Valid Exam JN0-105 Blueprint, JN0-105 Exam Simulator Online

P.S. Free & New JN0-105 dumps are available on Google Drive shared by Exam4Tests: https://drive.google.com/open?id=1kk_6-3-mGPhamtoYUAdYGZIHG3nPKABg

As one of the leading brand in the market, our JN0-105 exam materials can be obtained on our website within five minutes. As long as you pay for our JN0-105 study guide successfully, then you will receive it quickly. That is the expression of our efficiency. The amazing quality of our JN0-105 learning questions can totally catch eyes of exam candidates with passing rate up to 98 to 100 percent.

Our company employs the first-rate expert team which is superior to others both at home and abroad. Our experts team includes the experts who develop and research the JN0-105 study materials for many years and enjoy the great fame among the industry, the senior lecturers who boost plenty of experiences in the information about the exam and published authors who have done a deep research of the JN0-105 Study Materials and whose articles are highly authorized. They provide strong backing to the compiling of the JN0-105 study materials and reliable exam materials resources. They compile each answer and question carefully.

JN0-105 Exam Simulator Online, Test JN0-105 Questions

If you want to sail through the difficult Juniper JN0-105 Exam, it would never do to give up using exam-related materials when you prepare for your exam. If you would like to find the best certification training dumps that suit you, Exam4Tests is the best place to go. Exam4Tests is a well known and has many excellent exam dumps that relate to IT certification test. Moreover all exam dumps give free demo download. If you want to know whether Exam4Tests practice test dumps suit you, you can download free demo to

experience it in advance.

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	• User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.
Topic 2	• Routing Fundamentals: This topic discusses pointing out basic routing concepts or functionality for Junos devices. Moreover, the topic also describes configuring or monitoring basic routing elements for a Junos device.
Topic 3	• Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device
Topic 4	• Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q32-Q37):

NEW QUESTION # 32
What will the request system configuration rescue save command do?

- A. It saves the candidate configuration as the rescue configuration.
- B. It activates the rescue configuration.
- C. It saves a configuration version prior to the configuration most recently committed as the rescue configuration.
- D. It saves the most recently committed configuration as the rescue configuration.

Answer: D

Explanation:
The request system configuration rescue save command in Junos OS saves the most recently committed configuration as the rescue configuration. This rescue configuration can be used to recover the device if future configurations cause issues. It ensures there is a stable, known-good configuration to fall back on, which is crucial in network management and troubleshooting.
Reference:
"rescue : save configurations as the rescue: request system configuration save .....(saves the current configs as a rescue configs)" from Useful Juniper Commands.txt.
Juniper official documentation: Configuring and Activating a Rescue Configuration.

NEW QUESTION # 33
What is the protocol data unit (PDU) of the Data Link Layer?

- A. frame
- B. byte
- C. bit
- D. segment

Answer: A

Explanation:
In the OSI model, the Data Link Layer is responsible for node-to-node delivery of data. It frames the packets received from the Network Layer and prepares them for physical transmission. The Protocol Data Unit (PDU) for the Data Link Layer is called a "frame." Frames encapsulate the network layer packets, adding a header and a trailer that include the hardware addresses of the source and destination, among other things, facilitating the data link layer services like frame synchronization, flow control, and error checking.

NEW QUESTION # 34
When considering routing policies, which two statements are correct? (Choose two.)

- A. Policy terms are evaluated from top to bottom with action taken on the first match found.
- B. An import routing policy for BGP determines which received prefix advertisements are placed in the routing information base.
- C. Policy terms are evaluated from top to bottom with the most restrictive action taken of all the matching terms.
- D. Routing policies are applied to interfaces as input or export filters.

Answer: A,B

Explanation:
Routing policies in Junos OS are crucial for controlling route advertisements and path selection. The correct answers are B and C. An import routing policy for BGP determines which received prefix advertisements are placed in the routing information base (RIB), and policy terms are evaluated from top to bottom, with action taken on the first match found. This sequential evaluation allows for precise control over routing decisions.

NEW QUESTION # 35
Which two statements about firewall filters are correct? (Choose two.)

- A. Firewall filters can match Layer 4 parameters.
- B. Firewall filters can match Layer 7 parameters.
- C. Firewall filters are stateful.
- D. Firewall filters are stateless.

Answer: A,D

Explanation:
Firewall filters in Junos OS are stateless, meaning they process each packet individually without regard to the state of a connection or sequence of packets. These filters can match various packet attributes, including those at Layer 4, such as TCP and UDP port numbers. This allows for granular control over traffic based on the type of service or application. Unlike stateless filters, stateful firewalls keep track of the state of active connections and make decisions based on the context of the traffic flow, which is not a capability of Junos firewall filters. Additionally, Junos firewall filters primarily operate up to Layer 4 and do not natively inspect Layer 7 parameters, which involve application-level data.

NEW QUESTION # 36
What are two types of transit traffic that traverse the forwarding plane of a Layer 3 router? (Choose two.)

- A. multicast traffic
- B. unicast traffic
- C. broadcast traffic
- D. exception traffic

Answer: A,B

Explanation:
Transit traffic that traverses the forwarding plane of a Layer 3 router includes both unicast and multicast traffic types. Unicast traffic is directed from a single source to a single destination, while multicast traffic is sent from one source to multiple destinations that are part of a multicast group. These types of traffic are efficiently routed through the network by leveraging the router's forwarding plane capabilities. Exception traffic, which requires special handling by the control plane, and broadcast traffic, which is typically limited to a single broadcast domain and not usually forwarded by Layer 3 routers, are not considered standard types of transit traffic for the forwarding plane of a router.

NEW QUESTION # 37
.....

The advent of our Juniper JN0-105 study guide with three versions has helped more than 98 percent of exam candidates get the certificate successfully. Rather than insulating from the requirements of the Juniper JN0-105 Real Exam, our Juniper JN0-105

practice materials closely co-related with it. And their degree of customer's satisfaction is escalating.
