

# Valid Exam Analytics-Arch-201 Preparation, Analytics-Arch-201 Brain Dumps

As one of the leading brand in the market, our Analytics-Arch-201 practice materials can be obtained on our website within five minutes. That is the expression of their efficiency. Their amazing quality can totally catch eyes of exam candidates with passing rate up to 98 to 100 percent. We have free demos for your information and the demos offer details of real exam contents. All contents of Analytics-Arch-201 practice materials contain what need to be mastered.

According to various predispositions of exam candidates, we made three versions of our Analytics-Arch-201 study materials for your reference: the PDF, Software and APP online. And the content of them is the same though the displays are different. Untenable materials may waste your time and energy during preparation process. But our Analytics-Arch-201 Practice Braintumps are the leader in the market for ten years. As long as you try our Analytics-Arch-201 exam questions, we believe you will fall in love with it.

## Analytics-Arch-201 Brain Dumps, Latest Analytics-Arch-201 Test Dumps

Salesforce Analytics-Arch-201 practice test software is compatible with windows and the web-based software will work on these operating systems: Android, IOS, Windows, and Linux. Chrome, Opera, Internet Explorer, Microsoft Edge, and Firefox also support the web-based Analytics-Arch-201 Practice Test software.

### Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
-------	---------

Topic 1	<ul style="list-style-type: none"> <li>Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.</li> </ul>

## Salesforce Certified Tableau Architect Sample Questions (Q195-Q200):

### NEW QUESTION # 195

A global financial institution requires a Tableau deployment that ensures continuous operation and data protection. What should be the primary focus in their high availability and disaster recovery planning?

- A. Rely solely on regular data backups without additional infrastructure considerations
- B. Use a cloud-based Tableau service without any on-premises disaster recovery plans
- C. Establish a multi-node Tableau Server cluster with load balancing and failover capabilities**
- D. Implement a single Tableau Server node to simplify management

### Answer: C

#### Explanation:

Establish a multi-node Tableau Server cluster with load balancing and failover capabilities. This approach ensures high availability and robust disaster recovery by distributing the load across multiple nodes and providing failover capabilities in case of a node failure, which is critical for a financial institution's continuous operation. Option A is incorrect because a single node does not provide high availability or disaster recovery capabilities. Option C is incorrect as regular data backups are important but not sufficient for high availability and immediate failover needs. Option D is incorrect because relying solely on a cloud-based service without on-premises disaster recovery plans may not meet the specific compliance and control requirements of a global financial institution.

### NEW QUESTION # 196

During the troubleshooting of OpenID Connect integration issues in Tableau Server, what common factor should be examined?

- A. The load balancing configuration of the Tableau Server
- B. The storage capacity on the Tableau Server for caching user tokens
- C. The encryption strength of the SSL certificate on the Tableau Server
- D. The redirection URI specified in the OpenID Connect provider and Tableau Server configuration**

### Answer: D

#### Explanation:

The redirection URI specified in the OpenID Connect provider and Tableau Server configuration A common issue in OpenID Connect integration involves the redirection URI. Ensuring that the redirection URI specified in the Tableau Server configuration matches exactly with what is registered on the OpenID Connect provider is crucial. Mismatches or incorrect configurations can lead to failed authentication and redirection errors. Option A is incorrect as load balancing configurations are generally not directly related to OpenID Connect integration issues. Option C is incorrect because while SSL certificate strength is important for overall security, it is not typically the cause of OpenID Connect specific integration issues. Option D is incorrect as the storage capacity for caching user tokens is unlikely to be a significant factor in the troubleshooting of OpenID Connect integration.

#### NEW QUESTION # 197

When integrating Tableau content into a custom web application using connected apps, what is a key step in configuring this integration securely?

- A. Allowing the connected app to access Tableau Server content without any restrictions for ease of integration
- B. Requiring manual authentication for each user session in the web application to access Tableau content
- C. Configuring the web application to bypass Tableau Server's security protocols for a direct connection
- D. **Setting up connected apps in Tableau Server with specific permissions and access controls for the web application**

#### Answer: D

#### Explanation:

Setting up connected apps in Tableau Server with specific permissions and access controls for the web application A key step in securely integrating Tableau content into a custom web application is to set up connected apps in Tableau Server with specific permissions and access controls. This approach ensures that the web application can securely access the necessary Tableau content while maintaining appropriate security and access restrictions. Option A is incorrect because allowing unrestricted access poses a significant security risk. Option C is incorrect as requiring manual authentication for each session can be cumbersome and may not be necessary with the proper configuration of connected apps. Option D is incorrect because bypassing Tableau Server's security protocols would undermine the security and integrity of the data and content.

#### NEW QUESTION # 198

In developing a load testing strategy for Tableau Server, what aspect is important to include to ensure comprehensive testing?

- A. **Simulating a variety of user activities, such as viewing dashboards, publishing workbooks, and refreshing extracts**
- B. Testing the server with a single, high-usage dashboard to see its performance under stress
- C. Running the tests only with administrative users to evaluate the server's response to privileged activities
- D. Exclusively testing the data source connection speeds to determine the overall server performance

#### Answer: A

#### Explanation:

Simulating a variety of user activities, such as viewing dashboards, publishing workbooks, and refreshing extracts A comprehensive load testing strategy for Tableau Server should include simulating a variety of user activities. This includes tasks like viewing dashboards, publishing workbooks, and refreshing extracts. This approach ensures a thorough evaluation of the server's performance across different types of demands and user interactions, providing a more realistic assessment of its capabilities and limitations. Option A is incorrect because testing with only a single dashboard does not account for the varied activities users perform on the server. Option C is incorrect as focusing solely on data source connection speeds neglects other crucial aspects of server performance. Option D is incorrect because running tests only with administrative users does not replicate the typical activities of regular users, which are essential for understanding the server's performance under normal operating conditions.

#### NEW QUESTION # 199

When troubleshooting LDAP integration issues in Tableau Server, what common aspect should be checked first?

- A. The network speed and latency between Tableau Server and the LDAP server
- B. The firewall settings on the client machines trying to authenticate with Tableau Server
- C. **The correctness of the LDAP server address and port number configured in Tableau Server**
- D. The compatibility of the LDAP server's software version with Tableau Server

#### Answer: C

## Explanation:

The correctness of the LDAP server address and port number configured in Tableau Server A common and primary aspect to check when troubleshooting LDAP integration issues is the correctness of the LDAP server address and port number in the Tableau Server configuration. Incorrect server address or port configuration can lead to failed connections and authentication problems, making it a critical first step in the troubleshooting process. Option A is incorrect because while network speed and latency are important, they are not usually the first aspect to be checked in LDAP integration issues. Option B is incorrect as software version compatibility, although important, is usually validated during the initial setup and is less likely to be the cause of sudden integration issues. Option D is incorrect because firewall settings on client machines are not typically related to LDAP authentication issues on the server side.

## NEW QUESTION # 200

.....

Our team of experts updates actual Salesforce Analytics-Arch-201 questions regularly so you can prepare for the Analytics-Arch-201 exam according to the latest syllabus. Additionally, we also offer up to 1 year of free Analytics-Arch-201 exam questions updates. We have a 24/7 customer service team available for your assistance if you get stuck somewhere. Buy Analytics-Arch-201 Latest Questions of BraindumpQuiz now and get ready to crack the Analytics-Arch-201 certification exam in a single attempt.
