But if you choose CISM test prep, you will certainly not encounter similar problems. Before you buy CISM learning question, you can log in to our website to download a free trial question bank, and fully experience the convenience of PDF, APP, and PC three models of CISM learning question. During the trial period, you can fully understand our study materials' learning mode, completely eliminate any questions you have about CISM test prep, and make your purchase without any worries. At the same time, if you have any questions during the trial period, you can feel free to communicate with our staff, and we will do our best to solve all the problems for you.

ISACA Certified Information Security Manager Sample Questions (Q891-Q896):

NEW QUESTION # 891

When speaking to an organization's human resources department about information security, an information security manager should focus on the need for:

- A. periodic risk assessments.
- B. security awareness training for employees.
- C. recruitment of technical IT employees.
- D. an adequate budget for the security program.

Answer: B

Explanation:

Explanation/Reference:

Explanation:

An information security manager has to impress upon the human resources department the need for security awareness training for all employees. Budget considerations are more of an accounting function.

The human resources department would become involved once they are convinced for the need of security awareness training.

Recruiting IT-savvy staff may bring in new employees with better awareness of information security, but that is not a replacement for the training requirements of the other employees.

Periodic risk assessments may or may not involve the human resources department function.

NEW QUESTION # 892

What is the PRIMARY role of the information security manager in the process of information classification within an organization?

- A. Checking if information assets have been classified properly
- **B. Defining and ratifying the classification structure of information assets**
- C. Securing information assets in accordance with their classification
- D. Deciding the classification levels applied to the organization's information assets

Answer: B

Explanation:

Explanation

Defining and ratifying the classification structure of information assets is the primary role of the information security manager in the process of information classification within the organization. Choice B is incorrect because the final responsibility for deciding the classification levels rests with the data owners. Choice C is incorrect because the job of securing information assets is the responsibility of the data custodians. Choice D may be a role of an information security manager but is not the key role in this context.

NEW QUESTION # 893

Which of the following mechanisms is the MOST secure way to implement a secure wireless network?

- A. Web-based authentication
- B. Use a Wired Equivalent Privacy (WEP) key
- **C. Use a Wi-Fi Protected Access (WPA2) protocol**
- D. Filter media access control (MAC) addresses

Answer: C

Explanation:

WPA2 is currently one of the most secure authentication and encryption protocols for mainstream wireless products. MAC address filtering by itself is not a good security mechanism since allowed MAC addresses can be easily sniffed and then spoofed to get into the network. WEP is no longer a secure encryption mechanism for wireless communications. The WEP key can be easily broken within minutes using widely available software. And once the WEP key is obtained, all communications of every other wireless client are exposed. Finally, a web-based authentication mechanism can be used to prevent unauthorized user access to a network, but it will not solve the wireless network's main security issues, such as preventing network sniffing.

NEW QUESTION # 894

When performing a business impact analysis (BIA), who should calculate the recovery time and cost estimates?

- A. Business continuity coordinator
- B. Information security manager
- C. Senior management
- **D. Business process owner**

Answer: D

Explanation:

The business process owner is the person who is responsible for overseeing and managing the business processes and functions that are essential for the organization's operations and objectives. The business process owner has the most direct and detailed

knowledge of the inputs, outputs, dependencies, resources, and performance indicators of the business processes and functions. Therefore, the business process owner is the best person to calculate the recovery time and cost estimates when performing a business impact analysis (BIA), which is a process of identifying and quantifying the potential losses, damages, or consequences that could result from a disruption or an incident that affects the availability, integrity, or confidentiality of the information assets and systems that support the business processes and functions. The recovery time and cost estimates are the measures that indicate the time and money that are needed to resume and restore the normal business operations and functions after the disruption or incident. The recovery time and cost estimates can help to prioritize and protect the critical activities and resources, to allocate the appropriate budget and resources, to implement the necessary controls and measures, and to evaluate the effectiveness and efficiency of the business continuity and disaster recovery plans.

The business continuity coordinator, the senior management, and the information security manager are all important roles in the BIA process, but they are not the best ones to calculate the recovery time and cost estimates. The business continuity coordinator is the person who is responsible for coordinating and facilitating the BIA process, as well as the development, implementation, and maintenance of the business continuity and disaster recovery plans. The business continuity coordinator can help to define and communicate the scope, objectives, and methodology of the BIA, to collect and analyze the data and information from the business process owners and other stakeholders, to report and present the BIA results and recommendations, and to provide feedback and suggestions for improvement and optimization of the BIA and the plans. The senior management is the group of people who have the ultimate authority and accountability for the organization's strategy, direction, and performance. The senior management can help to approve and support the BIA process and the plans, to provide the strategic guidance and vision for the business continuity and disaster recovery, to allocate the necessary budget and resources, to oversee and monitor the BIA and the plans, and to make the final decisions and approvals. The information security manager is the person who is responsible for ensuring the security of the information assets and systems that support the business processes and functions. The information security manager can help to identify and assess the information security risks and issues that could affect the BIA and the plans, to implement and manage the security controls and measures that are needed to protect and recover the information assets and systems, to coordinate and collaborate with the business process owners and other stakeholders on the security aspects of the BIA and the plans, and to provide the security expertise and advice. Reference = CISM Review Manual 15th Edition, pages 228-2291; CISM Practice Quiz, question 1722

NEW QUESTION # 895

The MOST appropriate time to conduct a disaster recovery test would be after:

- A. the business continuity plan (BCP) has been updated.
- **B. major business processes have been redesigned.**
- C. noncompliance incidents have been filed.
- D. the security risk profile has been reviewed

Answer: B

NEW QUESTION # 896

.....

We understand our candidates have no time to waste, everyone wants an efficient learning. So we take this factor into consideration, develop the most efficient way for you to prepare for the CISM exam, that is the real questions and answers practice mode, firstly, it simulates the real CISM test environment perfectly, which offers greatly help to our customers. Secondly, it includes printable PDF Format of CISM Exam Questions, also the instant access to download make sure you can study anywhere and anytime. All in all, high efficiency of CISM exam material is the reason for your selection.
