How can GitHub Actions encrypted secrets be used in if: conditionals within a workflow job?

- A. Create a job dependency that exposes the encrypted secret as a job output, which can then be leveraged in a subsequent dependent job.
- B. Use the secrets context within the conditional statement, e.g. `${{ secrets.MySuperSecret }}`.
- C. Set the encrypted secret as a job-level environment variable and then reference the environment variable within the conditional statement.
- D. Use a workflow command to expose the encrypted secret via a step's output parameter and then use the step output in the job's if conditional.

NEW QUESTION # 43

What are the advantages of using a matrix strategy in a job definition? (Choose two.)

- A. It can test code in multiple operating systems.
- B. It can test code in multiple versions of a programming language.
- C. It can run up to 512 jobs per workflow run.
- D. It can decrease the costs for running multiple combinations of programming language/operating systems.

Answer: A,B

Explanation:

A matrix strategy allows you to define different versions of a programming language (or any other environment setting) and run tests on each version simultaneously. This is particularly useful for testing code compatibility across different versions of a language.

A matrix strategy can also be used to test code on multiple operating systems (e.g., Windows, macOS, Linux) by defining these operating systems as matrix variables. This enables cross-platform testing within the same workflow.
