Esri EAEP2201 Valid Test Questions, EAEP2201 Test Review

How to find a valid exam dumps providers which can elaborate on how to prepare you properly with more appropriate questions to pass EAEP2201 exams? Yes, here is your chance to know us. Our products are just suitable for you. Our EAEP2201 exam training dumps will help you master the real test and prepare well for your exam. If you worry about your exam, our EAEP2201 Exam Training dumps will guide you and make you well preparing, you will pass exam without any doubt.

Esri EAEP2201 (Enterprise Administration Professional 2201) Certification Exam is designed for professionals who have experience in administering enterprise GIS solutions using Esri software. Enterprise Administration Professional 2201 certification exam is ideal for individuals who work in the fields of GIS, IT, or software development and are looking to consolidate their knowledge and expertise in enterprise GIS administration. EAEP2201 exam covers a range of topics, including server deployment, database administration, security, and performance tuning.

Becoming Esri EAEP2201 Certified demonstrates a high level of expertise in enterprise GIS administration and can help professionals advance in their careers. It also provides a valuable credential for organizations that use Esri's enterprise GIS products, as it ensures that their GIS administrators have the necessary skills and knowledge to maintain a high-performing and secure GIS system.

Esri Enterprise Administration Professional 2201 Sample Questions (Q50-Q55):

NEW QUESTION # 50

Some members of an ArcGIS Enterprise organization are unable to create web maps and web scenes. The users are only responsible for creating stories with ArcGIS StoryMaps.

What should the GIS administrator do to prevent confusion about non-accessible functionality to those users?

- A. Configure Page visibility settings to remove web maps and web scenes from the navigation bar
- B. Configure a maintenance notification to explain the access limitation in Portal for ArcGIS
- C. Configure the ArcGIS Enterprise home page to show only items that are accessible to the signed-in user

Answer: C

Explanation:

To prevent confusion among users who do not have access to certain functionalities, such as creating web maps and web scenes, the GIS administrator should configure the ArcGIS Enterprise home page to display only the items and tools that are accessible to the signed-in user. This customization ensures that users see a tailored interface that aligns with their permissions and responsibilities, reducing the likelihood of encountering inaccessible options.

Configuring a maintenance notification (Option A) is more appropriate for temporary service outages or updates, not for managing user interface elements. Adjusting Page visibility settings (Option B) affects the visibility of entire pages but does not provide the granular control needed to tailor the home page based on user roles and permissions.

Reference Source: ArcGIS Enterprise documentation on customizing the home page and user experience

NEW QUESTION # 51

An organization buys an additional 25 licenses for ArcGIS Pro and needs to assign the licenses to ArcGIS Enterprise users.

Which license file is required to make those assignments?

- A. Any existing license file used previously
- B. An updated license file with only the 25 additional ArcGIS Pro licenses
- C. New license file with just the 25 ArcGIS Pro licenses
- D. An updated license file with 25 additional ArcGIS Pro licenses

Answer: D

Explanation:

When an organization purchases additional licenses (e.g., ArcGIS Pro), a new combined license file must be generated that includes both the existing entitlements and the newly purchased ones. This updated license file reflects the total number of licenses (original + new).

From the ArcGIS Enterprise Licensing documentation:

"When downloading a new license file from My Esri to assign additional licenses, the license file must reflect the complete set of user types and extensions required. You must generate a new license file that includes both the existing and new entitlements."

* Option A is incorrect because a license file with only the new licenses would overwrite the previous file.

* Option B is incorrect for the same reason - partial license files are not valid for merging with existing licenses.

* Option D does not accommodate the new licenses.

NEW QUESTION # 52

An organization has a requirement to geocode crime incidents from a CSV uploaded to the ArcGIS Enterprise portal. How should the organization configure their ArcGIS Server site to meet this requirement?

- A. As an ArcGIS GeoEvent Server
- B. As the hosting server
- C. With a registered geodatabase

Answer: B

Explanation:

To enable geocoding of addresses from CSV files uploaded to the ArcGIS Enterprise portal, the organization must designate a federated ArcGIS Server site as the hosting server. This hosting server must have a relational data store configured. Once set up, the portal can utilize a geocode utility service to process the addresses. This configuration allows users to map addresses from CSV files added to the portal.

Reference Source: ArcGIS Enterprise documentation on configuring the portal to geocode addresses

NEW QUESTION # 53

An ArcGIS Enterprise deployment is expanding one of its ArcGIS Server sites from one to three machines because some services now require additional resources. Half the services use a shared instance, and the other half includes dedicated instances. What will happen to the minimum number of ArcSOCs running on the site?

- A. One and a half times as many ArcSOCs will be running
- **B. Three times as many ArcSOCs will be running**
- C. The same number of ArcSOCs will be running

Answer: B

Explanation:

When expanding an ArcGIS Server site from one to three machines, the number of ArcSOC processes (service instances) will increase proportionally. For dedicated instances, each service's minimum and maximum instances are configured per machine, so tripling the number of machines will triple the number of dedicated ArcSOCs. For shared instances, the shared instance pool runs on each machine, and the number of shared instances is configured per machine. Therefore, the total number of ArcSOCs (both dedicated and shared) will be approximately three times greater after the expansion

NEW QUESTION # 54

An ArcGIS analyst is curating a series of basemaps for field crews editing utility infrastructure in the field. The analyst must ensure optimal performance. Which type of service should be published?

- A. Cached map service
- **B. Vector tile service**
- C. Dynamic map service

Answer: B

Explanation:

For field operations, Vector Tile Services are highly efficient and suitable for basemaps. They offer fast rendering, smaller file sizes, and are easily scalable across various devices, including those with limited bandwidth or processing capabilities. Vector tiles also support dynamic styling and are ideal for offline use, which is often necessary for field crews working in areas with limited connectivity.

Cached map services (Option A) are raster-based and can be larger in size, making them less optimal for mobile use. Dynamic map services (Option C) require real-time data rendering, which can be resource-intensive and may not perform well in field conditions with limited connectivity.

Reference Source: ArcGIS Enterprise documentation on customizing basemaps
