Flexible Microsoft GH-500 Learning Mode & GH-500 Certification Questions

Exams4Collection is the only one able to provide you the best and fastest updating information about Microsoft Certification GH-500 Exam. Other websites may also provide information about Microsoft certification GH-500 exam, but if you compare with each other, you will find that Exams4Collection provide the most comprehensive and highest quality information. And most of the information of other websites comes mainly from Exams4Collection.

Microsoft GitHub Advanced Security Sample Questions (Q35-Q40):

NEW QUESTION # 35

How many alerts are created when two instances of the same secret value are in the same repository?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

When multiple instances of the same secret value appear in a repository, only one alert is generated. Secret scanning works by identifying exposed credentials and token patterns, and it groups identical matches into a single alert to reduce noise and avoid duplication.

This makes triaging easier and helps teams focus on remediating the actual exposed credential rather than reviewing multiple redundant alerts.

NEW QUESTION # 36

Which security feature shows a vulnerable dependency in a pull request?

- A. Dependabot alert
- **B. Dependency review**
- C. The repository's Security tab
- D. Dependency graph

Answer: B

Explanation:

Dependency review runs as part of a pull request and shows which dependencies are being added, removed, or changed - and highlights vulnerabilities associated with any added packages.

It works in real-time and is specifically designed for use during pull request workflows.

The dependency graph is an overview, Dependabot alerts notify post-merge, and the Security tab shows the aggregated alert list.

NEW QUESTION # 37

Assuming that no custom Dependabot behavior is configured, who has the ability to merge a pull request created via Dependabot security updates?

- **A. A user who has write access to the repository**
- B. A user who has read access to the repository
- C. A repository member of an enterprise organization
- D. An enterprise administrator

Answer: A

Explanation:

Comprehensive and Detailed Explanation:

By default, users with write access to a repository have the ability to merge pull requests, including those created by Dependabot for security updates. This access level allows contributors to manage and integrate changes, ensuring that vulnerabilities are addressed promptly.

Users with only read access cannot merge pull requests, and enterprise administrators do not automatically have merge rights unless they have write or higher permissions on the specific repository.

NEW QUESTION # 38

Which Dependabot configuration fields are required? (Each answer presents part of the solution. Choose three.)

- A. allow
- B. milestone
- **C. directory**
- **D. schedule.interval**
- **E. package-ecosystem**

Answer: C,D,E

Explanation:

Comprehensive and Detailed Explanation:

When configuring Dependabot via the dependabot.yml file, the following fields are mandatory for each update configuration:

directory: Specifies the location of the package manifest within the repository. This tells Dependabot where to look for dependency files.

package-ecosystem: Indicates the type of package manager (e.g., npm, pip, maven) used in the specified directory.

schedule.interval: Defines how frequently Dependabot checks for updates (e.g., daily, weekly). This ensures regular scanning for outdated or vulnerable dependencies.

The milestone field is optional and used for associating pull requests with milestones. The allow field is also optional and used to specify which dependencies to update.

GitLab

NEW QUESTION # 39

Assuming security and analysis features are not configured at the repository, organization, or enterprise level, secret scanning is enabled on:

- A. Private repositories
- **B. Public repositories**
- C. All new repositories within your organization
- D. User-owned private repositories

Answer: B

Explanation:

By default, secret scanning is enabled automatically for all public repositories. For private or internal repositories, secret scanning must be enabled manually unless configured at the organization or enterprise level.

This default behavior helps protect open-source projects without requiring additional configuration.

NEW QUESTION # 40

.....

Our GH-500 practicing materials is aimed at promote the understanding for the exam. We have free demo for you to comprehend the format of GH-500 exam dumps. After you pay for the GH-500 exam dumps, we will send you the downloading linking and password within ten minutes, and if you have any other questions, please don't hesitate to contact us, we are very glad to help you solve the problems.
