and knowledge to manage and maintain server environments, making them a valuable asset to any organization. Additionally, the certification is globally recognized, which means that IT professionals can work in different countries and industries with this certification.

CompTIA Server+ Certification Exam Sample Questions (Q414-Q419):

NEW QUESTION # 414
A server administrator is swapping out the GPU card inside a server. Which of the following actions should the administrator take FIRST?

- A. Shut down the server.
- B. Inspect the GPU that is being installed.
- C. Ensure the GPU meets HCL guidelines.
- D. Disconnect the power from the rack.

Answer: A

Explanation:
The first action that the administrator should take before swapping out the GPU card inside a server is to shut down the server. This is to ensure that the server is not running any processes that might be using the GPU card, and to prevent any damage to the hardware or data loss due to sudden power loss. Shutting down the server also reduces the risk of electrostatic discharge (ESD) that might harm the components. Reference:

NEW QUESTION # 415
A server administrator is installing an OS on a new server. Company policy states no one is to log in directly to the server. Which of the following Installation methods is BEST suited to meet the company policy?

- A. Clone
- B. GUI
- C. Core
- D. Virtualized

Answer: C

Explanation:
A core installation is a type of installation method that is best suited to meet the company policy that states no one is to log in directly to the server. A core installation is a minimal installation option that is available when deploying some editions of Windows Server. A core installation includes most but not all server roles and features, but does not include a graphical user interface (GUI). A core installation can only be managed remotely using command-line tools such as PowerShell or Windows Admin Center, or using graphical tools such as Server Manager or Remote Desktop from another computer. This reduces the attack surface, resource consumption, and maintenance requirements of the server. A GUI installation is a type of installation method that includes a graphical user interface (GUI) and allows local or remote management using graphical tools or command-line tools. A virtualized installation is a type of installation method that involves creating and running one or more virtual machines on a physical host using a hypervisor such as Hyper-V or VMware. A clone installation is a type of installation method that involves creating an exact copy of an existing server's configuration and data on another server using tools such as Sysprep or Clonezilla. NEW QUESTION # 416
A server administrator has noticed that the storage utilization on a file server is growing faster than planned. The administrator wants to ensure that, in the future, there is a more direct relationship between the number of users using the server and the amount of space that might be used. Which of the following would BEST enable this correlation?

- A. Disk quotas
- B. Deduplication
- C. Compression
- D. Partitioning

Answer: A

NEW QUESTION # 417

Which of me following BEST describes a disaster recovery site with a target storage array that receives replication traffic and servers that are only powered on In the event of a disaster?

- A. Cloud
- B. Cold
- C. Hot
- D. Warm

Answer: C

NEW QUESTION # 418

Hackers recently targeted a company with an attack that resulted in a system breach, which compromised the organization's dat a. Because of the system breach, the administrator had to bypass normal change management procedures. Which of the following change management activities was necessary?

- A. User permission change request
- B. Privilege change request
- C. Change request postponement
- D. Cancelled change request
- E. Emergency change request

Answer: E

Explanation:
An emergency change request is a type of change management activity that is used to address urgent issues that pose a significant risk to the organization, such as a system breach. An emergency change request requires immediate action and approval, and it may bypass some of the normal change management procedures, such as testing, documentation, or stakeholder communication12.
