer as well as long as you buy our DP-700practice braindumps.

DP-700 test dumps, Microsoft DP-700 VCE engine, DP-700 actual exam

It is well known that obtaining such a DP-700 certificate is very difficult for most people, especially for those who always think that their time is not enough to learn efficiently. With our DP-700 test prep, you don't have to worry about the complexity and tediousness of the operation. As long as you enter the learning interface of our soft test engine of DP-700 Quiz guide and start practicing on our Windows software, you will find that there are many small buttons that are designed to better assist you in your learning.

Microsoft DP-700 Exam Syllabus Topics:

Topic	Details

Topic 1	• Ingest and transform data: This section of the exam measures the skills of Data Engineers that cover designing and implementing data loading patterns. It emphasizes preparing data for loading into dimensional models, handling batch and streaming data ingestion, and transforming data using various methods. A skill to be measured is applying appropriate transformation techniques to ensure data quality.
Topic 2	• Monitor and optimize an analytics solution: This section of the exam measures the skills of Data Analysts in monitoring various components of analytics solutions in Microsoft Fabric. It focuses on tracking data ingestion, transformation processes, and semantic model refreshes while configuring alerts for error resolution. One skill to be measured is identifying performance bottlenecks in analytics workflows.
Topic 3	• Implement and manage an analytics solution: This section of the exam measures the skills of Microsoft Data Analysts regarding configuring various workspace settings in Microsoft Fabric. It focuses on setting up Microsoft Fabric workspaces, including Spark and domain workspace configurations, as well as implementing lifecycle management and version control. One skill to be measured is creating deployment pipelines for analytics solutions.

Microsoft Implementing Data Engineering Solutions Using Microsoft Fabric Sample Questions (Q26-Q31):

NEW QUESTION # 26

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Fabric eventstream that loads data into a table named Bike_Location in a KQL database. The table contains the following columns:

BikepointID

Street

Neighbourhood

No_Bikes

No_Empty_Docks

Timestamp

You need to apply transformation and filter logic to prepare the data for consumption. The solution must return data for a neighbourhood named Sands End when No_Bikes is at least 15. The results must be ordered by No_Bikes in ascending order.

Solution: You use the following code segment:

```
bike_location
| filter Neighbourhood == "Sands End" and No_Bikes >= 15
| order by No_Bikes
| project BikepointID, Street, Neighbourhood, No_Bikes, No_Empty_Docks, Timestamp
```

Does this meet the goal?

- A. Yes
- B. no

Answer: B

Explanation:

This code does not meet the goal because it uses order by, which is not valid in KQL. The correct term in KQL is sort by.

Correct code should look like:

```
bike_location
| filter Neighbourhood == "Sands End" and No_Bikes >= 15
| sort by No_Bikes asc
| project BikepointID, Street, Neighbourhood, No_Bikes, No_Empty_Docks, Timestamp
```

NEW QUESTION # 27

You have a Fabric workspace named Workspace1 that contains a warehouse named Warehouse1.

You plan to deploy Warehouse1 to a new workspace named Workspace2.

As part of the deployment process, you need to verify whether Warehouse1 contains invalid references. The solution must minimize development effort.

What should you use?

- A. a Python script
- B. a T-SQL script
- C. a database project
- D. a deployment pipeline

Answer: A

Explanation:

A deployment pipeline in Fabric allows you to deploy assets like warehouses, datasets, and reports between different workspaces (such as from Workspace1 to Workspace2). One of the key features of a deployment pipeline is the ability to check for invalid references before deployment. This can help identify issues with assets, such as broken links or dependencies, ensuring the deployment is successful without introducing errors. This is the most efficient way to verify references and manage the deployment with minimal development effort.

NEW QUESTION # 28

You have an Azure key vault named KeyVault1 that contains secrets.

You have a Fabric workspace named Workspace1. Workspace1 contains a notebook named Notebook1 that performs the following tasks:

- * Loads stage data to the target tables in a lakehouse
- * Triggers the refresh of a semantic model

You plan to add functionality to Notebook1 that will use the Fabric API to monitor the semantic model refreshes. You need to retrieve the registered application ID and secret from KeyVault1 to generate the authentication token.

Solution: You use the following code segment:

Use notebookutils.credentials.getSecret and specify the key vault URL and key vault secret. Does this meet the goal?

- A. Yes
- B. No

Answer: A

NEW QUESTION # 29

You have a Fabric workspace that contains a lakehouse and a semantic model named Model1.

You use a notebook named Notebook1 to ingest and transform data from an external data source.

You need to execute Notebook1 as part of a data pipeline named Pipeline1. The process must meet the following requirements:

- * Run daily at 07:00 AM UTC.
- * Attempt to retry Notebook1 twice if the notebook fails.
- * After Notebook1 executes successfully, refresh Model1.

Which three actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. Place the Semantic model refresh activity after the Notebook activity and link the activities by using an On completion condition.
- B. Set the Retry setting of the Notebook activity to 2.
- C. Set the Retry setting of the Semantic model refresh activity to 2.
- D. Place the Semantic model refresh activity after the Notebook activity and link the activities by using the On success condition.
- E. From the Schedule settings of Notebook1, set the time zone to UTC.
- F. From the Schedule settings of Pipeline1, set the time zone to UTC.

Answer: B,D,F

You plan to integrate Workspace1 with Azure DevOps.

workspaces as part of a medallion architecture. You will run `deployPipeline1` by using an API call from an Azure DevOps pipeline.

Which type of authentication should you use?

When integrating Azure DevOps with Fabric (Workspace1), using a service principal is the recommended authentication method. A service principal provides a way for applications (such as an Azure DevOps pipeline) to authenticate and interact with resources securely. It allows Azure DevOps to authenticate API calls to Fabric without requiring direct user credentials. This method is ideal for automating tasks such as deploying items through a Fabric deployment pipeline.
