Reliable Fortinet FCP_FGT_AD-7.4 Braindumps Ebook | FCP_FGT_AD-7.4 Actual Questions

The FCP - FortiGate 7.4 Administrator (FCP_FGT_AD-7.4) certification exam is one of the top-rated and career-oriented

certificates that are designed to validate an Fortinet professional's skills and knowledge level. These FCP - FortiGate 7.4 Administrator (FCP_FGT_AD-7.4) practice questions have been inspiring those who want to prove their expertise with the industrial-recognized credential. By cracking it you can gain several personal and professional benefits.

Fortinet FCP - FortiGate 7.4 Administrator Sample Questions (Q71-Q76):

NEW QUESTION # 71
Refer to the exhibit.
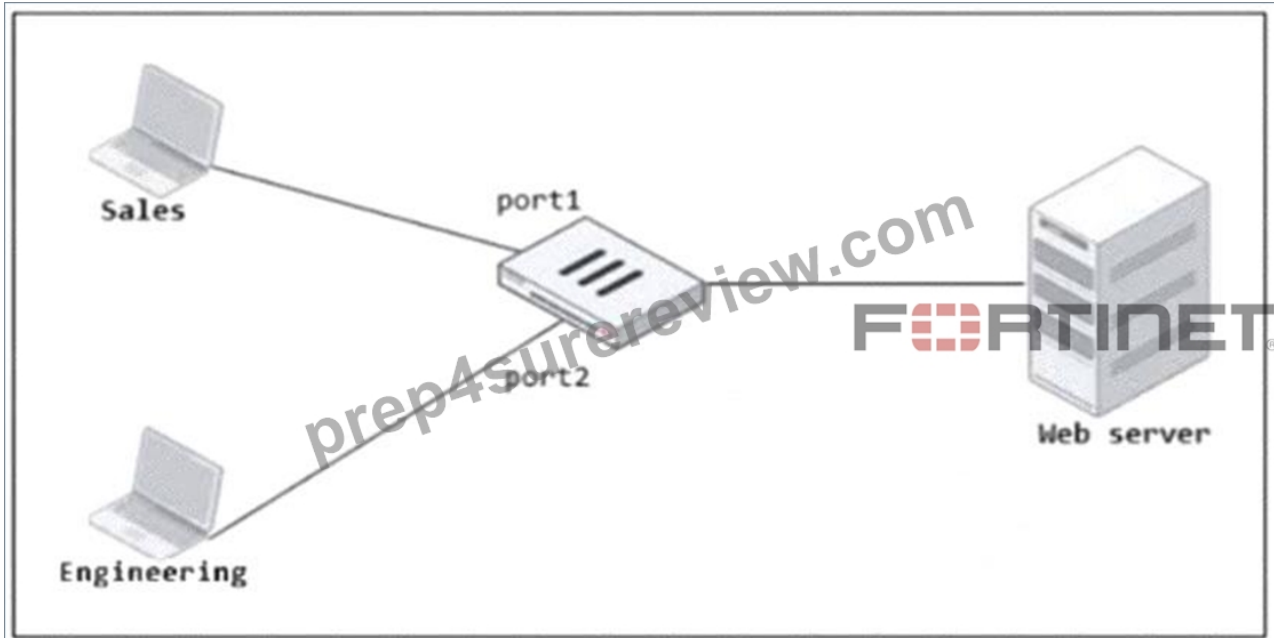

FortiGate has two separate firewall policies for Sales and Engineering to access the same web server with the same security profiles. Which action must the administrator perform to consolidate the two policies into one?

- A. Replace port1 and port2 with the any interface in a single firewall policy.
- B. Select port1 and port2 subnets in a single firewall policy.
- C. Enable Multiple Interface Policies to select port1 and port2 in the same firewall policy
- D. Create an Interface Group that includes port1 and port2 to create a single firewall policy

Answer: C

NEW QUESTION # 72
Which three pieces of information does FortiGate use to identify the hostname of the SSL server when SSL certificate inspection is enabled? (Choose three.)

- A. The serial number in the server certificate.
- B. The subject alternative name (SAN) field in the server certificate.
- C. The subject field in the server certificate.
- D. The host field in the HTTP header.
- E. The server name indication (SNI) extension in the client hello message.

Answer: B,C,E

Explanation:
When SSL certificate inspection is enabled on a FortiGate device, the system uses the following three pieces of information to identify the hostname of the SSL server:
Server Name Indication (SNI) extension in the client hello message (B): The SNI is an extension in the client hello message of the SSL/TLS protocol. It indicates the hostname the client is attempting to connect to. This allows FortiGate to identify the server's hostname during the SSL handshake.
Subject Alternative Name (SAN) field in the server certificate (C): The SAN field in the server certificate lists additional hostnames or IP addresses that the certificate is valid for. FortiGate inspects this field to confirm the identity of the server.
Subject field in the server certificate (D): The Subject field contains the primary hostname or domain name for which the certificate was issued. FortiGate uses this information to match and validate the server's identity during SSL certificate inspection.

The other options are not used in SSL certificate inspection for hostname identification:

Host field in the HTTP header (A): This is part of the HTTP request, not the SSL handshake, and is not used for SSL certificate inspection.

Serial number in the server certificate (E): The serial number is used for certificate management and revocation, not for hostname identification.

FortiOS 7.4.1 Administration Guide - Configuring SSL/SSH Inspection Profile, page 1799.

NEW QUESTION # 73

Refer to the exhibits.

The exhibits show a diagram of a FortiGate device connected to the network, as well as the IP pool configuration and firewall policy objects.

The WAN (port1) interface has the IP address 10.200.1.1/24. The LAN (port3) interface has the IP address 10.0.1.254/24.
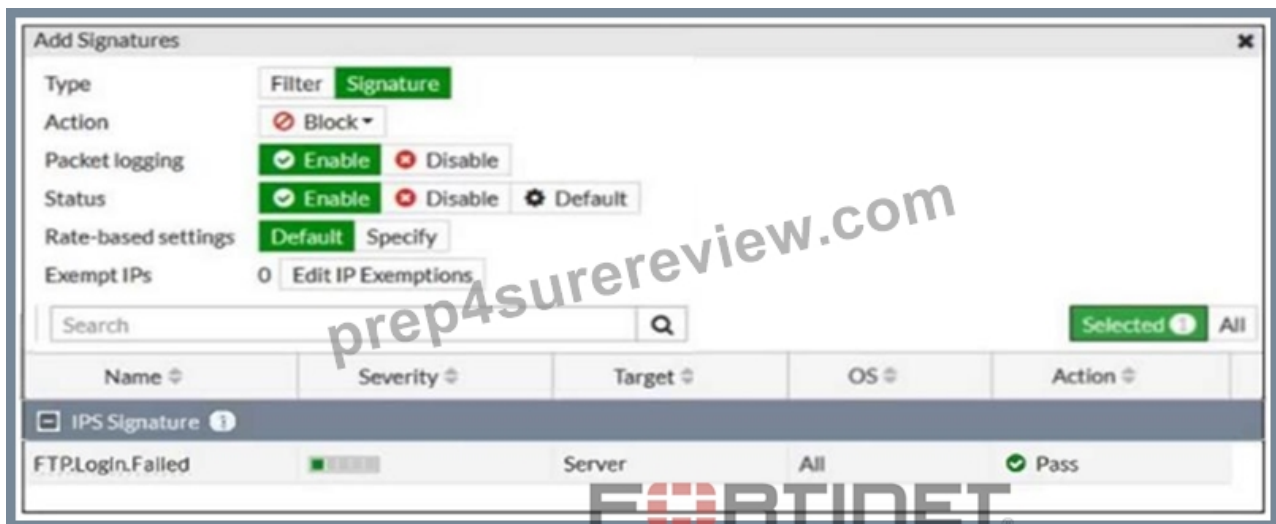

Which IP address will be used to source NAT (SNAT) the traffic, if the user on Local-Client (10.0.1.10) pings the IP address of Remote-FortiGate (10.200.3.1)?

- A. 10.200.1.99
- B. 10.200.1.49
- C. 10.200.1.1
- D. 10.200.1.149

Answer: A

NEW QUESTION # 74

Refer to the exhibit.

Review the intrusion prevention system (IPS) profile signature settings shown in the exhibit.
What do you conclude when adding the FTP.Login.Failed signature to the IPS sensor profile?

- A. The signature setting includes a group of other signatures.
- B. Traffic matching the signature will be allowed and logged.
- C. The signature setting uses a custom rating threshold.
- D. Traffic matching the signature will be silently dropped and logged.

Answer: B

Explanation:
The exhibit shows that the "FTP.Login.Failed" IPS signature is set with the action "Pass" and packet logging enabled. This means that any traffic matching this signature will be allowed through the FortiGate, and the traffic details will be logged for monitoring and analysis purposes.

NEW QUESTION # 75
A network administrator wants to set up redundant IPsec VPN tunnels on FortiGate by using two IPsec VPN tunnels and static routes.
All traffic must be routed through the primary tunnel when both tunnels are up. The secondary tunnel must be used only if the primary tunnel goes down. In addition, FortiGate should be able to detect a dead tunnel to speed up tunnel failover.
Which two key configuration changes must the administrator make on FortiGate to meet the requirements?
(Choose two.)

- A. Enable Auto-negotiate and AutokeyKeep Alive on the phase 2 configuration of both tunnels.
- B. Enable Dead Peer Detection
- C. Configure a lower distance on the static route for the primary tunnel, and a higher distance on the static route for the secondary tunnel.
- D. Configure a higher distance on the static route for the primary tunnel, and a lower distance on the static route for the secondary tunnel.

Answer: B,C

NEW QUESTION # 76
......

Once you have used our FCP_FGT_AD-7.4 exam training in a network environment, you no longer need an internet connection the next time you use it, and you can choose to use FCP_FGT_AD-7.4 exam training at your own right. Our FCP_FGT_AD-7.4 Exam Training do not limit the equipment, do not worry about the network, this will reduce you many learning obstacles, as long as you want to use FCP_FGT_AD-7.4 test guide, you can enter the learning state.
